

TRI-X3 ELECTRONIC STERILIZATION SPOT SPRAY

TECHNOLOGICAL BREAKTHROUGH

The 03-INNOVATIONS TRI-X3 Electronic Sterilization (ES) Spot Spray provides instant contact sterilization utilizing water electrolysis.

Our core technology enriches regular tap water to instantaneously produce O₃ (ozone) enriched with OH (hydroxyl radicals) plus HClO with additional oxidation benefits.

ADVANTAGES

- All disinfection and sterilization chemicals and biocides are oxidizers. We provide the highest oxidation potential which exceeds everything else.
- The TRI-X3 ES SPOT SPRAY kills 99.999% of bacteria in just 10 seconds plus viruses and all harmful pathogens.

UNLIMITED APPLICATIONS

- The TRI-X3 ES Spot Spray instantly provides an illuminated spray to conveniently sterilize germs and pathogens in multiple applications. Eliminates all forms of cross-contamination, germs and harmful pathogens.
- Eliminates surface contamination from Viruses such as Covid, Hepatitis and Legionella. Kills Bacteria such as Listeria, E-Coli, Salmonella and Norovirus, in addition to germs, fungus and mold spores.
- Sanitizes everything on contact in just 10 seconds. Best of all it reverts to pure water after sanitization with no chemical residue

VERIFICATION

TEST STRIPS

- Sensafe Test Strips show the extent of ozone's oxidation potential including the oxidation potential of all chemical alternatives. This verifies that no chemical alternative can match the power of the TRI-X3 ES Spot Spray in time and sterilization efficacy.

PRODUCE

- All applications relating to produce, dairy, wines and food have FDA and USDA approval.

EPA LISTING

- This covers anything relating to sterilizing objects and surfaces that can be contaminated with germs and harmful pathogens.
