

Citizen AI by Secure Code Warrior

For the workforce that builds with AI, not just the developers who deploy it.

AI has taken hold across every business function, not just engineering. Employees use AI tools to create content, automate workflows, analyze information, and support business decisions — often without the training to do it securely.

Citizen AI by Secure Code Warrior changes that. It builds AI literacy, security awareness, and responsible habits, so your organization can expand AI use confidently and prove responsible adoption when it counts.

AI risk doesn't stop at the engineering team

Most AI governance initiatives focus on policies, platforms, and technical controls — not the people using AI every day.

Without practical education, employees across marketing, finance, HR, operations, and customer-facing teams can unintentionally expose sensitive data, grant excessive permissions, or trust inaccurate outputs. Citizen AI gives them the knowledge and confidence to use AI safely, responsibly, and effectively.

What's included

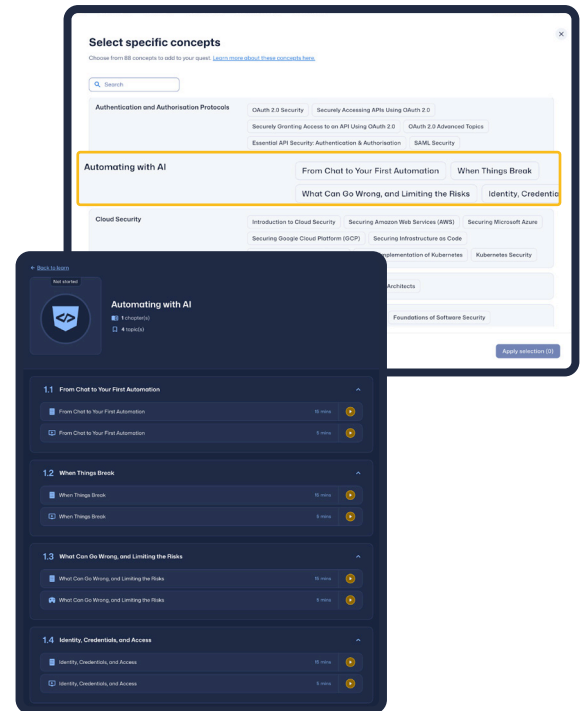

Assign Citizen AI through Quests and Learn in the Secure Code Warrior platform, right alongside your existing programs.

Automating with AI

- ✔ **From chat to your first automation:**
Understand how AI automations work and safely build your first workflow.
[Guideline](#) [Video](#)
- ✔ **When things break:**
Learn how to troubleshoot AI automations and know when to escalate.
[Guideline](#) [Video](#)
- ✔ **What can go wrong, and limiting the risks:**
Identify common AI risks and the practical habits that help reduce them.
[Guideline](#) [Interactive Walkthrough](#)
- ✔ **Identity, credentials, and access:**
Learn how AI agents use permissions and why access management matters.
[Guideline](#) [Video](#)

Why Citizen AI?

- ✓ **Built for business users:**
 Designed for the people who use AI at work every day — not developers or data scientists. Scenarios, examples, and exercises reflect real business workflows, not technical ones.
- ✓ **Practical, role-based learning:**
 Focuses on the AI tools, workflows, and automations employees use every day.
- ✓ **Focused on behavior, not just knowledge:**
 Builds practical judgment and responsible habits — the kind that change how employees actually use AI, not just what they know about it.
- ✓ **Available in the Secure Code Warrior platform:**
 Assign learning, track completion, and support enterprise AI governance alongside your existing programs — all in one place.

Deployment & availability

Citizen AI is a standalone AI literacy program for non-developer employees, available globally in all 9 supported spoken languages.

Delivered through the Secure Code Warrior learning platform, Citizen AI can be assigned through **Quests and Learn** alongside your existing learning programs.

Pricing starts at \$20 USD per user, per year with a 1,000-user minimum purchase. Volume discounts are available for larger deployments, with enterprise pricing designed to support organizations ranging from 1,000 to 50,000+ users.

9 SUPPORTED SPOKEN LANGUAGES

- English (US & UK)
- Spanish
- French
- German
- Korean
- Chinese (Simplified & Traditional)
- Japanese

About Secure Code Warrior

Secure Code Warrior is a leader in AI software governance and developer security upskilling, enabling enterprises to control AI-driven software development across the SDLC. Built on a decade as the leading secure coding training platform, it brings together AI visibility, governance, and hands-on learning to prevent vulnerabilities and improve software quality before production.
