

MEDICAL

Case Study Template

Diagnostic Process

[Outline the investigations, tests, and observations that led to the diagnosis]

Case Title

[A concise, descriptive title highlighting the main medical focus or condition]

Treatment Plan

[Describe the treatment or intervention used: medications, procedures, therapies & explain the reasoning behind the chosen approach]

Summary

[A short overview of the case: who the patient is, what happened, and why this case is significant]

Progress and Results

[Track the patient's response over time, noting improvements, side effects and include measurable outcomes where possible]

Patient Profile

[Age, gender, relevant background details, and key medical history]

Clinical Insights

[Highlight what this case reveals: an unexpected result, rare presentation, or important reminder for practice]

Presenting Problem

[Describe the main symptoms or complaints that led the patient to seek care]

Key Takeaway

[Summarize what other practitioners can learn or apply from this case]
