

GS-4000

SERIES

MAXIMUM PERFORMANCE CNC TURNING CENTERS

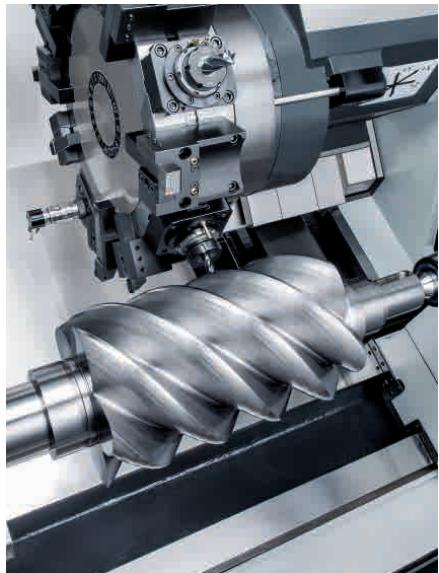

THE ULTIMATE MACHINING POWER
WOODWAY®

MAXIMUM PERFORMANCE CNC TURNING CENTERS

For those seeking a heavy-duty maximum performance turning center that's packed with the latest technologies, GOODWAY's GS-4000 series is the perfect answer. These machines offer awesome turning power, with the 2-speed gear-head spindles being standard on most models. Live tooling, Y-axis and sub-spindle models further increase machining efficiency and accuracy, while reducing manpower. Furthermore, GOODWAY machines are always fully loaded with standard features that are either not available or costly options found on other machines. Features such as the chip conveyor, programmable base tailstock, turning tool holders, and many more standards .

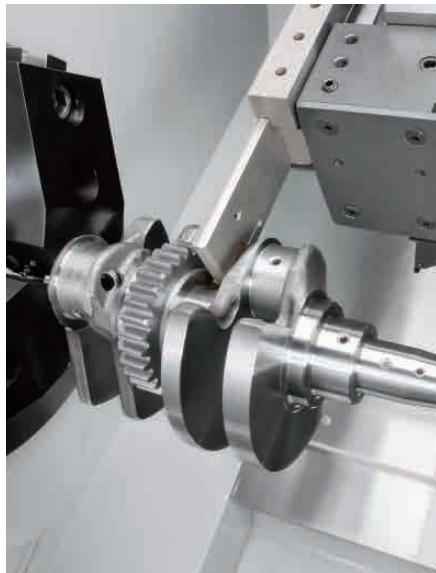

- ▶ 37 kW high horsepower spindle motor drive with 2-speed gear box design provides max. torque 2,920 Nm in 121 rpm (GS-4300) which can meets any heavy cutting requirements.
- ▶ All axes guide ways are designed by high rigid box way with heat treatment and precision grinding which provides the rigidity needed for heavy cutting.
- ▶ Option live tooling turret, sub-spindle, C-axis and Y-axis control allows GS-4000 series to perform multiple tasks on both front and rear side of work-piece, such as turning, off-center milling, drilling and tapping. The machining capability equals the integration of two turning center and a machining center, which all machining process can be done in one GS-4000 machine.

Machinery Industry

Rotor of air compressor / FCD600

Automobile Industry

Crankshaft / SCM440

Electrical Mechanical Industry

Elevator sheave / FCD600

- ▶ 4 bed lengths and 2 spindle sizes offer a total of 8 basic model configurations.

Model		GS-4000 series	GS-4300 series
Chuck Size		Ø 15" / 18"	Ø 20" / 24"
Bar Capacity		Ø 115 mm (4.5")	Ø 165 mm (6.5")
Turning Length *1	800 mm (31.4")	GS-4000 / M / Y / S / MS / YS	GS-4300 / M / Y / S / MS / YS
	1,500 mm (59")	GS-4000L / LM / LY / LS / LMS / LYS	GS-4300L / LM / LY / LS / LMS / LYS
	2,300 mm (90.5")	GS-4000L ² / L ² M / L ² Y	GS-4300L ² / L ² M / L ² Y
	3,100 mm (122")	GS-4000L ³ / L ³ M / L ³ Y	GS-4300L ³ / L ³ M / L ³ Y

*1 Individual models may vary, detail specification please see work range diagram.

「M」 model for optional live tooling turret function. For detail specifications, please see Page 6 & 21.

「Y」 model for optional Y-axis function. For detail specifications, please see Page 9 & 21.

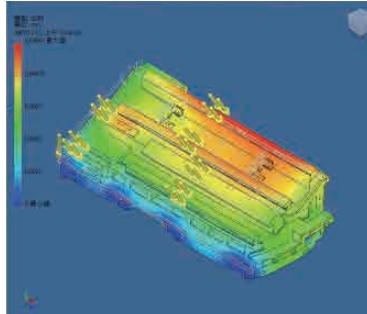

「S」 model for optional sub-spindle function. For detail specifications, please see Page 8 & 22.

- ▶ Fully enclosed sheet metal and telescopic cover can keep chips and coolant contained for a clean working environment. The enlarged window and adjustable operation panel design significantly improve the convenience of the operator.
- ▶ Standard chip conveyor with enlarged separate coolant tank can ensure the best cooling performance.

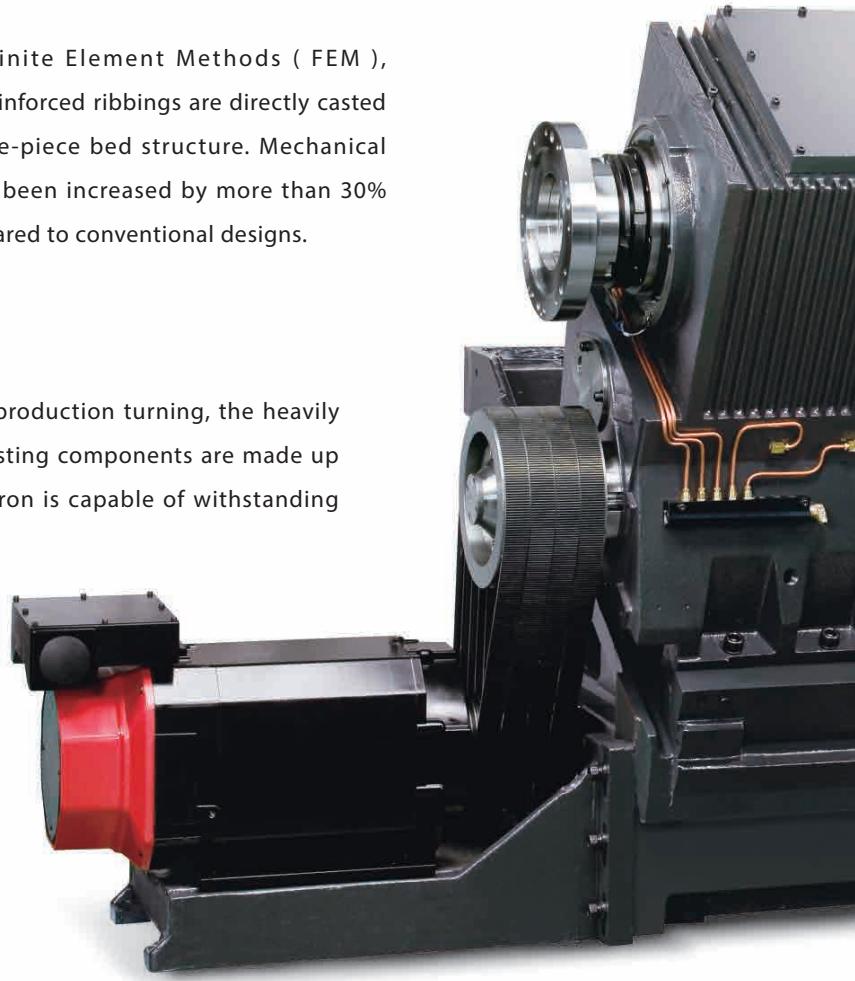

GS-4000L²Y equipped with live tooling turret and Y-axis control
(dual steady rest is option)

SUPER HEAVY-DUTY CONSTRUCTION

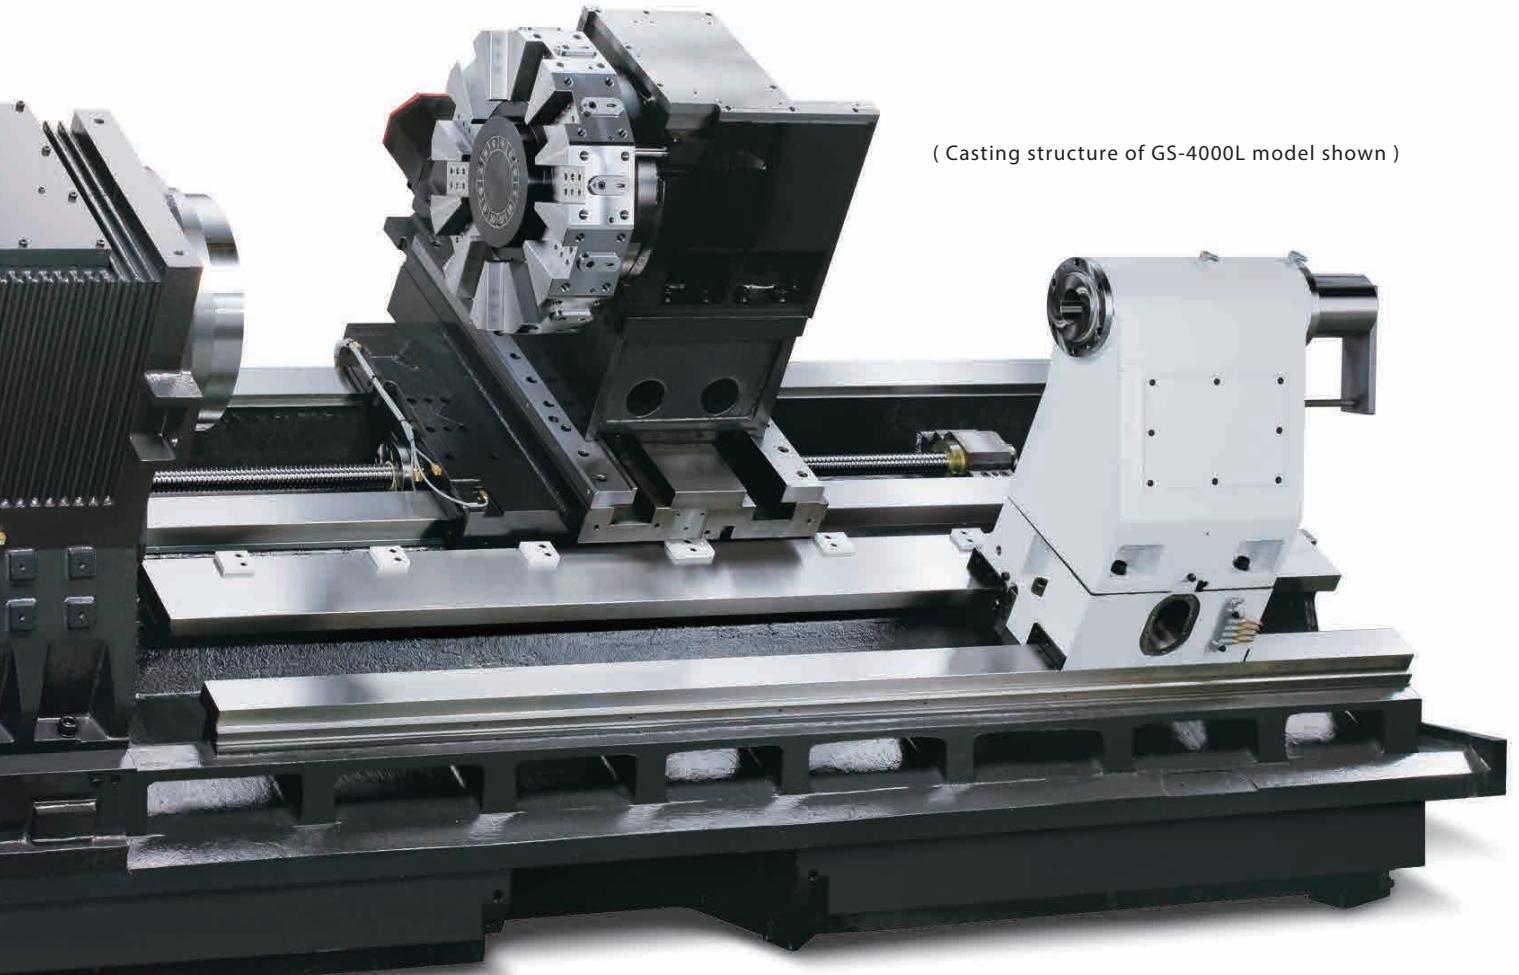

► By using Finite Element Methods (FEM), optimally reinforced ribbings are directly casted into the one-piece bed structure. Mechanical rigidity has been increased by more than 30% when compared to conventional designs.

- Built to endure years and years of rigorous high production turning, the heavily ribbed, one-piece thermally balanced bed and casting components are made up of FC350 MEEHANITE casting. FC350 grade cast iron is capable of withstanding much greater stress without deformation and provides maximum vibration damping, resulting in a machine that will outlast and outperform competition.
- With its low center of gravity, the heavy-duty bed and 30° slant bed design provides a super rigid foundation for the headstock, turret, and tailstock. This creates the rigidity needed to perform super heavy-duty turning and maintain long-term high precision accuracy.

► Contact surfaces of all slides, headstock, turret, tailstock, and ball screw bearing housings with the machine bed are hand scraped to provide maximum assembly precision, structural rigidity, and load distribution.

- Extra wide hardened and ground box ways are directly formed into the machine bed and saddle during the casting process. They are precision machined and widely spaced for maximum strength. The box way design also provides the rigidity needed for heavy duty and interrupted turning applications.
- C3 class hardened and precision ground ball screws ensure the highest accuracy and durability possible. Plus, pretension on all axes minimizes thermal distortion.
- The L³ series Z-axis, equipped with independent supporting mechanism, prevents long-sized ball screws from deforming and ensures excellent performance for the axial feed and turning accuracy.

(Casting structure of GS-4000L model shown)

- ▶ X and Z axes are driven by over-sized FANUC αi series absolute AC servo motors, providing tremendous thrust outputs with faster acceleration and deceleration. Absolute encoder technology saves time and money by eliminating the use of limit switches, thus, eliminating referencing axes to home positions and replacing broken limit switches.

Programmable tailstock design, both tailstock positioning and quill are programmable.

- ▶ Manual mode quill-jog function allows the quill to be inched forward, which makes it easier to insert the center into the center hole.
- ▶ Movement of the base and quill in auto mode are controlled by M-codes and thrust pressure is manually adjustable.
- ▶ Z-axis carriage automatically locks onto the tailstock base and moves it to the desired position with precision accuracy.

ULTIMATE TURNING POWER

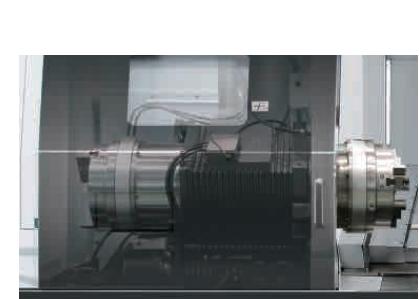

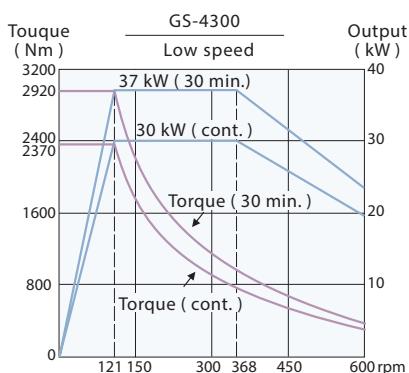

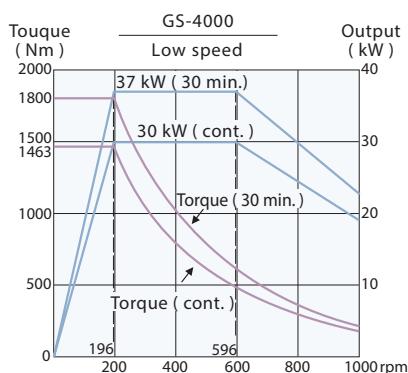

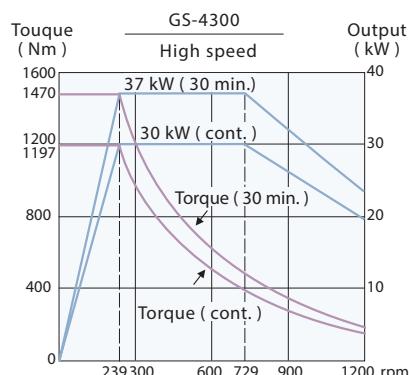

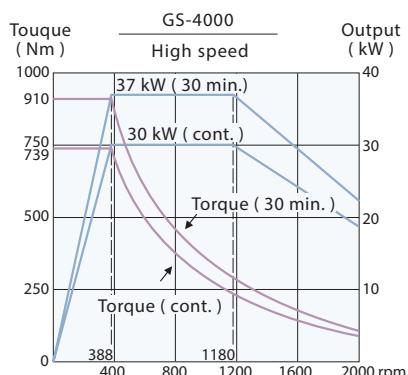

► The heavy-duty headstock is made up of one-piece casting, reinforced with heat dispensing fins.

► P4 grade (Class 7) super-high precision bearings are directly assembled for maximum level of support and precision. Bearing configuration is designed for super heavy-duty cutting with ultra-smooth performance, long term durability and a high level of accuracy.

► The 2-speed, super heavy-duty gear head incorporates advanced mechanical designs. Mated with a 37 kW (30 min.), a tremendous amount of low-end torque is provided to handle heavy material removal on large diameter parts.

Spindle Output

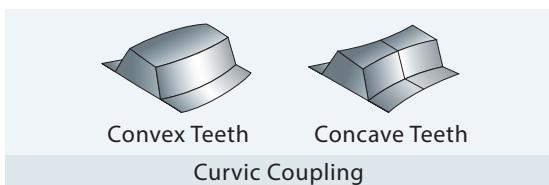

Dual-chucks (Opt.)

► The front-end of the spindle can be installed with an air chuck or a manual chuck to easily apply operations such as thread cutting and machining long work-pieces.

ADVANCED TURRET TECHNOLOGY

- ▶ Ø 320 mm diameter super high precision CURVIC couplings accurately position the turret disk and 6,400 kg of clamping force ensure abundant turret rigidity for all cutting conditions.
- ▶ The 12-station heavy-duty servo indexing turret achieves 0.3 second indexing times for adjacent stations. Index movements are continuous, without pauses, and is capable of turning Ø 260 mm (Ø 10.5") diameter work-pieces without interference when using boring tools. The optional 10-station turret even clears a diameter up to Ø 330 mm (Ø 13").

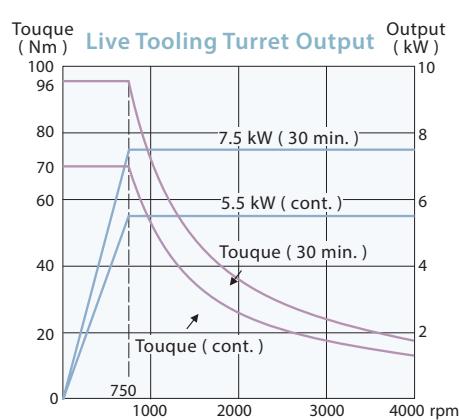

- ▶ The curvic couplings provide a large contact area and are designed with an auto-clean feature not seen on traditional couplings.

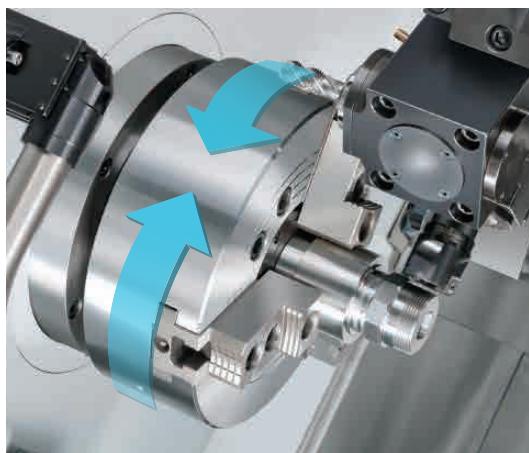

LIVE TOOLING TURRET

- ▶ Live tooling and C-axis control capabilities on the GS-4000 series allow the machine to perform multiple tasks on a work-piece, such as turning, milling, drilling, and tapping. It eliminates manpower and cycle time while reducing in loss of accuracy, which will occur if the part is moved from machine to machine.
- ▶ The GS-4000 series live tooling turret is driven by a large 7.5 kW (30 min.) motor. Combined with a powerful gear driven spindle, it provides ultra-high power to complete any difficult milling, drilling, and tapping applications.
- ▶ The 12-station GOODWAY live tooling turret offers 12 stations available for live tooling, and the live tools only rotate in working position in order to reduce power loss and heat.

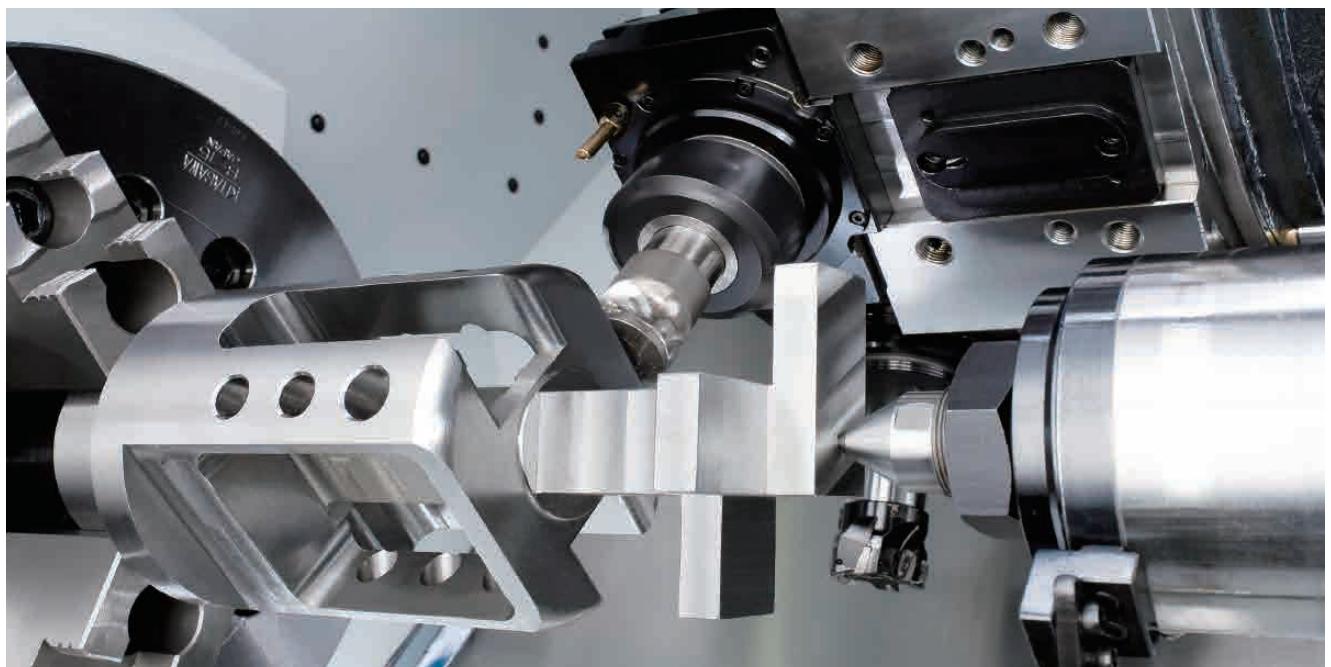

ULTIMATE C-AXIS SPINDLE

- ▶ By Cs-axis contouring control mode, C-axis indexing is driven by FANUC spindle motor with disc brake system and high resolution encoder. It can execute linear interpolation and circular interpolation with other feeding axes to obtain the required precise contour curve.
- ▶ With Cs-axis extremely high dynamic performance, spindle mode can directly switch to C-axis servo mode. The fast indexing speed (33 rpm/min.) and min. indexing angle is 0.001°, which can effectively meet the machining need on GS-4000 series.

MACHINING PERFORMANCE

Turning Capability

Model	Work-piece		Cutting condition				Power requirement
	Material	Diameter (mm)	Spindle Speed (rpm)	Cutting Speed (m/min)	Cutting Depth (mm)	Feedrate (mm/rev)	
GS-4000							
Heavy Cutting	S45C	Ø 175	310	170	10	0.6	102/70
Drill	S45C	Ø 58	741	135	—	0.18	62/85

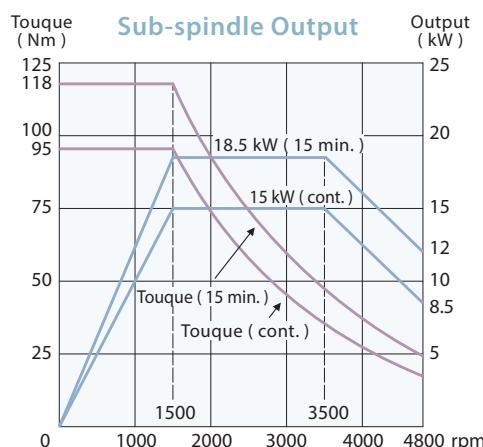

Machining Capability

Model	Work-piece		Cutting condition				Power requirement
	Material	Diameter (mm)	Spindle Speed (rpm)	Cutting Speed (m/min)	Cutting Depth (mm)	Feedrate (mm/rev)	
GS-4000M							
Drill	S45C	Ø 25	249	20	—	90	—
End Mill	S45C	Ø 25	510	40	15	290	—

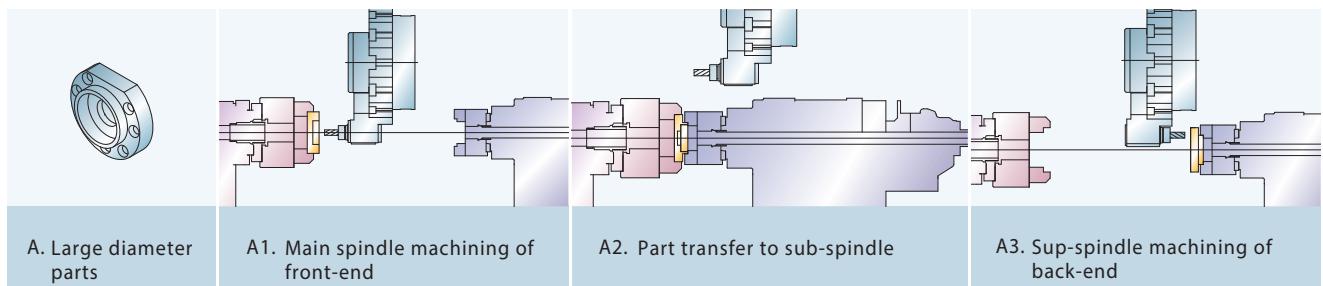

BACK-END MACHINING CAPABILITY

- ▶ An 8" chuck size sub-spindle, driven by a powerful 18.5 kW (15 min.) built-in type FANUC motor (Integrated Motor), is available on the GS-4000 series for back-end machining.
- ▶ The sub-spindle travels on the B-axis are used with roller linear guide ways, featuring both heavy cutting capability and fast movement.

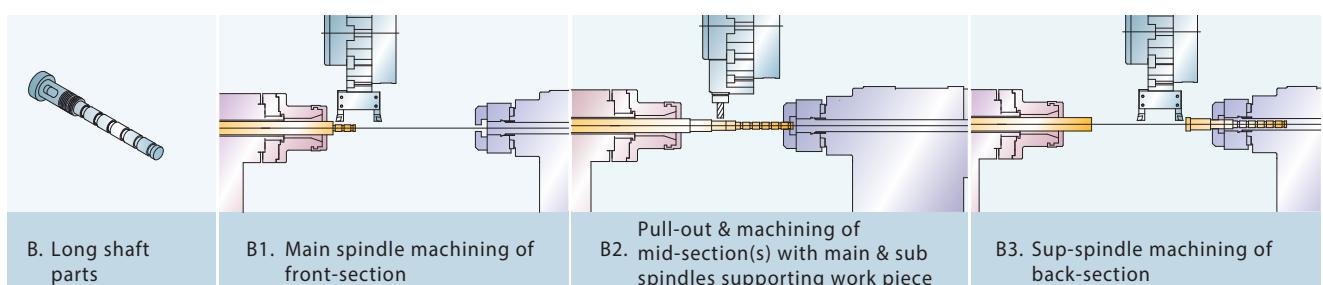

(Sub-spindle is not available on L² / L³ series.)

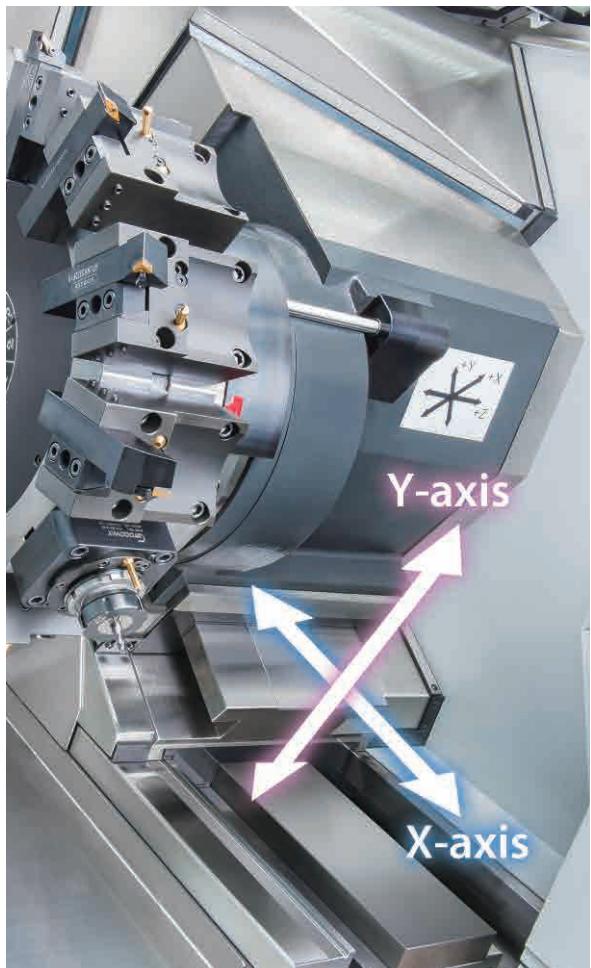

- ▶ Automatic part transfer of work piece from main spindle to sub-spindle saves manpower and cycle time, while reducing accuracy lost, which will occur if manually handling the part from machine to machine.

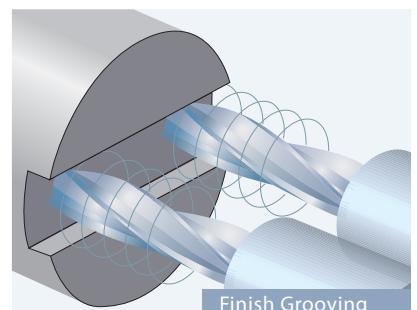

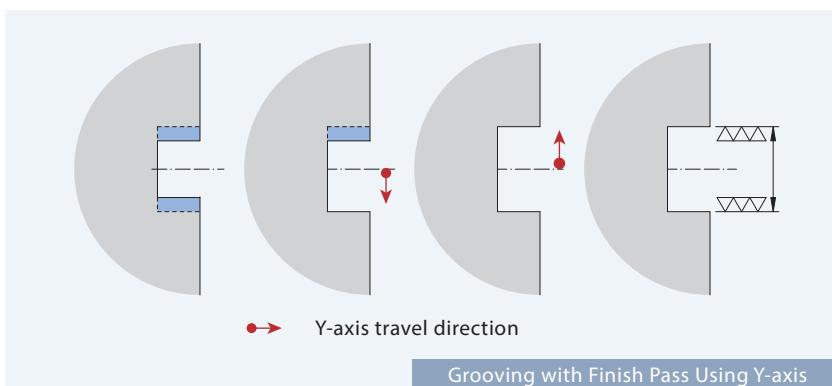

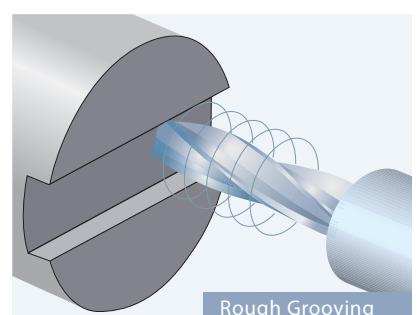

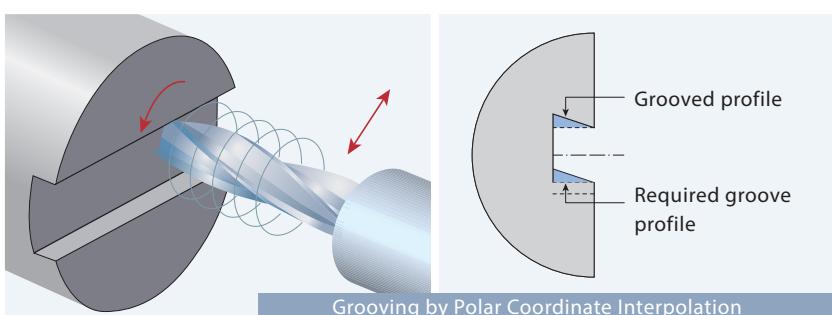

- ▶ With Ø 45 mm (1.77") bar capacity, the sub-spindle configuration is also ideal for machining long work pieces such as small diameter shafts. Both ends of the work piece can be supported by the main and sub spindles, allowing the middle section(s) to be accurately machined.

Y-AXIS MACHINING CAPABILITY

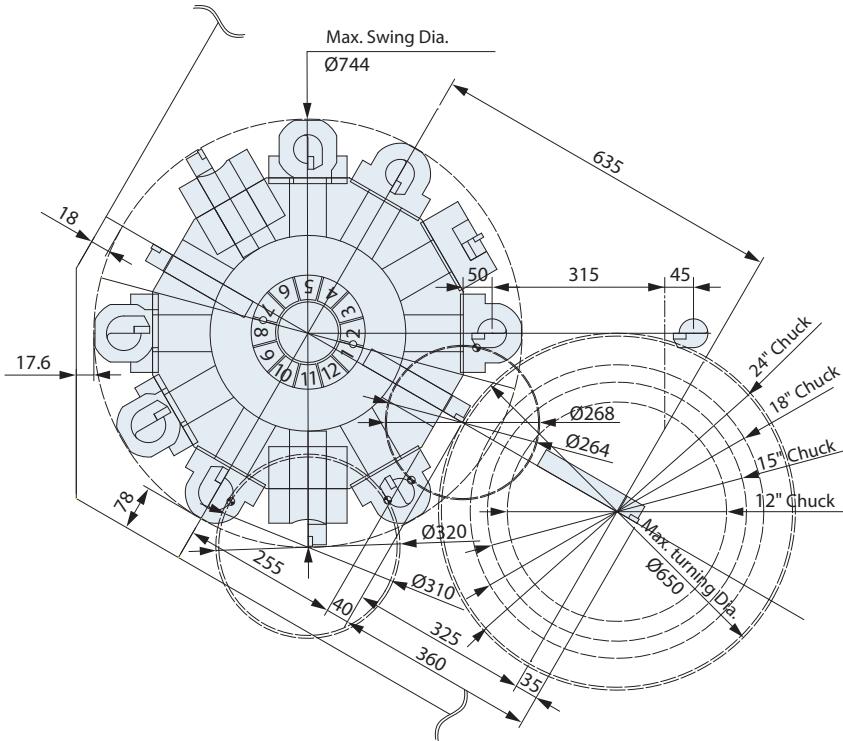

- ▶ The Y-axis control further enhances multi-tasking live tooling capabilities and improves various machining precision. High precision grooving and X-axis off-center drilling are enabled.
- ▶ On Y-axis equipped machines, the turret is mounted on a secondary 30 degrees wedge saddle on top of the X-axis slide. Both X and Y axes have extra wide hardened and ground box way that are directly formed onto the saddles during the casting process. They are precision machined and widely spaced for maximum strength.
- ▶ With an abundant amount of Y-axis travel, $120 \text{ mm} = \pm 60 \text{ mm}$ ($4.72" = \pm 2.36"$), a wide variety of parts may be efficiently machined.
- ▶ Live tooling turret for Y-axis machine is equipped with 5.5 kW output, high precision built-in spindle turret.

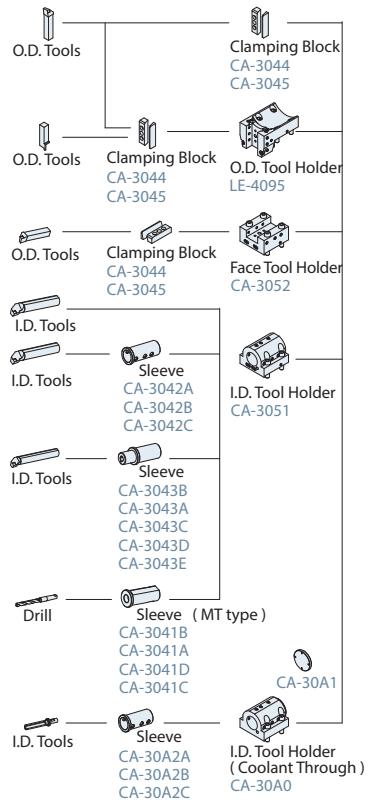

- ▶ Grooving with Y-axis control produces grooves with higher accuracy.

STANDARD FEATURES

Fully Enclosed Guarding

- ▶ GS-4000 series
- ▶ GS-4000L / GS-4000L² / GS-4000L³ series

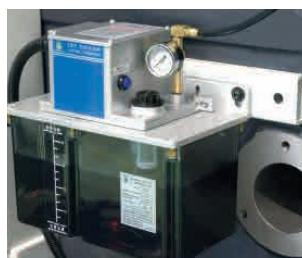

Chip Conveyor

- ▶ GOODWAY can provide the best solution according to different material. Hinge type chip conveyor for iron chips. Scraper type chip conveyor for cooper, aluminum and cast iron chips.

Lubrication System

- ▶ The lubrication unit monitors preset pressure levels detect leaks in the system.
- ▶ Copper lubrication lines will not corrode or become brittle over time.

3-Jaw Chuck w/ Soft Jaws × 1 set

- ▶ Standard 3-jaw hydraulic chuck with soft jaws is able to work with various types of work-pieces.

Heat Exchanger

- ▶ The heat exchanger provides the electrical box with good air circulation to efficiently lower the interior temperature and stabilize the electrical devices.

Tri-color Status Light

- ▶ The tri-color status light enables the machine's status to be checked without having to stand at the control panel, and the screen and work lights are shut off to conserve power.

OPTIONAL FEATURES

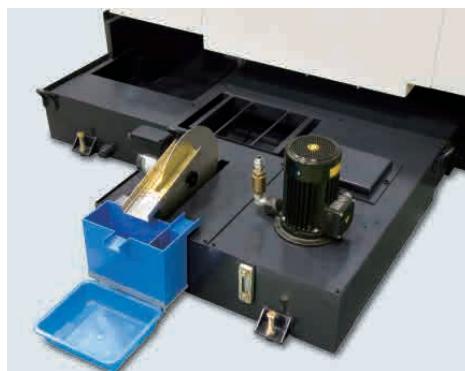

Bar Feeder

- The optional bar feeding systems feed bars with a diameter up to Ø105 mm, and the BF-65 can handle bar diameters of up to Ø 65 mm.

Larger Coolant Tank Capacity

- The Coolant tank allows the connection of compressed air to circulate coolant and keep it fresh when the machine is not in use. (Opt.)

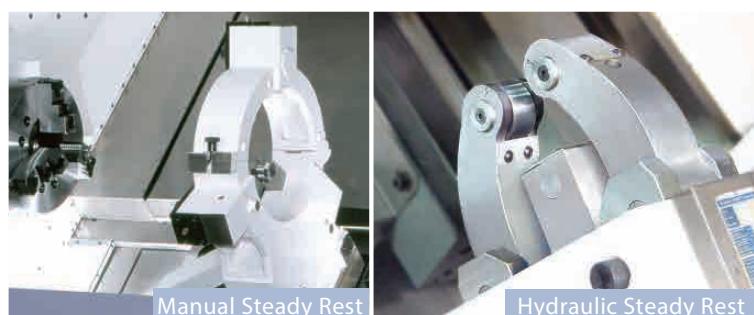

Separate coolant tank & Oil skimmer shown

Tool Setter

- The optional Renishaw HPRA tool presetter simplifies the machining setup.

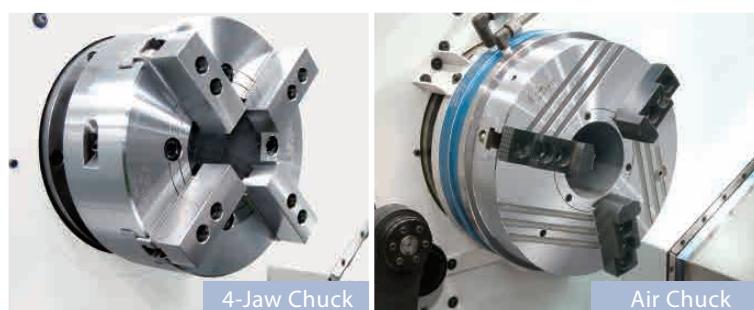

Manual Steady Rest

- It can be manually adjusted and requires less space than hydraulic steady rests.

Hydraulic Steady Rest

- The hydraulic pressure is controlled by the program to increase working efficiency.

4-Jaw Chuck

- The 4-jaw chuck can work with complex-shaped or non-circular materials that cannot be done by 3-jaw chucks.

Air Chuck

- As opposed to a hydraulic chuck, the air chuck can work with soft or thin material to prevent deformation.
