VISUAL PICKING AIDS

These aids reduce the chance of operator error by making the picking and filling process more efficient and precise.

LED BAR

The LED bar is installed on the upper part of the operator bay, in a clearly visible position. When a specific segment of the bar lights up, this indicates clearly and precisely the section of the tray involved in the picking/refilling operation. By indicating the position of an item on the tray's X axis (width), the operator can quickly identify the correct compartment, reducing errors and picking time.

Price List:

MODEL	OPTION	
MA & MA-D (INT/EXT)	X-Axis LED Bar	
MC & MC-D (INT/EXT)		
MX & MX-D & MX-DD (INT/EXT)		
ML & ML-D & ML-DD (INT/EXT)		
MX & MX-D & MX-DD (EXT)		

ALPHANUMERIC BAR

In addition to the characteristics of the LED bar, this device can also provide other information on picking and refilling operations, such as: quantity, code, description of the items to be picked/ refilled and their position on the tray's Y axis (depth), using a system of coordinates.

Price List:

MODEL	OPTION	
ME & ME-D (INT)	X-Axis Alphanumeric Bar	
MA & MA-D (INT/EXT)		
MC & MC-D (INT/EXT)		
MX & MX-D		
ML & ML-D		
MA & MA-D (INT/EXT)		
MC & MC-D (INT/EXT)		
MX & MX-D		
ML & ML-D		

LASER POINTER

Using a 2-axis pointer, the laser selects material using holographic laser lines.

The **red pointer marks** the material along the x-axis (width) and the **green spot marks** the product location on the y-axis (depth).

Price List:

MODEL	OPTION	
ALL MODELS	Laser Pointer	

USER AUTHENTICATION

BADGE READER

This magnetic badge reader makes machine access easier. It allows the operator(s) to use their personal badges to access the machine and prevents any unauthorized users. The reader connects directly to the Copilot console via USB port.

N.B.: Access Cards/Badges are not included with purchase.

Price List:

MODEL	OPTION	
ALL MODELS	Badge reader	

RFID READER

In order to use this option, Modula WMS software needs to be installed.

Minimum requirement: Base Module package (or greater). The badge reader with built-in RFID technology can be connected directly to the Copilot operator console via the USB port on the Copilot. The badge reader, for user login, is useful if clients wish for a higher level of security when an operator gains access to the machine.

All the operator needs to do to access the system is swipe their ID card. This prevents access by unauthorised operators, which can be gained if standard methods of access are used. This system can add an extra level of security to access using a password. The RFID reader does not require any software to be installed; instead, it can quickly be fixed to any surface – or even just to a shelf – for maximum resistance and reliability.

NB: The cards to be used in conjunction with the badge reader are not included in the delivery of the optional badge reader package.

Price List:

MODEL	OPTION	
ALL MODELS	RFID Reader	

EKS READER

Perfect for industrial applications, the Electronic Key Reader (EKS) has a sturdy structure and an IP67 protection rating. The key itself is equipped with a memory chip and transponder; and can be programmed using dedicated software.

The advantages are the same as those with the Badge Reader, but adds the benefit of automatic control logout when the key is removed from the reader.

The device is fitted with an Ethernet interface for connections to control PC which Modula WMS is installed.

N.B: EKS keys are available separately for purchase from Modula.

Price List:

MODEL	OPTION	
ALL MODELS	EKS Reader – Ext bay	
	EKS Reader – Int bay	
	EKS Key - Red	
	EKS Key - Black	
	EKS Key - Blue	
	EKS Key - Green	
	EKS Key - Yellow	

OPTIONS FOR ORDER PREPARATION

PUT TO LIGHT

Put to Light solutions are **the best choice for order preparation when a fast, intuitive, scalable and error-free process is required.**

In a Put to Light system, the displays visually guide the operator to the locations in which the items for each order must be put.

Each location or bin assigned to an order includes a luminous display.

Sorting is carried out by item. Once an item has been identified, the displays visually indicate to the operator the bin in which it must be placed and the quantity required for each order.

The Modula WMS software that manages the Put to Light system allows the implementation of different picking strategies, including batch picking or multi-order.

Price List:

MODEL	OPTION	
ALL MODELS	Put to Light	

PICKING STATION

A picking station is fixed, complete and modular, equipped with various picking positions. It is made of a sturdy painted steel structure, shelves to support the bins and a number of Put to Light displays with relative controller/power supply.

The modules can be coupled to allow the expansion of the station for those who need to process many orders simultaneously. Intermediate modules are also available for the installation of monitors, label printers, barcode readers or other accessories.

The system must be equipped with the Modula WMS software.

Price List:

MODEL	OPTION	
ALL MODELS	Picking Station	

PICKING CART

A picking cart is a mobile, complete and modular station, equipped with various picking positions.

It consists of a painted steel trolley equipped with 4 pivoting wheels for easy maneuverability, shelves for bins, a certain number of Put to Light displays with relative controller, power/backup batteries and WiFi system for wireless connectivity.

The system must be equipped with the Modula WMS software.

Price List:

MODEL	OPTION	
ALL MODELS	Picking Cart	

OPTIONS FOR INCREASING PRODUCTIVITY

COUNTING SCALE

An ideal tool for counting the number of objects based off of unitary weight.

The counting scale can quickly measure precise amounts of small objects (bolts, nuts, screws, etc). Scales can be supplied with a single plate with load capacities of 3/6/15/30/60 Kg or with a double plate combination of 3 & 15 Kg or 6 & 30 Kg.

Price List:

These models of counting scales can be inserted in every Modula model.

MODEL	RESOLUTION	PAYLOAD	CODE	
3 kg	0,1 g	3 kg	70001528	
6 kg	0,2 g	6 kg	70001529	
15 kg	0,5 g	15 kg	70001880	
30 kg	1 g	30 kg	70001881	
60 kg	2 g	60 kg	70000541	
3 kg + 15 kg	0,5 (3 kg) - 2 (15 kg)	3 kg + 15 kg	70006029	
6 kg + 30 kg	1 (6 kg) - 5 (30 kg)	6 kg + 30 kg	70006030	

LABEL PRINTER

This is used to print customised sticky labels and posters with information on stored material.

During picking and refilling operations in Modula warehouses, the operator can enter the required information via the Copilot console and print it instantly onto labels to be attached directly to the boxes and packets or to identify the goods.

Price List:

MODEL	OPTION	
ALL MODELS	Label Printer Zebra ZT230	
	Label Printer Zebra GK42	

BARCODE READER

The barcode readers are often used when the items being picked from or refilled into the warehouse have complex codes and are difficult to distinguish. The use of barcodes improves picking accuracy and ensures that the operator selects the right materials. Barcode readers can also be used to confirm orders and/or perform a user login. The barcodes offered are wireless and can therefore easily be taken anywhere.

Price List:

MODEL	OPTION	
ALL MODELS LIFT	Barcode Reader Datalogic Gryphon GBT4500* Bluetooth (1D)	
	Barcode Reader barre Datalogic Powerscan 9500* (2D)	
ALL MODELS SLIM	Barcode Reader Datalogic Rida DBT6400 Bluetooth (1D/2D)	

*Stand not included

SLIDING CONSOLE

The Sliding Copilot Console lets the operator move the touch screen copilot along the length of the picking bay. This makes every operation easier, comfortable, more efficient, and saves the operator walking time.

Price List:

MODEL	OPTION	
MA & MA-D	Sliding Console	
MC & MC-D		
MX & MX-D		
ML & ML-D		

MODEL	OPTION	
MA & MA-D	Heavy Duty Sliding Console	
MC & MC-D

ML & ML-D		

BAY OPTION

AUTOMATIC AND MANUAL DOOR

The automatic door is a motorised device that offers the following advantages:

- Greater security for the materials stored, as they are not accessible when the machine is switched off or unattended.
- Reduced noise in the operator area.
- Fewer pollutants from the outside environment can enter the machine.

The automatic door is mandatory for some specific configurations (dual internal bay or displaced bays) in order to guarantee operator safety.

For Lift technologies, an automatic door is available; for Slim technologies, however, a door with manual closure can be used.

Price List:

TROLLEY

Available for the Lift and Sintes1 machines with internal bay, this device allows the operator to fully extract a tray from inside the machine, transfer it on to a mobile “Trolley” and transport it around the production unit.

It can be used for trays with maximum payload of 500 kg and standard height off the ground (700 mm).

Price List:

TELESCOPIC BAY

The Telescopic bay is a device used for extracting trays. It's available for internal bay Modula Lift machines (height from ground 700mm) and is installed at the first delivery level. Once the tray is located in the bay, the operator can manually pull it out and load heavy materials into it.

For trays rated 500, 750 and 1.000 kg the telescopic bay is fitted with support feet with wheels to make it easier to extract heavy loads. Versions with support feet cannot be installed where there is a displaced bay due to the gap between the Modula and the operator workstation.

Price List:

MISCELLANEOUS

END PICKING BUTTON

Used to signify the completion of an order, the End Picking Button provides a practical alternative to the Copilot Console. It must be placed within 10 meters of the machine. The button is independent and does not require hardware modifications to the bay.

Price List:

MODEL	OPTION	
ALL MODELS LIFT	End Picking Button	

FOOT BAR TASK COMPLETE

Located on the ground in front of the bay, completed picking operations can be confirmed with just a tap of the foot. This allows for hands-free operation.

Price List:

MODELS	BAY	CODE	
MX-ML	INTERNAL	1M004689	
MX-ML	EXTERNAL	1M004718	
MA-MC-ME	INTERNAL	1M004697	
MA-MC-ME	EXTERNAL	1M004719	

EXTERNAL BAY LIGHTING

Supplemental LED light fixtures can be installed above the picking bay.

The LEDs switch on when the tray is in the picking bay, illuminating the stored material for a better operator's view. The Copilot Console can set the duration of the lights and other requested lighting configurations.

Price List:

MODEL	OPTION	
MA & MA-D		
MC & MC-D		
MX & MX-D		
ML & ML-D		

ESD PROTECTION

Warehouses can be fitted with an "ESD" (Electro Static Discharge) protection system, which can help protect against any electrostatic charges accumulated during operation.

The ESD protection system ensures that the operator area in the bay is effectively protected. The system is equipped with three mobile connection points and one fixed connection point, which all connect to an appropriate grounding point that has a total resistance of 1MΩ (ome- ga symbol). The ESD protection system provides special tray contacts that are installed on the left-hand side of the bay. The incoming tray comes into contact with these points before reaching the operator. The tray contact points are connected to the system's EBP (grounding point), providing a total resistance value of: 1MΩ. In this way, between the operator antistatic wristband connection to the EBP (grounding point) and the tray connection via the tray con- tact points to the EBP (grounding point), any accumulated electrical charges are effectively dissipated in order to prevent serious damage caused by static electricity.

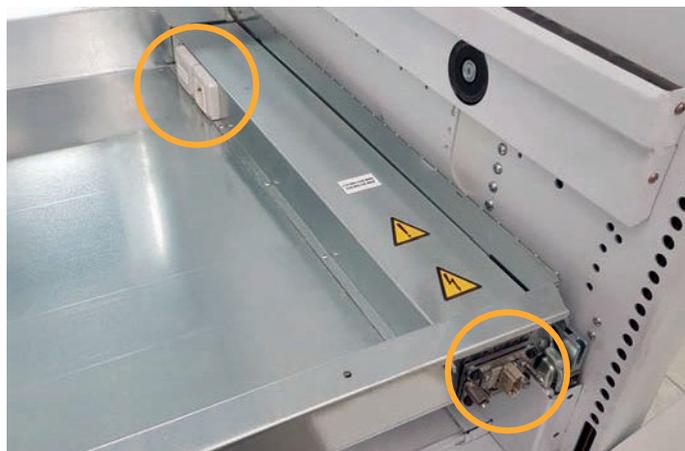

Price List:

MODEL	OPTION	
ALL MODELS LIFT	ESD Protection (single bay)	
	ESD Protection (dual bay)	
SLIM 1.3	ESD Protection (single bay)	
SLIM 1.9		
SLIM 2.5		

ELECTRIFIED TRAY

Allows for the trays to be powered so that any materials requiring electric supply (e.g. rechargeable lamps, computers, radios, etc.) can be used. Comes with a 240 V supply. There is a 10 tray installation limit on each machine.

Price List:

To be defined in base of the configuration.

*Only available on Lift models.

ROBOT INTERFACE

Modula warehouses can interface with anthropomorphic robots using a “Robot interface kit” installed on the electrical panel for handling of electrical signals (3 from Modula to Robot, 2 from Robot to Modula).

Modula WMS software includes an interface that uses a software communications protocol based on direct memory access to the robot’s PLC (Siemens PLC only) or socket server mode.

Price List:

MODEL	OPTION	
ALL MODELS LIFT	Robot Interface	
ALL MODELS SLIM		

* 664.40 fee includes only Robot Interface Kit electrical cabinet predisposition. SW customization and onsite visits are not included.

MODULA GREEN

Installed between the machine's main switch and the electrical panel, this device converts kinetic energy (from the descending elevator) into electricity, feeding back into the grid and improving the process's environmental sustainability.

Price List:

MODEL	OPTION	
ALL MODELS LIFT	Modula Green	

SINGLE-PHASE POWER SUPPLY

A single-phase power supply is an electrical transformation device consisting of an electrical panel that allows you to convert the 230 Vac single-phase main power supply into 575 Vdc and 440 Vac power supplies.

This allows the machines to be installed and operated according to specifications – even in situations where a three-phase 400 Vac power supply is not present.

The device cannot be installed after machine installation; therefore, it must be purchased at the same time as the machine on which it is to be installed.

Price List:

MODEL	OPTION	
ALL MODELS LIFT & SLIM	Single-Phase Power Supply

TRAY ACCESSORIES

To best suit the client's needs, the trays can be equipped with slotted partitions and plain wall dividers that separate the tray into individual compartments. For Lift and Sintes1 models, side wall extension options are also available to increase the tray's overall height. Available for all Modula Lift and Sintes1 models.

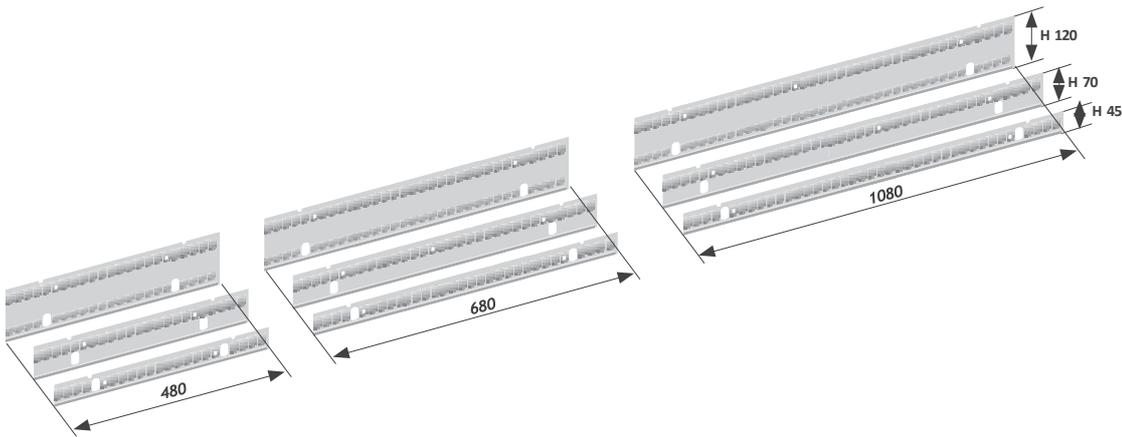

1. Slotted tray wall (Width)
2. Slotted tray wall (Depth)
3. Partition (Width)
4. Divider (Depth)
5. Tray side Extension (Width)
6. Tray Wall Height (Depth)

LIFT TRAY SLOTTING PROFILES

Modula Lift trays may be purchased with either plain, smooth perimeter walls or with slotted perimeter walls. Slotted perimeter walls are equipped with slotted profiles on 20 mm increments to allow for adjustable partitions and dividers to be used as desired. A slotted tray is simply a plain wall tray that has “slotted profiles” installed around the perimeter of each tray’s walls. The slotting profiles are easily installable at any time. Below there is an image and accompanying table showing the slotting profile length and heights available.

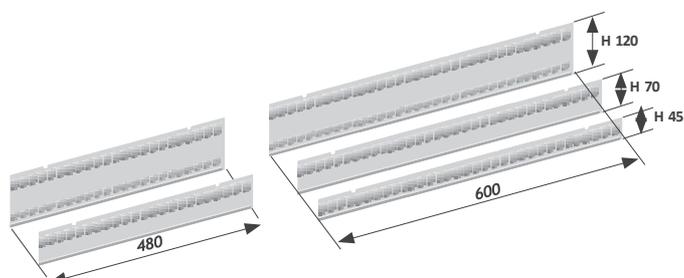

TRAY SLOTTING PROFILES SHORT SIDE:

TRAY WALL HEIGHT	TRAY DEPTH		
	654 mm	857 mm	1.257 mm

LIFT Slotted partitions

The slotted partitions offer the customer the opportunity to divide the tray along the Y axis. These are as long as the depth of the tray and have different heights, as shown in the table below. They are sold in batches of 50, 40, 30, 25 depending on their size.

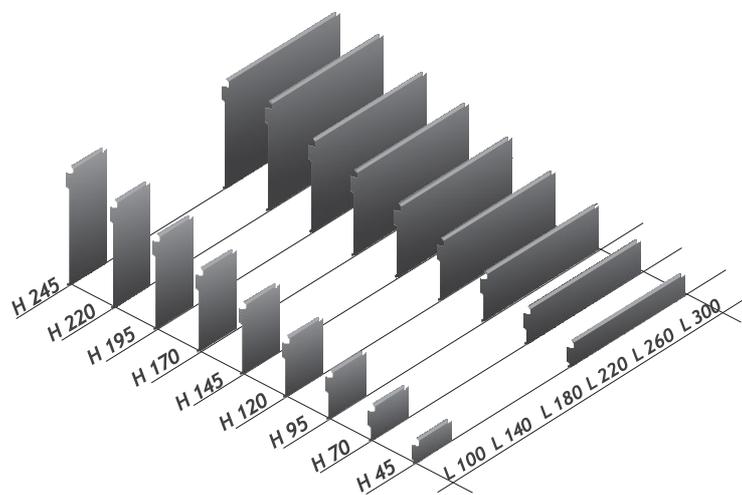

Price List:

The partitions are sold in groups of 50, 40, 30, 25 according to their dimensions.

LIFT tray side wall extensions

Modula Lift trays can be equipped with side wall extensions. This solution helps keep tall and/or loose items from falling out of the tray. The extensions can be easily installed into any existing Modula Lift tray and may be added at any time.

The maximum height of the tray side wall extensions (C) must not exceed 245 mm, total height, including the side wall height (A) and the extension height (B).

To achieve the desired overall sidewall height (C), it is recommended that the perimeter walls (A) of the tray are as tall as possible and then the side wall extensions (B) will be installed to complete the desired height.

SLIM TRAY OPTIONS

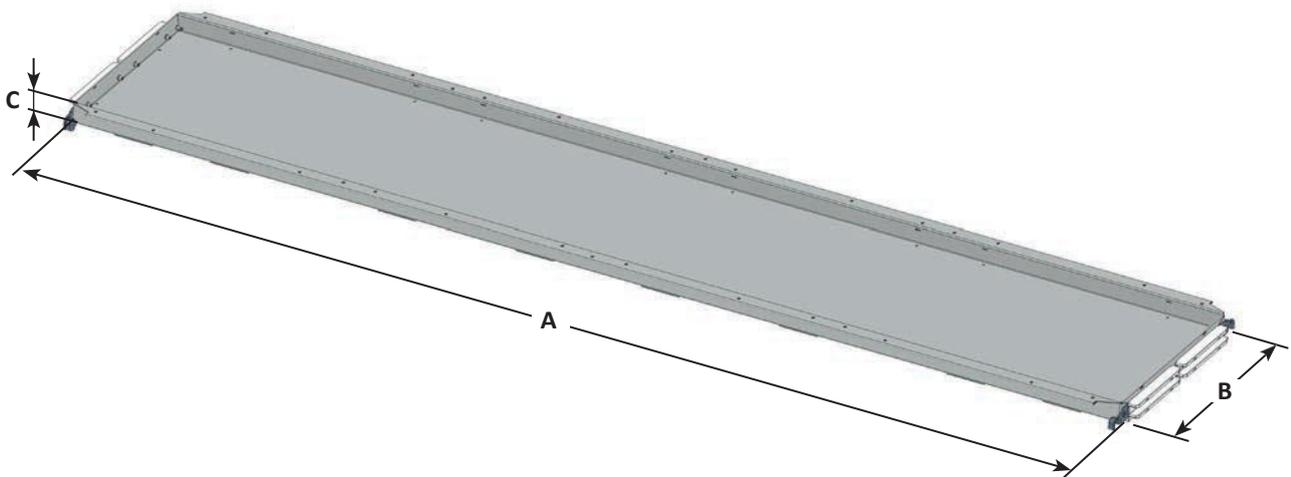

SLIM

The Slim range is made up of various models differentiated by tray width.

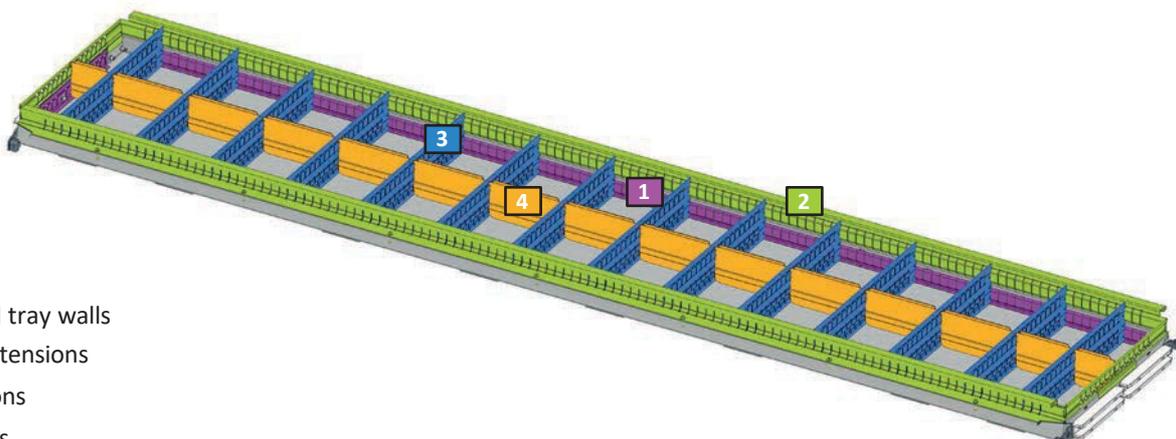

Models available: **Slim 1.3 - Slim 1.9 - Slim 2.5.**

MACHINE MODELS AND STANDARD TRAYS

		SLIM 1.3	SLIM 1.9	SLIM 2.5
(A)	Tray width	1300 mm	1900 mm	2500 mm
(B)	Tray depth	425 mm		
(C)	Tray wall height	45 mm		
	Tray payload	350 kg		
	Unladen tray weight	13,4 kg	19,0 kg	27,8 kg

The trays can be equipped with a variety of options (purchased separately) to subdivide into compartments.

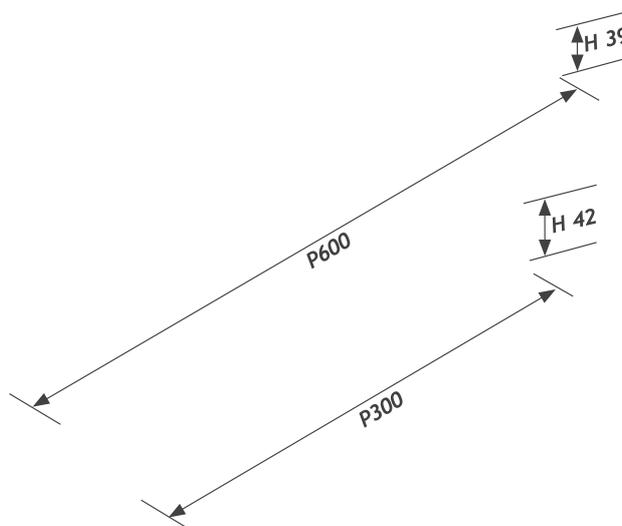

- 1 Slotted tray walls
- 2 Tray extensions
- 3 Partitions
- 4 Dividers

SLIM - TRAY SLOTTING PROFILE

Modula Slim trays may be purchased with either Smooth Side Walls or Tray Slotting Profiles installed.

The slotting profiles are easily installable at any time and outfit plain trays perimeter.

The perimeter walls are equipped with slotted profiles on 20 mm increments to allow for adjustable partitions and dividers to be used as desired. The slotting can be removed if not needed.

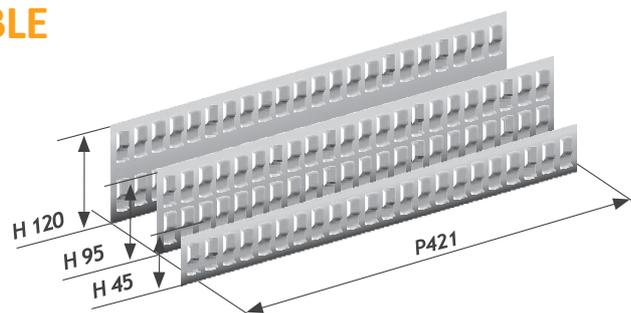

Price List: SLIM TRAY SLOTTING PROFILE

MODEL	TRAY HEIGHT (mm)	CODE
