# Telescopic Driveshafts

**DESIGNED SPECIFICALLY FOR LIFTED VEHICLES**

The only Driveshaft assembly in the Australian aftermarket, designed for lifted applications.

**NEW**

Sliding telescopic extension shaft with roller splines

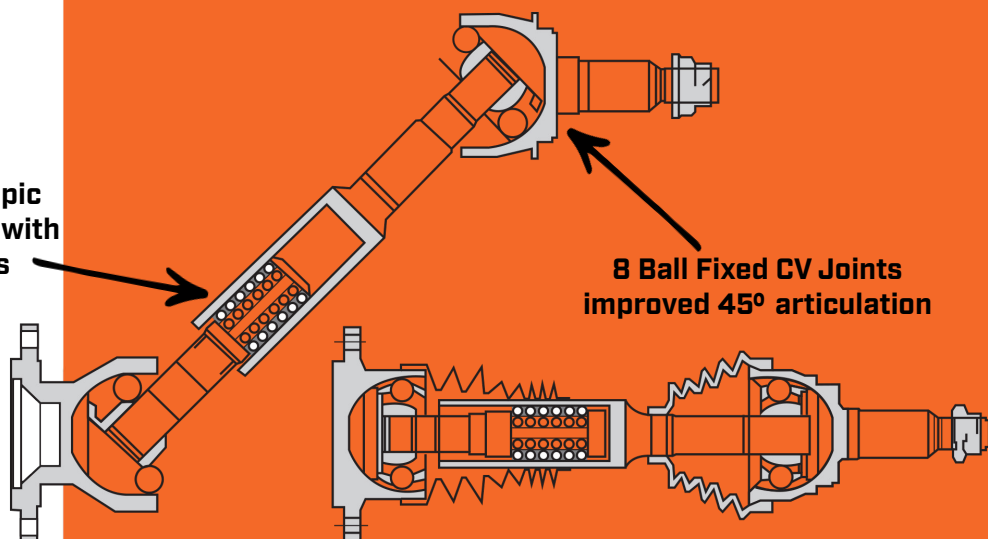

Lifting a vehicle significantly increases the stress on stock components and often exceeds their original design limits. Basco Telescopic Driveshafts are engineered to address these challenges by incorporating a sliding center shaft that provides greater linear travel compared to OEM driveshafts. This design supports enhanced suspension movement, making it ideal for off-road and lifted vehicle applications.

The driveshafts also feature high-strength inner and outer C.V. joints with a 60% greater operating angle on the inboard joint, effectively reducing the risk of joint failure associated with lift kits and increased ride height.

#### Key Benefits:

**Sliding Spline Center Shaft:** Offers up to 40mm more linear travel than OE, allowing for increased suspension articulation in off-road and lifted setups.

**High-Strength 8-Ball Fixed C.V. Joints:** Inner and outer joints are engineered to handle 60% more operating angle at the inboard joint, eliminating failure caused by lift kits.

**Basco Wholesale**
