Run each batch step by step and catch errors as they happen

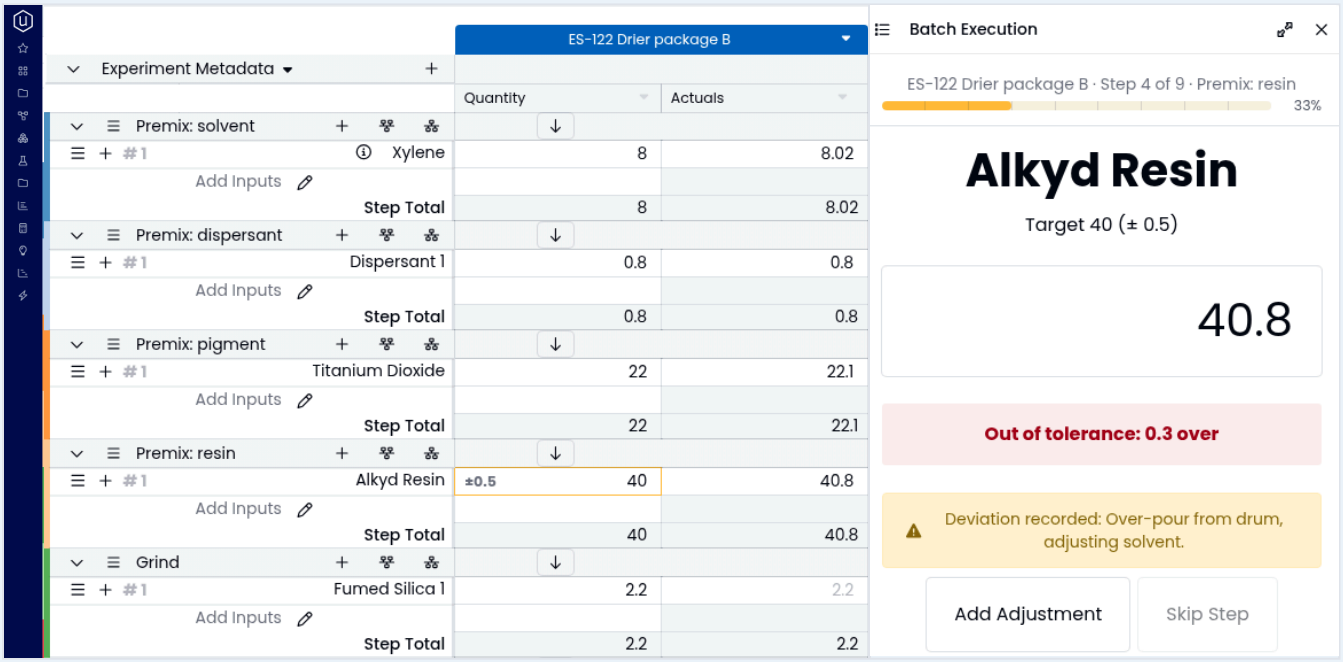

Batch execution mode in Uncountable puts the batch record on the floor. Each value, deviation and step completion saves to the batch as it happens.

Paper batch records find problems too late

A wrong charge or a failed result often shows up only when the paper record reaches the LIMS, and exceptions arrive with no reason or sign-off. Uncountable flags an out-of-window charge or out-of-spec result as it is entered.

BATCH EXECUTION · DEMO DATA

A charge outside its window stops the run

1 · Open
From the recipe Tools menu or a saved view.

2 · Charge
The actual can come from a scale or typed entry.

3 · Test
QC results show in or out of spec.

4 · Close
In this view, close waits for every step and release.

- Caught while it can be fixed
- Reason saves with user and time
- Add Adjustment inserts a fix step

Each exception carries a reason, and each release an approver signature

Paper relies on someone noticing the exception. Uncountable stops the run until a reason is recorded, and releases wait for a signature.

Signed releases
Approvers can release each deviation with a signature.

Alerts from the run
A deviation can notify QA by notice or email.

Fixes stay on record
Add an adjustment step and a re-test sample.

One batch or a queue
Work one batch, or step through many.

Lot set by scan
A scan sets the lot, warns on wrong material.

Ask Bodie who changed it
Bodie, the AI agent, reads each batch's change history.

WORKED EXAMPLE · ILLUSTRATIVE DEMO DATA

A viscosity result out of spec after thindown

Out of spec
104 KU against 90 to 100 KU.

Reason
Recorded: the thindown solvent was short.

Fix and re-test
An adjustment step adds solvent, then a re-test.

Release
97 KU on re-test. An approver signs the release.

- The fix sits on the batch record
- QA sees who released it

Replace paper with a record built as the work happens

Bring one paper batch record and see it as steps and checks.
