Engineered Stone

Quartz is one of the strongest minerals found in nature—abundant like sand, yet harder than steel. Engineered quartz surfaces harness this strength by combining natural quartz with advanced resins and pigments, creating a material that outperforms marble, granite, and other natural stones. Through a precise manufacturing process, raw quartz is transformed into a durable, non-porous surface that offers superior performance, consistency, and design flexibility for modern interiors.

2141 Bizzard

4141 Misty Carrera

3100 Jet Black

Material:	93% crushed quartz, 10% polyester resin and pigments
Thickness:	0.79” (2cm)
Weight:	9-10lbs per square foot
Durability:	material complies to impact, stain and quality standards
Cleaning:	Water based home cleaning products

Finish colors and textures shown are digital representations and may vary across screens, printers, and lighting conditions. To ensure complete satisfaction, we strongly recommend obtaining, a physical sample before placing your order.
