

The Sustainability Data Room

Your all-in-one solution for EU sustainability regulations

What is the Sustainability Data Room?

The Sustainability Data Room combines three integrated modules that cover the entire data process – from extraction to reporting and dashboard creation – all fully aligned with each other:

1. Data Room – SAIFTY

- AI-powered data extraction from regulatory data sheets (e.g. SDS)
- Data transformation for SAP compatibility and advanced analytics
- Linking product data with transactional data such as sales and logistics

2. Reporting & Analytics – SAP Analytics Cloud and Sustainability Control Tower

- Customizable templates for EU Taxonomy & CSRD
- Holistic sustainability performance tracking
- Interactive dashboards and tailored KPIs

Additional Outputs – Digital SDS

- Compliance with ESPR regulations
 - Automated creation based on structured product and substance data
-

Easily implement EU Taxonomy, CSRD reporting, Digital Product Passports & more

EU sustainability regulations pose major challenges for companies and often lead to significant administrative effort.

The Sustainability Data Room simplifies and automates key steps – providing a solid foundation for CSRD reporting, EU Taxonomy compliance, and the Digital Product Passport. In addition, it goes beyond traditional reporting tools by integrating product, sustainability, and business data into one central platform.

Your benefits

- ✓ Increased efficiency through automation
- ✓ Reduced manual workload
- ✓ Regulatory clarity and legal compliance
- ✓ Industry-oriented design: Optimized for companies in the chemical sector
