## Overview

The WG Cargo X-Ray Scanner Search Test Kit components are used to covertly test an X-Ray Scanner operator's ability to detect suspicious items.

The kit is ideal for training and assessing X-Ray Scanner operatives. The kit components can be used as individual items, or they can be assembled into simulated IED's. The items are inserted on the conveyor travelling to the X-Ray Scanner without the operator's knowledge.

The components contained in the kit meet the TSA, DHS and FAA technical specifications. The kit is supplied in a heavy-duty discreet and lockable case.
