About Elicera Therapeutics AB

Elicera Therapeutics AB is a clinical stage cell and gene therapy company that develops next generation immune-oncology treatments based on iTANK-armed oncolytic viruses and CAR T-cells. The work is based on high-profile long-standing research conducted by Professor Magnus Essand's research group at Uppsala University and has resulted in the development of four drug candidates, including two CAR T-cells and two oncolytic viruses. The iTANK-technology platform can be used to arm any CAR T-cell therapy in development and activate killer T-cells against cancer. The company addresses an international billion-dollar market in cell therapy development by offering out-licensing of iTANK to CAR T-cell players in the pharmaceutical industry. The company's share (ELIC) is traded on Nasdaq First North Growth Market. For more information, please visit www.elicera.com
