CDF

COMPACT DENSITY
FIBREBOARD

INKO presents CDF, an ultra-compact wood fiber board with decorative laminate.

- A highly resistant material to scratching and splashes, as well as being water-resistant and fire-resistant.
- It is 35% lighter than traditional compact materials and easy to process, without requiring special cutting tools.
- It comes in two thicknesses: 19 mm for frames and 12.4 mm for countertops.

In summary, high resistance with an attractive appearance and easy processing.

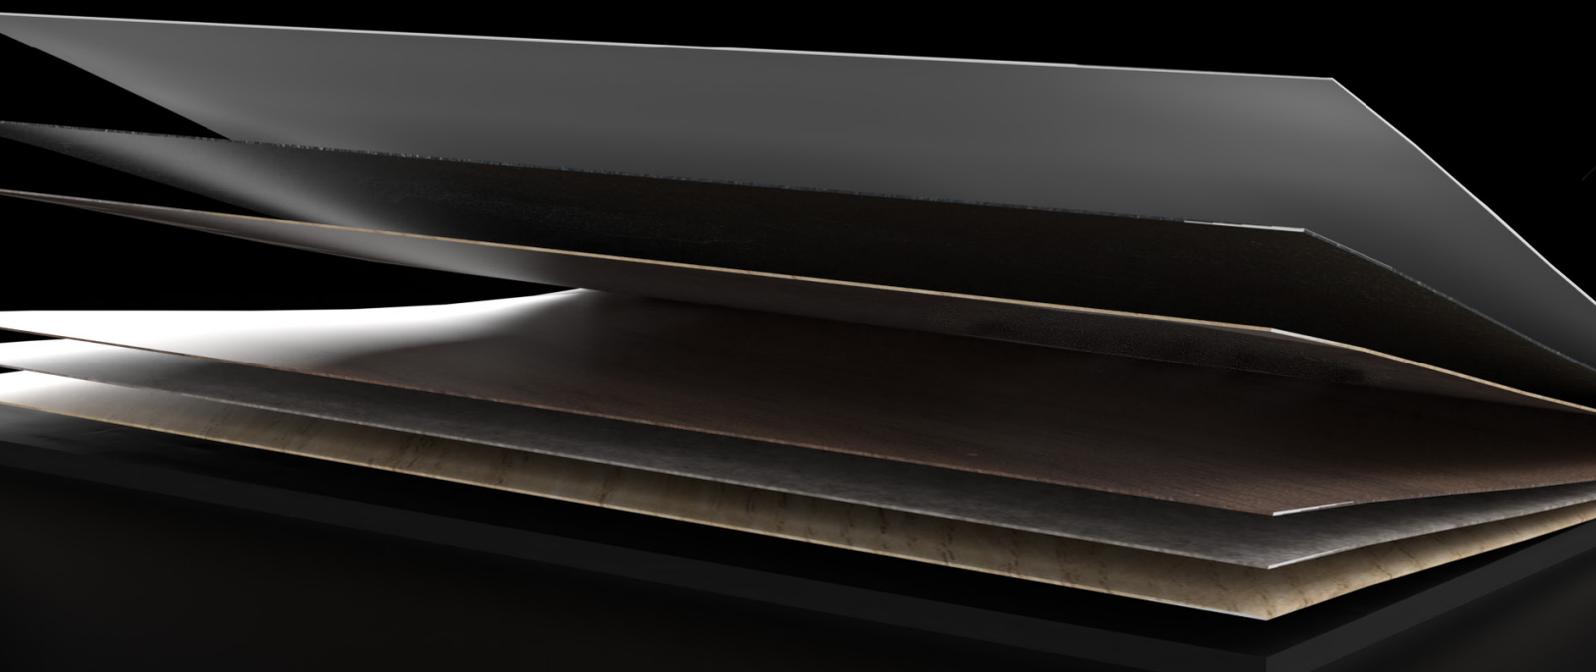

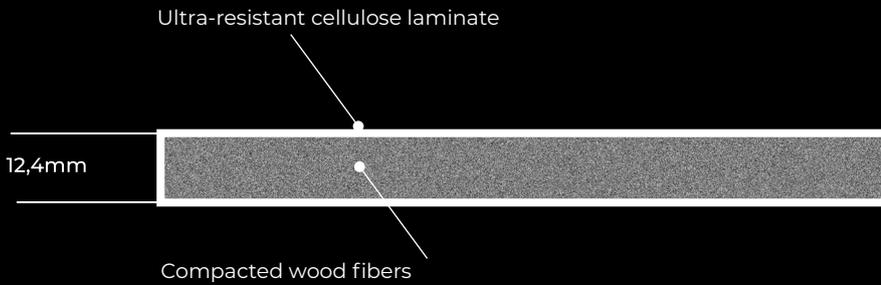

**Versatility in finishes,
frequently updated to
adapt to the needs and
preferences of customers.**

Robustness and aesthetics

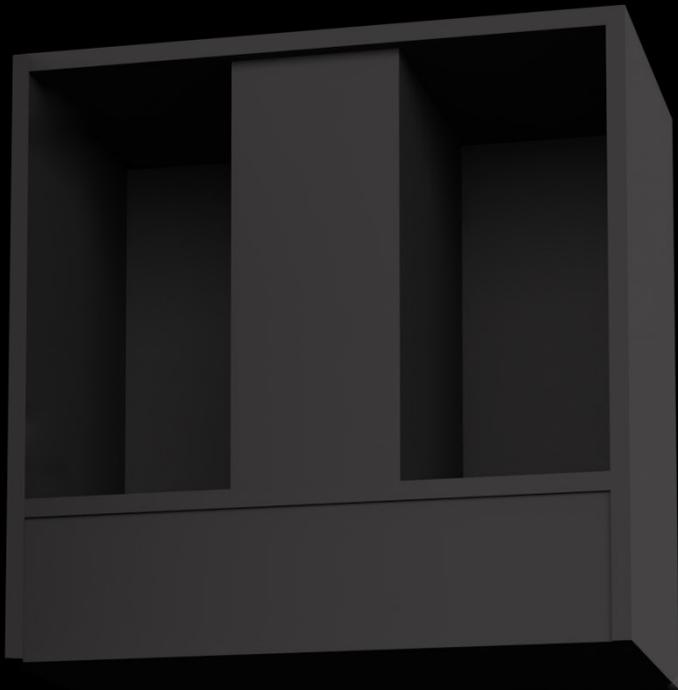

in just 12,4 mm

Despite its thinness, CDF behaves as a stable product in its form and properties, even in extreme humidity situations.

Its technical characteristics also position it as one of the most resistant products on the market in its category.

 Extremely compact and durable	 Moisture-resistant	 Low swelling	 Hardly flammable	 Shock-resistant	 Scratch-resistant
 Easy to process	 Low emission levels	 Environmentally friendly	 Easy to care for	 Hygienic	 Variety of colors and textures

The CDF board, in addition to its application for countertops, is a suitable option for use in furniture manufacturing, especially for those that may come into contact with water and moisture, such as the sink module, hood module, etc.

Thanks to its properties, CDF is an innovative alternative with advantages over other materials like marine board.

- It offers greater aesthetic integration since visually, these modules would be identical to the rest.
- It has superior physical and mechanical properties as it is water-resistant, fire-resistant, and easier to maintain and clean.
- It is easier to process as it does not require varnishing.

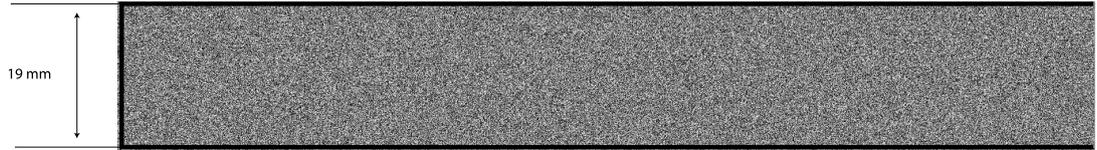

The CDF frame option has a thickness of 19 mm and is available in three frame colors: Sand, White, and Ash.

All edges will be coated with PUR glue, just like the rest of the modules.
