

A PPM That Knows Its Own Status

See every project, backed by the data underneath it. Uncountable's PPM lets R&D and innovation leaders plan, prioritize, and govern the whole portfolio on the same platform as the experiments, quality, and production behind it.

Uncountable's AI end-to-end platform is deployed by

The Challenge: Sound Familiar?

Most portfolios are run in tools disconnected from the work they track, so the view is always a step behind.

Manual

Status is typed in by hand, so gate reviews debate opinions, not data.

Stale

Spreadsheets and decks are out of date the moment they are built.

Silent

Stalled projects quietly burn resources, unflagged.

Hidden

Pipeline value and over-commitment stay invisible.

What Uncountable PPM Does

Configurable stage-gates

Capture the go, hold, or kill and resource decision at each gate, with the supporting lab data attached.

Prioritization & forecasting

Score and revenue-forecast the portfolio against strategy, value, and risk, with idea intake to mature ideas into projects.

Resource & capacity planning

By person, role, and lab or instrument, across teams, sites, and programs, with milestones and dependencies.

Live pipeline & roadmap

Portfolio roadmaps and timeline views stay current as programs move, so there is no deck to rebuild before a review.

Stalled-project visibility

Time in stage, missed milestones, and low recent data activity make a quiet project easy to spot, so you can act on the evidence.

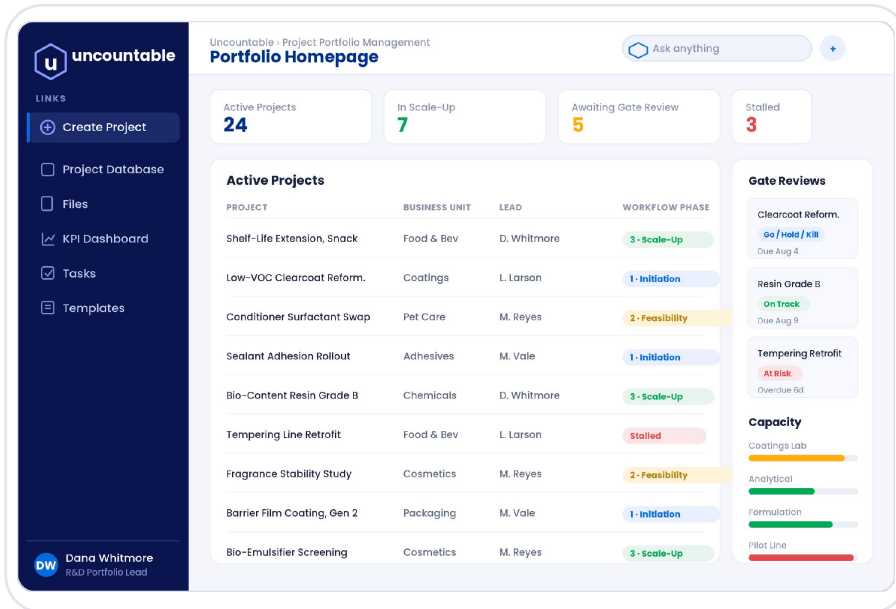

One connected data model

Every project linked to its experiments, formulations, QC, and PLM records, with optional Gen AI assistance.

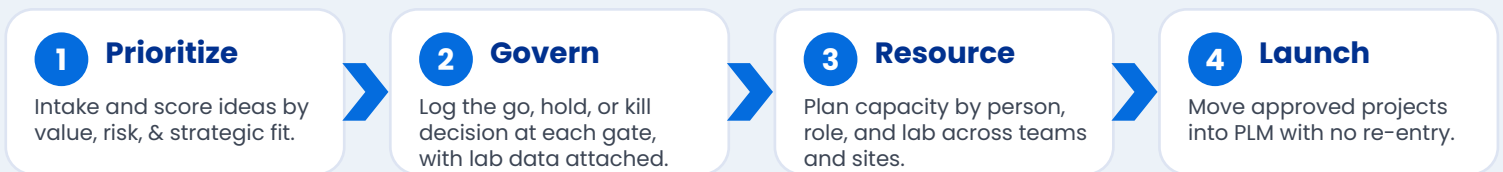

Your Whole Portfolio, Backed by the Data

See every program's stage, resourcing, and pipeline value in one place, drawn from the work underneath.

- ✓ Resource and capacity balanced against real load.
- ✓ Revenue-forecasted, prioritized pipeline.
- ✓ Every project's phase and health at a glance.
- ✓ One portfolio view across teams, sites, and programs.
- ✓ No re-entry from PPM into PLM.

How PPM Works

What Sets Uncountable PPM Apart

Not just PLM

PPM governs which projects to run and how to resource them; PLM manages the product lifecycle. One data model links them.

Status from real data

Project status is derived from the underlying experiments and QC, not typed by hand, so gate reviews run on evidence.

Portfolio rationalization

Kill or consolidate the projects that are not paying off and redirect people and lab capacity on evidence, not politics.

Fits your stack

Connects to your existing project, ERP, and finance systems through a REST API, with migration from spreadsheets.

Portfolio decisions made on evidence, on the same platform as the work they track.

See It on Your Own Portfolio

No slideware, just your workflow. Request a demo at uncountable.com.
