Compliance checked in the recipe

Ingredient regulations are checked as the formula is built, not after it. Uncountable maintains its own regulations database, kept up to date from the official sources, so your team never maintains regulations manually. Every recipe shows a pass or fail for each market you sell into.

Screening arrives after the work is done

Regulatory screening usually sits in a separate system, run in batches by someone other than the formulator. Directions that were never viable get developed for weeks, and the answer arrives too late to change what was worth trying in the first place.

What the formulator sees

Pass or fail, shown inline

Formulators see the status for every market on the recipes page as they build.

Every row carries its citation

Jurisdiction, product category, permitted level, a pinned link to the official source, and the date it was last checked.

House interpretations that hold

Admins edit or override any row, and re-pulling a source will not overwrite that edit.

Every market checked at once

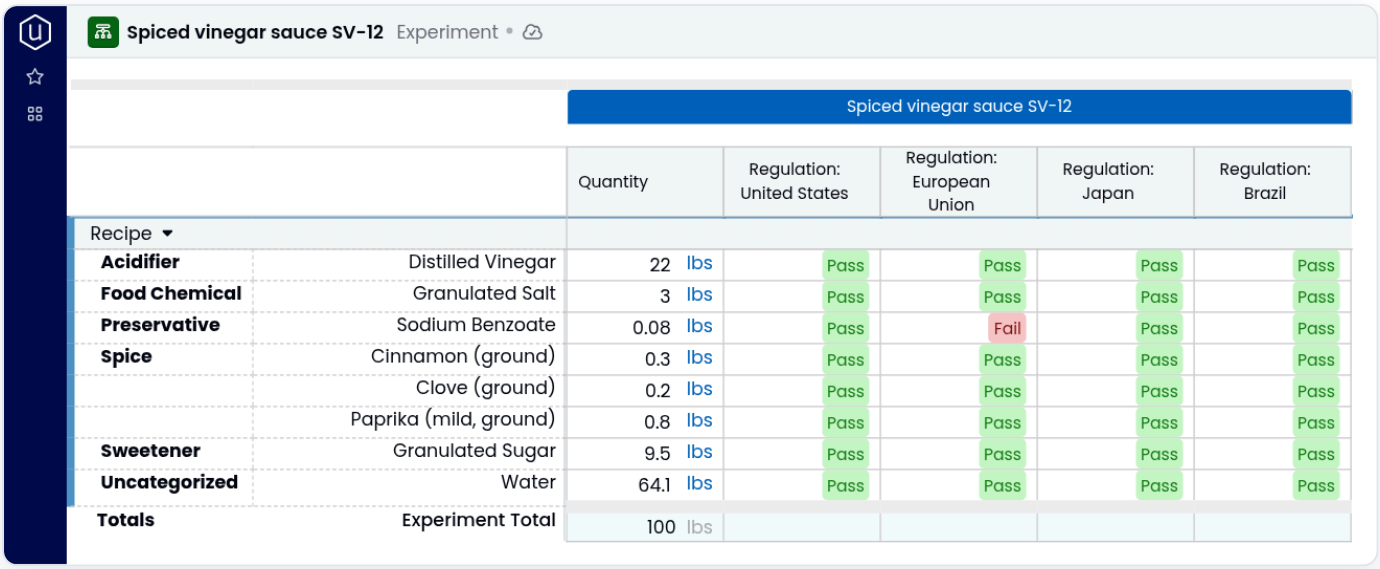

One column per market, so a fail in one market is visible immediately.

Uncountable's AI end-to-end platform is deployed by 175+ teams globally

From ingredient to checked recipe

Uncountable maintains its own regulations database and keeps it up to date from the official sources. Your team never maintains regulations manually.

Spiced vinegar sauce SV-12

		Quantity	Regulation: United States	Regulation: European Union	Regulation: Japan	Regulation: Brazil
Recipe						
Acidifier	Distilled Vinegar	22 lbs	Pass	Pass	Pass	Pass
Food Chemical	Granulated Salt	3 lbs	Pass	Pass	Pass	Pass
Preservative	Sodium Benzoate	0.08 lbs	Pass	Fail	Pass	Pass
Spice	Cinnamon (ground)	0.3 lbs	Pass	Pass	Pass	Pass
	Clove (ground)	0.2 lbs	Pass	Pass	Pass	Pass
	Paprika (mild, ground)	0.8 lbs	Pass	Pass	Pass	Pass
Sweetener	Granulated Sugar	9.5 lbs	Pass	Pass	Pass	Pass
Uncategorized	Water	64.1 lbs	Pass	Pass	Pass	Pass
Totals	Experiment Total	100 lbs				

1. Uncountable maintains its own regulations database, kept up to date
2. You select the markets you sell into
3. Ingredients map to the rules for that product category
4. Every recipe is checked, inline on the recipes page
5. Kept up to date from the official sources, and every row is dated

Where this differs from a screening tool

The check runs where the work does

Status sits on the recipe being built, rather than in a tool alongside it.

Limits scoped to the product category

A permitted level is matched to what you are making, not to the ingredient alone.

Kept up to date for you

Uncountable maintains its own regulations database from official sources, so nobody on your team updates limits manually.
