Facility (Taylor, TX)

WHO IS CHOICE BAGGING?

We are a Highly Experienced Team of Hands-On Innovators and Problem Solvers Supplying High Quality Solutions for Bag Filling for Dry Powders & Bulk Solids that Match Time-Tested, Common Sense Solutions and Proven Technologies with a Deep Understanding of our Customer's Needs.

FOR PUBLIC RELEASE

OUR FOCUS

We provide flexible packaging equipment, systems and services for the dry powders / bulk solids industries including agricultural products, chemicals, construction materials, mineral / rock products and food products. Whether flake, granule, or chunk; fibrous, fine powder; bulk density of 15 or 150 lbs./cu. ft. (250 or 2,400 kg/m³), is freely flowing, fluidized, packs, plugs, cakes, fluidized, agglomerates; breaks easily or separates, **CBE** has a packaging solution to meet your needs

MAKING GOOD IDEAS BETTER

Over 40 years of experience and our continual pursuit to supply our customers with improved solutions to bag packaging challenges has produced equipment designs that are flexible and built on scalable design platforms that allow for individual customization for specific customer needs while utilizing standardized parts. We continuously analyze, improve and refine our designs to make them the simplest, feature-full and cost effective equipment available on the market today.

A LEGACY OF MASTERY

The **CBE** culture continuously seeks to improve the mastery of its craft. It is built on the multi-generational knowledge and expertise that began in 1978 and continues today with career professionals who made bag packaging not only a career but also a calling. Our legacy is defined by their character, their skill and hard work. Their dedication to the craft and commitment to excellence instructs us who we were, defines who we are and drives who we will become.

ENGINEERED SOLUTIONS FOR

BAG CLOSING EQUIPMENT

A variety of industrial *Bag Sealing and Sewing Equipment* capable of sealing / closing paper, poly and poly-woven bags (both gusseted and non-gusseted). This includes “pinch bottom” sealers multi-wall paper bags, band and hot air sealers for PE, PP, & foil bags and sewing systems for both paper and poly-woven bags.

BAG HANDLING EQUIPMENT

Bag Handling Conveyors are designed to *tip, flip, turn, straighten, flatten, check weigh, print, label, incline and transport filled bags from bag filling to bag palatalizing systems*. Our system includes bag transfer conveyors, incline/transport conveyors, bag flattening conveyors, bag turner conveyors, bag kickers, bag closing conveyors, v-through conveyors, check weigher, reject conveyors, and bag printing conveyors.

BULK BAG UNLOADING

Heavy Duty Bulk Bag Unloading System designed to discharge and condition 1,000—4,400 lbs Bulk Bags with free flowing powders, granular and pelleted materials into *Downstream Processes or Bag Filling Equipment*.

PALLETIZING SYSTEMS

Robotic Bag Palatalizing Systems that are capable of stacking bags at rates from *1-24 bags per minute*. System options ranges from low speed that are very space and budget efficient to high speed systems that integrate *automatic pallet dispensing, bag palatalizing and automatic stretch wrapping into a single process*. All options are geared around reliability, ease of use and comprehensive after sale support and service.

VALVE BAG FILLERS

Valve Bag Filling systems are ideal for bagging granulated, dusty powders ranging from minerals, building materials and chemicals. Valve Bag Fillers are predominantly *gross weigh fillers* and can be equipped with gravity, pneumatic and, impeller or auger feeders depending on the needs of the application. They are well suited for both manual and automated applications.

OPEN MOUTH BAG FILLERS

Open Mouth Bag Fillers are ideal for bagging a wide range of materials free flowing granulated materials *such as feed and seed through hard to handle materials or products such as cake mixes and food products*. There are two basic styles of open mouth bag fillers: *gross weigh and net weigh* each of which can be fed by gravity, vibratory, belt or auger feeders. They are well suited for both manual and automated applications.

BULK BAG FILLERS

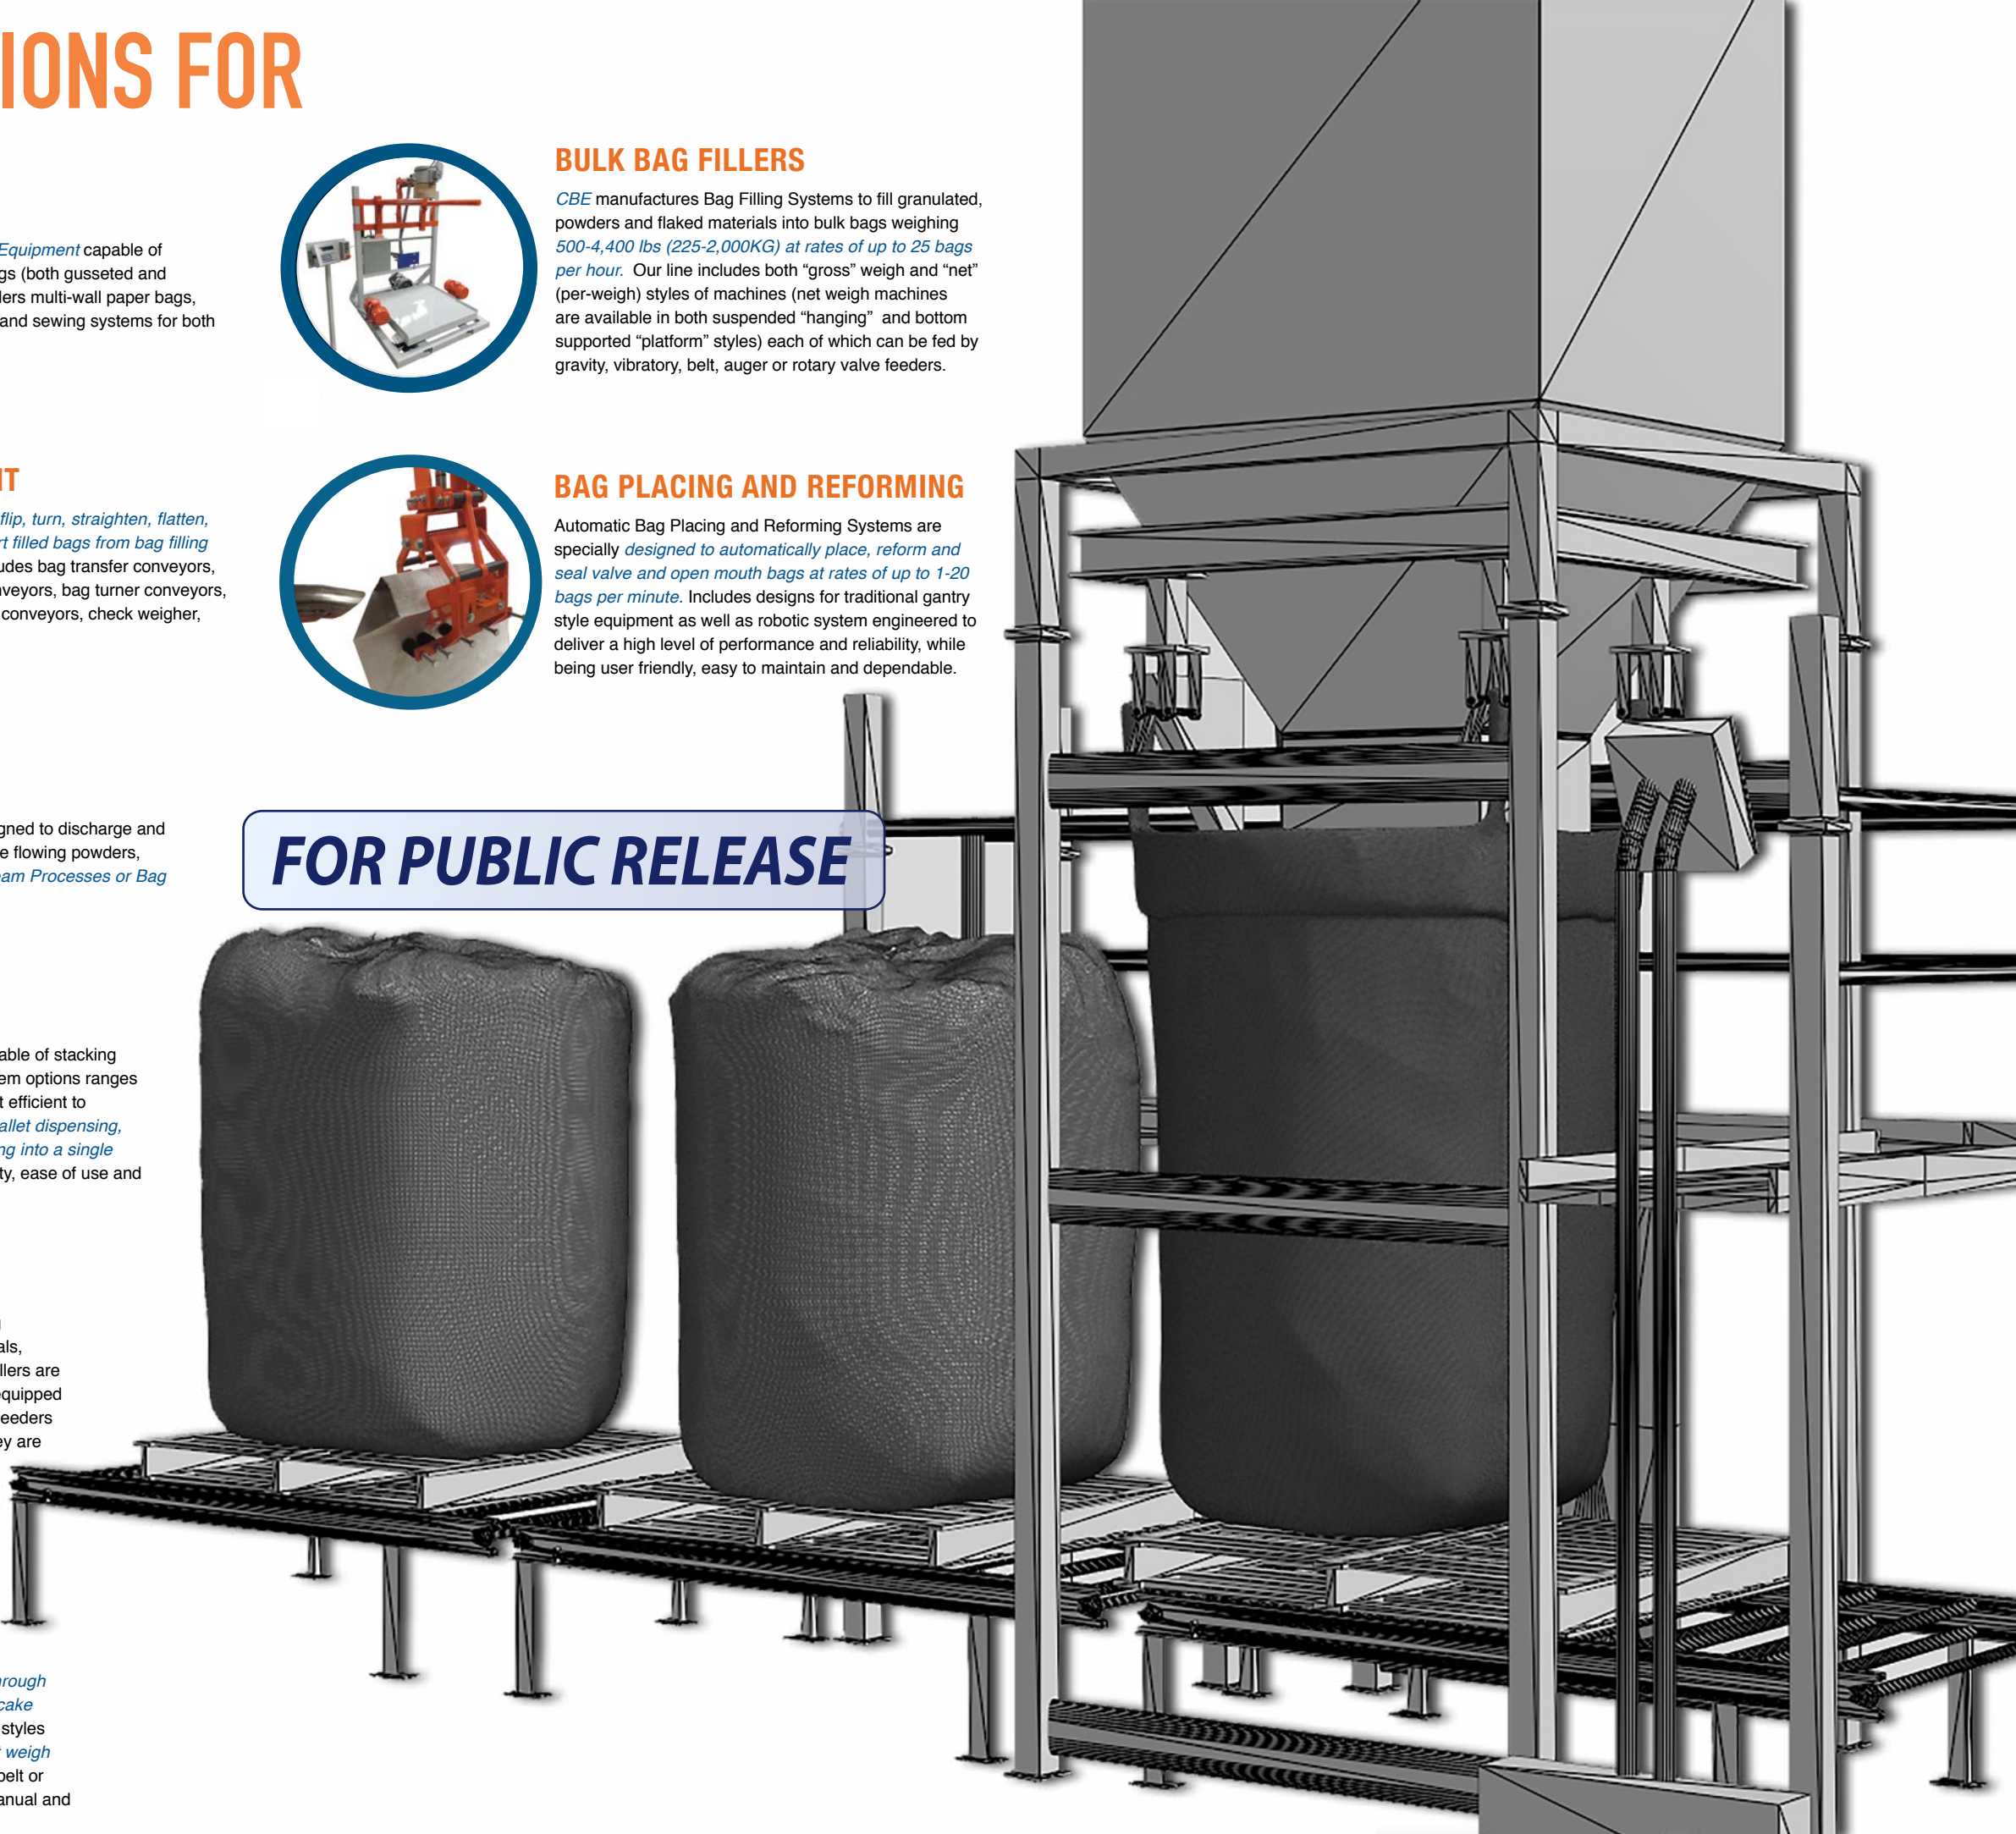

CBE manufactures Bag Filling Systems to fill granulated, powders and flaked materials into bulk bags weighing *500-4,400 lbs (225-2,000KG) at rates of up to 25 bags per hour*. Our line includes both “gross” weigh and “net” (per-weigh) styles of machines (net weigh machines are available in both suspended “hanging” and bottom supported “platform” styles) each of which can be fed by gravity, vibratory, belt, auger or rotary valve feeders.

BAG PLACING AND REFORMING

Automatic Bag Placing and Reforming Systems are specially *designed to automatically place, reform and seal valve and open mouth bags at rates of up to 1-20 bags per minute*. Includes designs for traditional gantry style equipment as well as robotic system engineered to deliver a high level of performance and reliability, while being user friendly, easy to maintain and dependable.
