

Buckingham Routh Achieves 75% Efficiency Increase in Payroll Workflow with New Procore to Paychex Data Connector

PROCORE® TO PAYCHEX® INTEGRATION CASE STUDY:

How the payroll team for America's oldest mechanical contractor, in operation since 1854, reclaimed precious payroll processing time with a Procore-to-Paychex integration.

"Payroll used to take an entire half day. Now, everything gets done in an hour. All I essentially have to do is push a button to tell the integration to execute, and everything pulls over seamlessly and tracks accurately."

— Brittney Holbert,
AP/AR Specialist,
Buckingham Routh Co.

Integration Challenge

Buckingham Routh needed to move hourly employees' time and job data from Procore into Paychex without duplicate entry. The company had replaced its previous system with Procore and shifted from handling payroll in-house to using Paychex.

Details mattered. Regular time, overtime, and double-time needed to transfer with the correct labor codes, jobs, and job numbers. The team also needed control over timing, since late entries, foreman approvals, holidays, and weather disruptions could affect payroll readiness.

Integration Solution

Flexspring connected Procore with Paychex so the payroll team could send data when everything was ready. Employees enter their hours in Procore daily, and once the team confirms entries are complete and foremen have approved them, the push of a single button starts the transfer.

Flexspring shaped the integration around the payroll team's process and helped them get comfortable using it. "The team at Flexspring is great, and we had really good rapport with them," said Brittney. The payroll team now completes weekly payroll in an hour, freeing up 75% of the time previously spent on manual processing tasks while staying in control of their data.

Integration Use Case

Procore Timesheet Data to Paychex

The connector sends hourly employees' regular time, overtime, and double-time from Procore to Paychex for weekly processing. The payroll team starts each transfer without re-entering any data.

Coollest Features of This Integration

Control over transfer timing and clear email notifications are standout features for the payroll team.

Initially, the integration transferred data at a scheduled hour. Flexspring adjusted the process so the payroll team can wait for completed entries, foreman approvals, and schedule changes.

"We still wanted control over when we pushed the time through," said Ashley Cisto, the company's finance and operations manager. "Being able to start the transfer ourselves means we know everything is approved and ready to go."

Email notifications proved equally helpful. After each run, an email confirms which records transferred successfully and identifies any issues. If a record needs attention, the team can correct the underlying data and easily rerun the transfer.

The experience also gave Buckingham Routh confidence about working with the same team on future integrations. "Flexspring's team is absolutely wonderful," said Ashley. "We've already told them that if we do another integration down the road, we want them on our team again."

When experts connect data, you have peace of mind.
