

Flywheel no.: _____

Date of the sale: _____

Terms of use and warranty conditions.

1. In order for the customer to submit a repeated complaint about the operation of the flywheel to PRORING personnel, the car must be driven a distance of 100 km in normal operation.
2. The customer must understand that the dual-mass flywheel is a wearing-out part. Increased loads (exceeding the maximum load capacity of the car, increasing the power of the car, using the car in motorsports) can reduce the flywheel's lifespan.
3. When installing the flywheel, degrease the work surface of the clutch and make sure that the gearbox is in good condition.
4. When installing new flywheel, PRORING recommends to install a new clutch kit.
5. For the warranty to be valid, you need to make sure that the car's engine is working properly.
6. The warranty is not valid, if the engine power is increased.
7. If the flywheel is suspected to be malfunctioning, the customer must immediately contact the PRORING administration to agree on further actions or the dealer from whom he has purchased the flywheel.
8. PRORING does not reimburse the service costs related to the removal/installation (service work, service materials, etc.) of the flywheel in case of flywheel warranty, unless the complaint about the flywheel occurs within the first ten days after its purchase, in this case PRORING undertakes to carry out the repair under guarantee in its car repair shop at its own expense or to pay for labour costs that have been agreed in advance.
9. The dual-mass flywheel has a **six-months warranty from the date of the sale.**
