

## Case Study

**Client:** Matthews Environmental Solution  
**Project:** Incinerator Design Package

### Background

Matthews Environmental Solutions (MES) is a globally recognised expert in combustion technology, including cremation, incineration and emission control. Its products and services meet the most demanding performance and environmental standards worldwide. MES has manufacturing facilities in three countries and over 5,000 installations worldwide.

### Our Response

MES provided the expertise relating to the combustion sections of the project (incinerator, boiler etc.)

Haden Freeman provided the expertise relating to:

- Project Management
- Process
- EC&I
- Validation
- Layout
- Piping
- Quality

### Result

MES was awarded the contract by DEFRA and, with Haden Freeman's support, designed a new animal carcass incinerator.

"We approached HFL a few years ago and asked them to help us with our process engineering. Since then we've cooperated on a number of incineration projects. We've also discovered they provide a full range of services which is a perfect match for our expertise."

### Requirement

HFL was tasked with providing a full design package for the supporting processes and services relating to a new animal incinerator for DEFRA .
