

A Simple Solution for **Low-Bandwidth Requirements**

BLENDED IP — DESIGNED TO ADDRESS YOUR NEEDS

We recognize that customers need a simple solution for out-of-band management, remote software loads and other low-bandwidth requirements that come with a data center deployment. CoreSite's Blended IP Service is designed to address these needs and can be ordered in conjunction with other space and power services offered by CoreSite.

SERVICE FEATURES

- Single or dual handoff options
- Up to 3 customer IP addresses available
- Six service rate options available: 10, 50, 100, 300, and 500Mbps, as well as 1Gbps
- 72 hour activation interval
- 24x7x365 service monitoring and management through CoreSite's Operations Service Center

BENEFITS TO YOU

- Streamlined solution for low-bandwidth IP requirements
- Fully-redundant network architecture helps ensure service continuity
- Source IP service includes at least two upstream providers to support best-available IP performance
- Reliable, SLA-backed service

Blended IP Service is Available in All CoreSite Locations

Blended IP Product Details — Simplified Access to Low Bandwidth IP Services

CoreSite’s Blended IP Service was designed to make it easier for enterprises to manage their IT solutions through a single billing model. We recognize that there is often a need for low-bandwidth Internet service that comes with a data center deployment, so we worked with multiple upstream IP providers to create a highly-reliable solution with the best available performance across providers. We offer single connections for traditional connectivity, or fully-redundant connections for mission-critical applications, all with fixed monthly fees and guaranteed rates up to the committed information rate for 10Mbps, 50Mbps, 100Mbps or 300Mbps, 500Mbps or 1Gbps service options. Additionally, our Blended IP service includes static IPv4 and IPv6 addresses and supports BGP routing.
