

SPECIALIST GLOBAL LOGISTICS

Project Work Case Study

COMPREHENSIVE PROJECT LOGISTICS

From initial planning through to final delivery, Unsworth provides end-to-end freight forwarding solutions for specialist project cargo, ensuring complex movements are delivered safely, compliantly and on schedule.

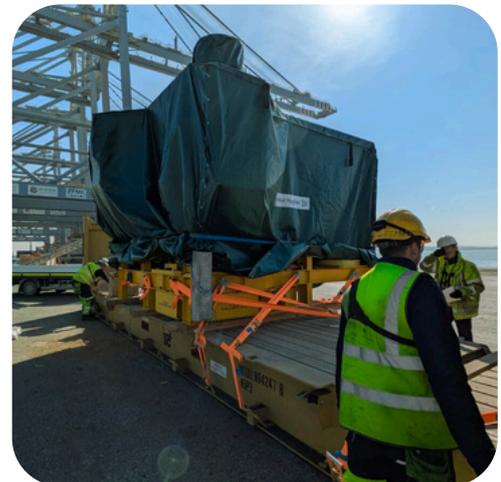

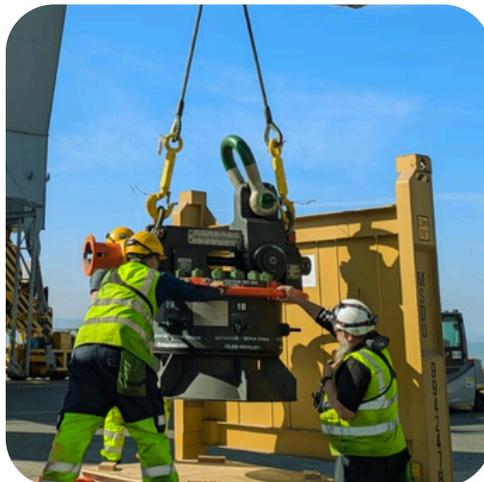

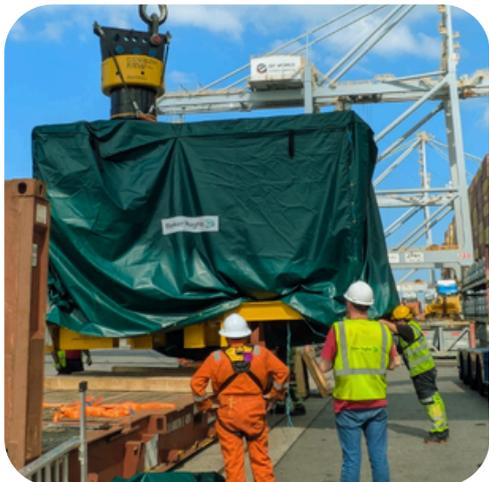

Every project brings unique challenges – from cargo configuration and equipment planning, through tight mobilisation timelines and coordination across multiple partners.

We work closely with our customers to understand the operational drivers behind each assignment and develop tailored logistics solutions that align with wider project goals.

Our experienced team is involved from the earliest planning stage, helping identify risk factors, sequencing movements and making sure the right resources are in place ahead of time.

How we did it

Working closely with London Gateway stevedores, the Supplier, and the customer, our team used a gantry crane for safe vessel loading. Precise planning and coordination across the UK, Ghana, and Norway, including site visits in Scotland and supervision at key stages ensured smooth execution. Weekly updates maintained clear communication, keeping the project on schedule. The operation, which began in February 2025, was completed on time by mid-July.

Project Support in Ghana

Unsworth UK managed a high-profile, time-sensitive shipment from the UK to Takoradi, Ghana, including 8 out-of-gauge flat racks and 6x40' High Cube containers. Three flat racks required specialist handling due to their size (4.14m / 31,360kg) and removable lifting caps for inland transport. We supported:

- Site collection
- Containerisation
- Port operations
- International shipping
- Inland delivery at destination

Close collaboration with our overseas partner was essential to manage customs clearance, onward inland transport and final delivery in Ghana.
