

**Many professionals still don't know rack-level fire suppression is even possible.**

Compartment-level fire protection is already becoming part of modern data center design.

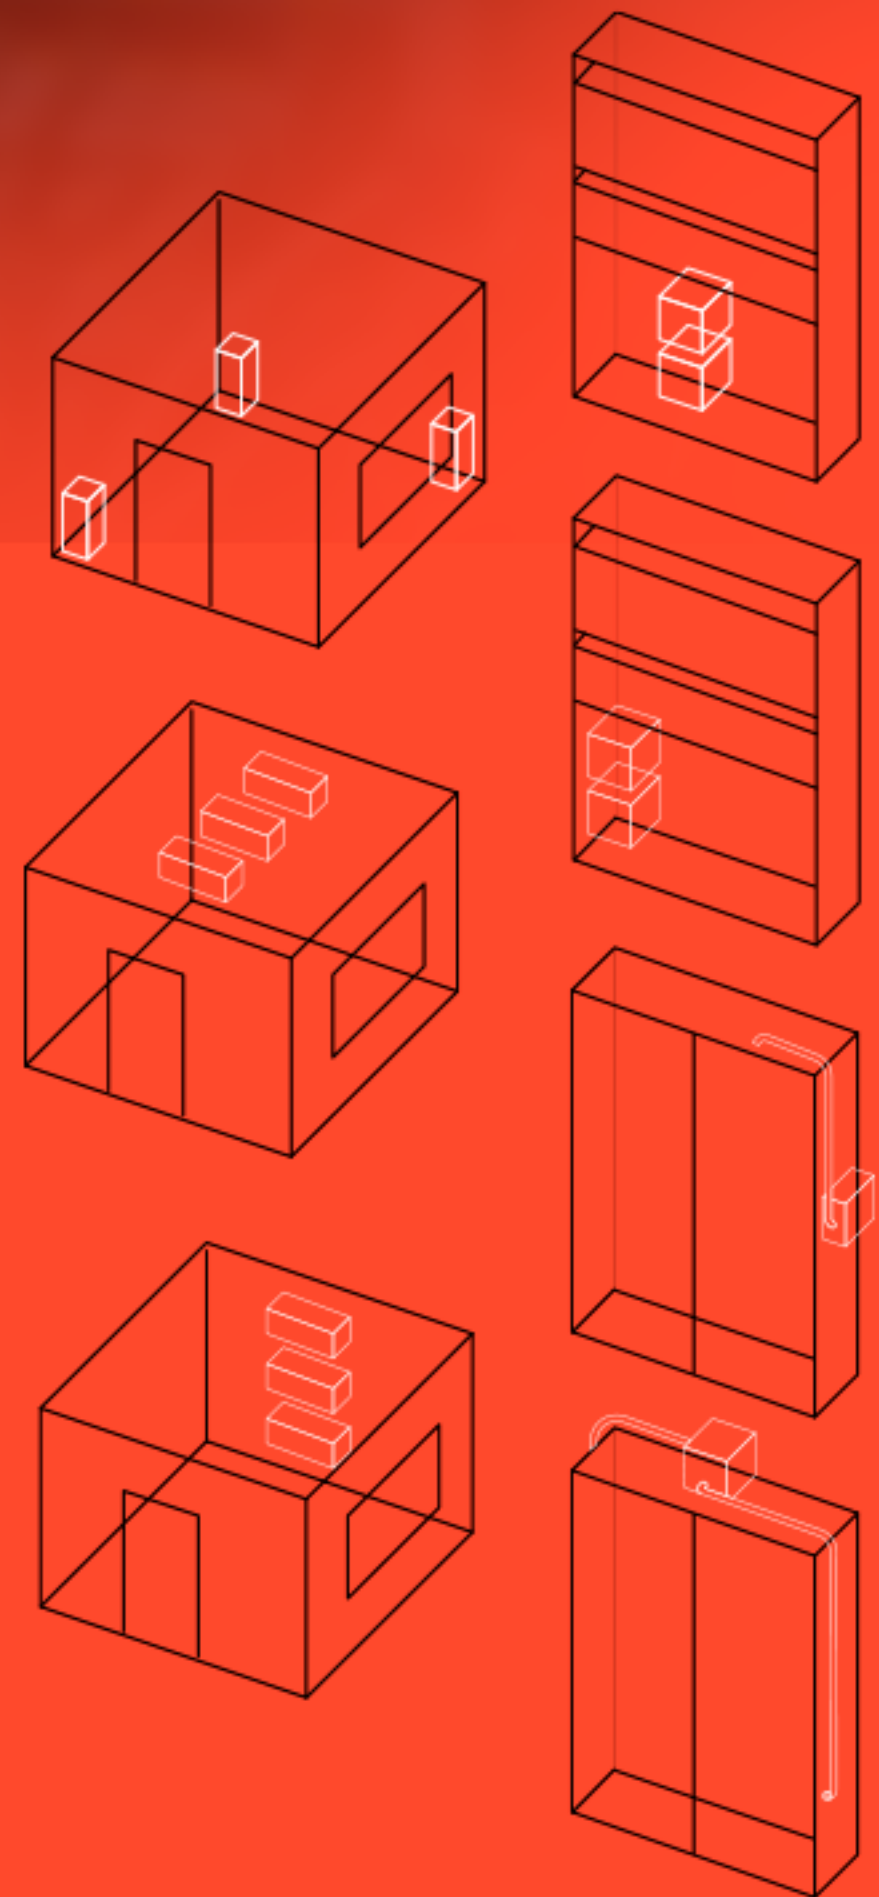

# Protection is moving closer to the risk.

Instead of protecting only the room, modular systems allow protection inside the infrastructure itself.

**Localized suppression helps contain incidents before they spread across critical environments.**

- Rack-level zones.
- UPS compartments.
- Battery cabinets.
- Technical enclosures.

# N2 Gen generates pure nitrogen directly at the source.

- Modular architecture
- Scalable
- Retrofittable
- No high pressure cylinders
- Flexible integration
- Pure Nitrogen
- Rack-level capable
- Residue-free
- Minimal maintenance
- 15-year lifespan

Curious how compartment-level fire protection could fit your infrastructure?
