Spread reporting

The spread is not fixed and can vary depending on market conditions. To help traders better understand the possible range of spreads, we report the minimum, average, and maximum spreads based on actual customers' trades over 12 months.

The maximum spread stands for the 95th percentile calculated over all trades with the instrument during 12 months. This means that in 95% of trades, the spread has been lower or equal to the amount, and in 5% of trades, the spread has been higher than the maximum spread. Spread information is updated quarterly to reflect any changes in market conditions.

Last update: 13.07.2026

Some instruments don't have **Average spread % and Maximum spread (95th percentile) data available yet, because these are new instruments. Change will update this spread information in the upcoming months.*
