

From First Experiment to Finished Product, on One Unified Platform

Uncountable connects R&D, QC and PLM on one structured data model, so scientists reuse past work and reach targets with fewer experiments.

Deployed by 175+ enterprise teams globally

One Platform, Four Suites

R&D, Quality, Product Lifecycle, and Innovation and Project Management, delivered as four suites on one connected data model.

Research & Development

Design, run, and learn from every experiment, on one platform.

- ELN
- Formulation
- LIMS for R&D
- DOE & Predictive Tools
- Inventory Management

Quality

Release with confidence and stay audit-ready.

- LIMS for Quality
- QMS
- Document Management
- RCA
- Statistical Process Control
- Supplier Quality Management

Product Lifecycle

Take products from concept to commercialization.

- BOM & Formula Management
- Rationalization
- Supplier Management & Registration
- Regulatory Management
- Sustainability & ESG
- Project Portfolio Management (PPM)

Project Management

Scope, gate, and route project work.

- Project Portfolio Management (PPM)
- Project Stage Gating
- Request Management
- Document Management
- Project Ideation

Shared across every suite: Bodie, the Gen AI assistant, and the Uncountable Portal for secure external access.

Fewer Experiments, Faster Launches, Less Rework

Fragmented R&D data means repeated experiments, slow launches, and decisions made on stale numbers. Centralizing it changes the math.

46%

Faster formula reviews

Behr Paint Company

>50%

faster time to market

Sika

~30%

less time reconciling data

Ripple Foods

45%

less design-of-experiments workload

SCG Chemicals

Bodie Works Across Your Whole Platform

R&D, quality, PLM, and project management all share one data model, so Bodie can act on all of it from a plain-language prompt to build visualizations, diagnose root cause, automate workflows with Skills, and summarize projects. Available with the Gen AI module.

What Sets Uncountable Apart

Unified system of record

R&D, QC, PLM, and project management in one platform, not four tools stitched together.

Formulation-native and flexible

Adapt data models and workflows without heavy engineering, built for industries where products change often and variants are common.

Bidirectional instrument integrations

Syncs with ERP & CRM via API; connects to 400+ lab instruments bidirectionally; and an MCP connector for external LLMs and AI assistants

Analysis where the data lives

Built-in visualizations, live SPC, and reporting on the same records as your experiments, so insight never requires an export.

Real AI, foundational

Models built by ML researchers, the Bodie assistant, and an MCP connector that opens your structured data to external AI tools.

Security & compliance, built in

SOC 2 Type II, ISO 27001, and GDPR; 21 CFR Part 11 and EU Annex 11 support for regulated (GxP) deployments; data isolation between clients.

Most systems store the answer. We store the evidence.

See It on Your Own Data

Book a personalized demo and we'll show you how Uncountable applies to your lab.
