

Liquid Paint Finish - Metallic

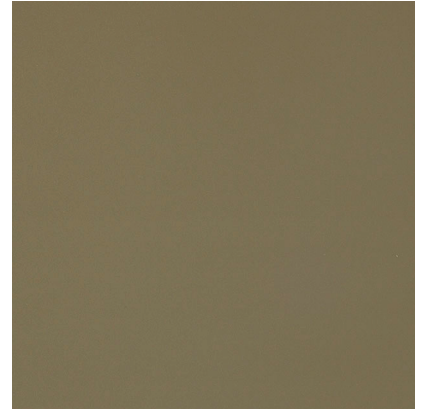

Liquid paint finishes are used when powder coating or anodizing is not suitable, particularly on certain cast components and non-metallic surfaces. These wet-applied finishes provide excellent durability, resistance to wear and chipping, and protection against environmental exposure, making them a practical alternative for long-lasting applications. While liquid paint finishes can be closely colour-matched to anodized surfaces, they cannot replicate the exact texture or reflectivity of anodizing.

MP-01 Silver Metallic

MP-02 Champagne Metallic

MP-03 Light Bronze Metallic
