

WEBINAR SERIES

State of Canada's Geothermal Industry

Presenter: *Emily Smejkal*

Canada's geothermal industry is at a pivotal moment. With growing interest in domestic energy solutions, geothermal is emerging as a reliable, baseload renewable resource that can leverage Canada's existing subsurface expertise. This webinar will explore the current state of play for geothermal energy in Canada—where the industry stands today, the opportunities and challenges ahead, and how innovation and collaboration are shaping its future. We'll examine recent developments in policy, technology, and investment, highlight key projects across the country, and discuss what it will take to scale geothermal as part of Canada's energy mix. Whether you're new to geothermal or deeply engaged in the sector, this session will provide insights into why geothermal matters now and where it's headed next.
