

PRESS RELEASE

Melbourne, Australia – 13 May 2026

Adacel to Exhibit at CANSO Airspace World 2026 with Live Demonstrations of Integrated Portfolio and Latest Innovations

Adacel Technologies Limited (“Adacel”), a global leader in air traffic management (ATM) and air traffic control (ATC) simulation and training solutions, announced that it will exhibit at CANSO Airspace World 2026, taking place May 26–28. Adacel’s largest exhibit of the year will feature live demonstrations spanning air traffic management, digital tower operations, and controller training, **located at stand H2-A38**.

Visitors to the Adacel exhibit will see how the company’s solutions operate as a connected ecosystem, from live operations through to training and validation. Demonstrations will include Aurora, Adacel’s air traffic management system; REVAL, its digital tower solution; MaxSim, its ATC training simulator; and FAST, which enables operational systems to be interfaced directly into training environments.

This year, Adacel will also introduce demonstrations focused on next-generation training methodologies, including gamified learning environments and eye tracking within simulation. These capabilities are designed to support evidence-based training, offering instructors and organizations new ways to assess attention, workload, and decision-making during complex scenarios.

“Operational systems and training can no longer operate in isolation,” said Daniel Verret, CEO of Adacel. “At Airspace World, we are demonstrating how Adacel’s integrated portfolio creates continuity from live operations through system validation and training, while leveraging advanced capabilities such as gamification and eye tracking to deliver deeper insight, measurable performance, and more effective outcomes.”

Adacel’s product and engineering experts will be available throughout the show to meet with ANSPs, airport operators, and industry partners to discuss current and future operational and training requirements.

To schedule a dedicated demo or meeting with Adacel’s team during the event, email info@adacel.com

About Adacel:

Established in 1987, Adacel is a global provider of advanced air traffic control (ATC) simulation and training systems, air traffic management (ATM) systems, and digital tower solutions. The company applies cutting-edge technologies to deliver mission-critical capabilities for civil and military aviation customers worldwide. Adacel's customers include international air navigation service providers (ANSPs), airport authorities, universities and training organizations, and defense and security agencies.

Adacel's MaxSim tower simulation and training systems are deployed at more sites than any other solution worldwide and were the first ATC simulators to introduce virtual and mixed-reality training into the classroom. More than 20% of the world's airspace is managed using Adacel's Aurora ATM systems. Adacel's flagship digital tower platform, REVAL, delivers a comprehensive range of digital tower operational solutions, spanning consulting, system design, development, deployment, and long-term support.
