

# VIZONE VISIBLE

See Beyond Obstacles.  
Reduce Road Uncertainty.

We turn smartphones, wearables, vehicles and infrastructure into an intelligent, proactive safety network that sees and communicates before accidents happen.

## OVERVIEW

**Visible Zone** transforms smartphones, wearables, vehicles and infrastructure into an intelligent, proactive safety network that enables them to see and communicate with one another before accidents occur.

Launched as an SDK with a clear roadmap to mobile OS and device platform integration, it delivers real-time awareness, contextual understanding and predictive intelligence.

Using long-range, direct, event-based communication, independent of cellular networks or cloud infrastructure, the platform detects pedestrians, cyclists, scooter riders, workers, and hidden hazards, even behind obstacles, beyond the line of sight or in poor visibility and adverse weather. It facilitates seamless bidirectional warnings between people, vehicles and infrastructure.

Designed for mobility, smart cities, airports, seaports, industrial sites and public safety, Visible Zone powers advanced collision avoidance and disaster rescue while protecting privacy through localized, temporary, event-based messaging.

## KEY BENEFITS

See Beyond Obstacles

Reduce Road Uncertainty

Real-Time Awareness and Prediction

No Cellular or Cloud Dependency

Privacy by Design

One Platform, Multiple Safety Use Cases

Software-only SDK for existing apps

# One Platform, Multiple Safety Use Cases

Software-only SDK for existing apps, with a clear roadmap to deeper mobile and device platform integration.

## WHERE IT WORKS

### MOBILITY

Protect drivers, pedestrians, cyclists, scooter riders and other vulnerable road users.

### SMART CITIES

Turn city apps, infrastructure and connected devices into a proactive safety layer.

### AIRPORT & SEAPORT SAFETY

Improve awareness in closed compounds, operational areas and complex traffic zones.

### PUBLIC SAFETY

Support disaster rescue, incident awareness and hidden-person detection in critical events.

## HOW IT WORKS

### 1 AWARENESS

Real-time detection of nearby users and hazards.

### 2 UNDERSTANDING

Contextual interpretation of movement and risk.

### 3 PREDICTION

Anticipates dangerous situations before accidents happen

### 4 ADVERTISE

Deliver timely alerts and messages to the right people, at the right time.

## WHY VIZIBLE ZONE

Long-range direct event-based communication

No cellular or cloud dependency

Bidirectional warnings between people, vehicles and infrastructure

Detects hidden hazards beyond line of sight and in poor visibility

Privacy-by-design with localized, temporary event-based messaging

Fast deployment through a software-only SDK

## MEET US AT THE CONFERENCE

Ask about pilots, partnerships and investment opportunities.
