

ORDER AGENT

Automate your recurring orders with Sibi Agents

Create an Order Agent that turns a spreadsheet of orders into placed Home Depot orders. Name it, set your rules, and let it handle the ordering. No integration to build and start with the file you already use.

How Order Agent works

Placing the same order again and again takes hours and invites entry errors. Order Agent turns it into a recurring task with the upload of a spreadsheet.

- 1

Send your file.

A spreadsheet, the same file you use today. No integration to build first.
- 2

Rows are checked.

Order Agent matches each product, checks stock, and applies your buying rules.
- 3

Orders are placed.

Order Agent sends them to Home Depot in batches. Each order returns a confirmation number and an order link.
- 4

Problem rows are held.

Rows with a missing item number or a bad contact are flagged, with a suggested fix for you to confirm.

WHEN A ROW IS WRONG

When a row has no item number, the agent holds it and suggests a filter to confirm.

CUSTOMER STORY

A modular building rental company

This company rents modular buildings. Each month, their team entered 250 to 1,200 rows of air filters by hand. Every order needed their full PO number on the invoice, and a truncated PO had delayed payments.

They automated it with an Order Agent, using their own rules: an approved price limit for substitutes, and ordering in pack sizes.

TIME SAVED

About 67 hours

back every month. That is about 8 workdays a month, or about 200 hours a quarter, at 800 orders a month and about 5 minutes each.

100 of 100

rows handled in the first batch

250 to 1,200

line items, now sent as one spreadsheet

Set the rules once

Which substitutes are approved, what to do when something is out of stock, how to order, and what to use when an address is missing. Your agent applies them to every row.

Substitutes

Which products are approved

Out of stock

What to order instead

How to order

Pack sizes and quantities

Missing address

Which address to use

Who it fits

Teams with large, recurring orders that start in a spreadsheet: property operations, facilities, and maintenance. Order Agent works with the file you already have.
