

From formulation to cure, in one connected record

Manage formulation, process, and performance for adhesives and sealants, where the process is the product. Every formulation keeps its process context from first trial to scale-up.

Uncountable's AI end-to-end platform is deployed by 175+ teams globally

What holds at the bench holds at scale

For adhesives and sealants, substrate, mix, and cure profile decide whether a bond holds. Uncountable keeps all three with the recipe, so scale-up confirms what the lab already proved, and reformulating for a new substrate starts from what you already know, not from zero.

"What really sets Uncountable apart is the people. Their team works like an extension of ours: high-touch, deeply technical, and genuinely invested in getting us to value quickly. The support and partnership among the best we've experienced from a software provider."
Chris Albernaz, CTO, Teknor Apex

Formulation and process, captured together

Formulation and process together

Mix, cure profile, and order of addition captured with the recipe.

Performance and QC linked

Substrate and bond-strength results sit with each formula.

Structure-process-property history

Surface relationships across hundreds of past recipes.

Context carries to scale-up

What held in the lab holds on the line.

Find the right mix faster

Design of experiments narrows in on the mix, not one variable at a time.

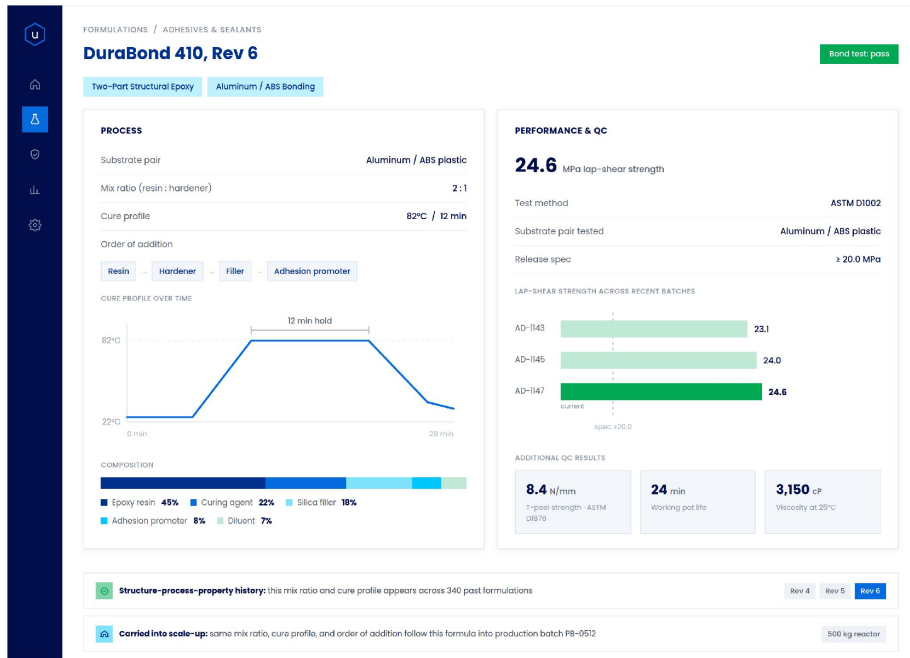

Root cause, not guesswork

Trace a failed bond to the formulation, batch, and test data behind it.

From new substrate to production bond

The process context travels with the recipe, so scale-up confirms rather than surprises.

A formulator records an adhesive with its full process context

Mix, order of addition, and cure profile link to the recipe

Substrate and bond-strength results attach to the same record

Reformulating pulls history across hundreds of past recipes

The winning formula carries its context into scale-up

What sets Uncountable apart for adhesives & sealants

Cure conditions are data

Mix and cure are first-class fields, not a note in a notebook.

Scale-up that holds

Lab success survives the move to production.

Reuse instead of restart

Reformulating for a new substrate begins from what you already know.

One connected record

R&D, quality, product lifecycle and product management on a single data model.

1

Connect your data

Bring in existing formulations and batch records, no re-entry.

2

Configure to your process

Set fields and workflows to match how your team already works.

3

Go live

New formulations capture process and performance data together.

Ready to see your own formulations this way?

See it on your own formulations

No slideware, just your workflow. Request a demo at uncountable.com.
