COMPREHENSIVE PROJECT LOGISTICS

Unsworth coordinated the urgent movement of oversized air freight requiring a nose-door aircraft loading operation, enabling cargo too large for standard aircraft doors to be safely loaded and transported.

The shipment consisted of multiple oversized units weighing several tonnes and measuring well beyond standard air freight dimensions. This meant the cargo required specialist aircraft handling and nose-door loading capability.

Careful planning ensured the oversized freight was loaded safely and efficiently, while continuous communication with partners provided full visibility throughout the entire journey.

The project highlights Unsworth's ability to manage complex, oversized air freight movements requiring specialist aircraft operations while maintaining speed, precision and transparency for clients.

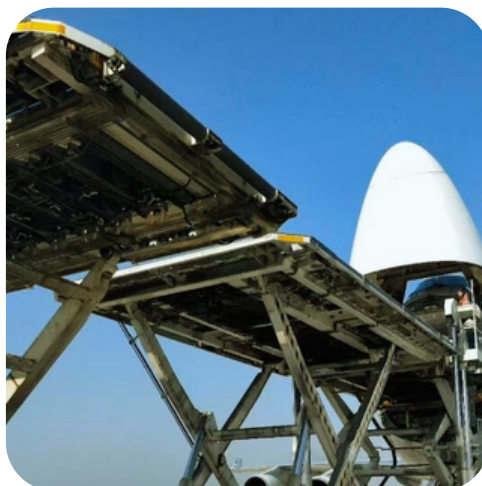

The Challenge

Several operational challenges had to be managed during the process:

- Oversized cargo dimensions meant standard aircraft loading procedures were not suitable.
- The shipment had to be routed via Frankfurt instead of directly into the UK, which added an extra layer of complexity to the logistics planning and onward transport.
- Multiple pieces (including cargo exceeding 4,900kg in total weight) required precise planning for aircraft loading and handling.
- Flight schedules were adjusted during transit, requiring close monitoring and communication with partners to maintain the timeline.

How we did it

- Arranged specialist aircraft loading using a nose-door operation for oversized cargo.
- Coordinated closely with overseas agents to manage loading procedures and documentation.
- Monitored flight schedules and provided real-time updates throughout the shipment.
- Managed the routing via Frankfurt and organised follow-on transport to maintain delivery timelines.
- Ensured all customs and documentation requirements were handled in advance to avoid delays.
