Specialists in Passive Fire Protection

Dryplast Fire Protection

Dryplast Fire Protection can ensure your building is safely and legally protected from fire, we can also assist with retrospective work, as well as emergency work.

Building regulations now outline the need for large buildings to be divided into compartments and specify the level of fire performance of the compartment walls and floors needed to preserve both building structure and life through fire and smoke containment.

In most buildings, mechanical and electrical services by necessity will breach compartment walls and floors allowing failure of integrity and insulation to occur where gaps around services have not been adequately fire stopped. Dryplast Fire Protection can correctly install certified fire stopping systems, that will contain a fire at its source and limit the risk of the destruction caused by the spread of fire and the release of toxic gasses.

QUALIFIED, EXPERIENCED AND ACCREDITED

Accredited to IFC Group (a UKAS accredited, internationally recognised, notified certification body) also as a member of ASFP (Association for Specialist Fire Protection) we offer a fully certificated and documented passive fire protection service that meets all current legislation.

We ensure that only certificated and tested products are installed within the approved field of application by skilled, competent and closely managed operatives to give confidence to specifiers, users, occupiers, owners and enforcement bodies.
