

See every sampling point on your own site map

ENVIRONMENTAL MONITORING

Uncountable connects monitoring areas, sampling points, sampling plans, and samples in one platform, on the desktop and on mobile devices.

AREAS AND POINTS

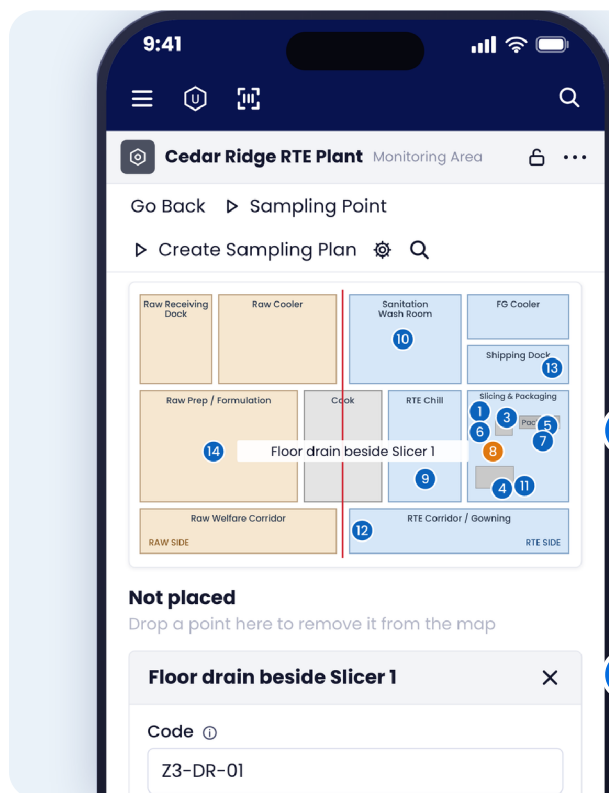

Upload a floor plan as the site map of an area, then place numbered sampling points where your teams take samples.

MOBILE DEVICE OR COMPUTER

Capture work from a mobile device or a computer. Scan sample barcodes with the device camera, take photos into the record, and open the links that your admins pin for mobile.

BODIE AI AGENT

Ask Bodie AI Agent to search your records by keyword, read the details of a record, and query your data with a link to the full results.

MONITORING AREA

The site map on a mobile device

- 1 Site map**
Numbered sampling points sit on the floor plan of the area.
- 2 Point record**
Select a point to open its record, with its code, name, and parent location.

CLASSIFICATION SCHEMES

EU GMP Grade A to D

ISO 14644-1 Class 5, 7, 8

Food hygienic Zone 1 to 4

Screenshot of a monitoring area in Uncountable.

THE UNCOUNTABLE PLATFORM

Uncountable's AI-native end-to-end platform is deployed by 175+ product development teams.

HOW IT WORKS

From site map to sample, in one connected record

Define where you sample, plan when you sample, and capture the work at the point. Each sample links back to its point, so the history of every location stays in one place.

Areas and sampling points

Model each site as areas that hold numbered sampling points. Each location carries a code and a lab.

Site maps

Upload a floor plan, click to place a point, and drag it to move it. Select a point to open its record beside the map.

Cleanroom and hygiene classes

Classify an area by EU GMP grade, ISO 14644-1 class, or food hygienic zone. Points take the class of their area.

Sampling plans

Set a daily, weekly, monthly, or yearly frequency and pick the points on the map. The plan schedules sampling events on the calendar.

Samples created for you

Each sampling event creates a lab request and a sample for each selected point, linked to the point, the plan, and the event.

At rest or in operation

Cleanroom samples record the occupancy state, at rest or in operation, from the default of the plan.

Scan with the device camera

Scan sample barcodes and QR codes from Quick Actions or the mobile navbar. Print labels as Code 128, DataMatrix, or QR codes.

Photos from the floor

Take a photo into a record from a computer or a mobile device, or scan a QR code to pair a mobile device and upload from it.

Signed and traceable

Signatures need the signer's PIN, and each record keeps an audit log. E-signatures are aligned to 21 CFR Part 11 and EU Annex 11.

Example: a weekly cleanroom round

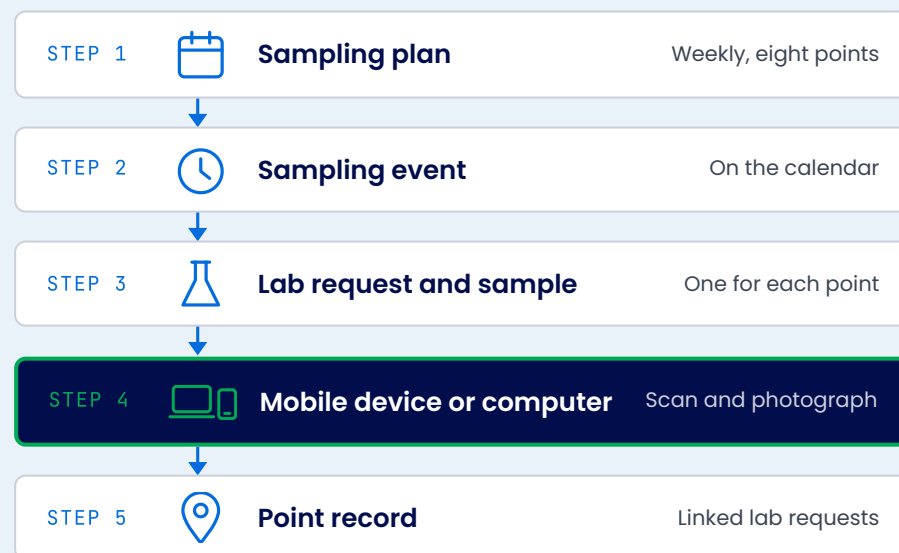

A microbiology team runs a weekly plan for the eight points of a Grade B filling suite.

SCHEDULED EVENT

The weekly sampling event for the filling suite starts.

RESULT

Each of the eight points gets a lab request and a sample, ready to label, scan, and test.
