Cern Table

Fig40

Cern is a modern interpretation of a classic harvest table. Perfect for any interior space, the Cern table features essential design and formal lightness. Lovely to look at from all angles, Cern's uninterrupted glass top reveals the essence of its design; the graceful solid wood leg which is met with a seemingly sculptural corner element of polished aluminum – like a jewel in a glass case. Also revealed is a continuous ring in anodized aluminum with the intelligence to discretely manage connectivity eliminating the need for cut outs on the table's glass surface. The scale of the table is optimized for smaller meeting rooms, collaborative team work and with the addition of a modesty panel and other accessories for private office desks.

Its size range (up to 108") allows for glass to be used without a sub-top and the use of solid wood legs and corner connections that express Cern's true design intent. The table legs are available in either solid walnut or solid maple with a variety of finishes, as well as an aluminum leg option.

One leg has a groove to allow wires to be managed discretely to the floor.
