IN PURSUIT OF **100%**
**SUBSURFACE
DAMAGE
PREVENTION**

We are not satisfied with our current accuracy rate of 99.8%. We are in pursuit of 100% ■

**WIDENING
THE
GAP**

We seek to widen the gap between GPRS and the industry norm for subsurface damage prevention ■

**SAFETY
ALWAYS ON
OUR RADAR**

We strive to keep our clients safe and free from damage & injuries ■

**WHAT'S
UNDERNEATH
MATTERS**

We choose team members who exemplify our core values as they work to locate your subsurface hazards ■

GPRS CAN HELP

AS-BUILT CREATION

As-built data has never been more accurate than with 3D laser scan technology. 3D laser scanning captures exact building dimensions, locations, and layout; information that is crucial to the success of your project. Items are often moved, added or removed from the original plan. As-builts are invaluable in design, construction, renovation and facility modifications ■

3D BIM MODELING

3D BIM models are accurate digital representations of a building or site to facilitate design, construction and operational processes. 3D BIM models provide clients with the ability to break down architectural, structural and MEP building features and see how they fit into a single finalized structure. Users can isolate and alter walls, columns, windows, doors, etc. to support the planning and design needs of any project ■

CLASH DETECTION / PREFABRICATION

3D laser scanning captures as-built site conditions with a high level of precision, helping to identify potential clashes, fabricate components and plan a flawless installation. Information can be shared with other teams to ensure everyone is on the same page and can coordinate their work effectively. This saves time, money and headaches by preventing costly modifications in the field ■

AERIAL DRONE VIDEO AND PHOTOGRAMMETRY

GPRS/TruePoint has FAA-licensed pilots to aid in capturing aerial video, building and property data, and providing photogrammetry services. GPRS/TruePoint utilizes drones equipped with HD video and HD photo cameras. We offer safe, accurate, and cost-effective data collection, ensuring positional accuracy in vast, dangerous, or hard-to-reach areas ■

TruePoint

GPRS is the leading infrastructure mapping company – intelligently visualizing the built world.

TRUVIEW PANORAMIC IMAGE

MAPS & MODELS

Our team of in-house designers, architects, and CAD technicians can produce custom maps & models for your project, ranging from point cloud data to 2D drawings and 3D models. Maps and models can be provided at any level of detail in a variety of formats, including Revit, AutoCAD, ReCap, Navisworks, Civil 3D, BIM 360, A360, FARO As-Built, JetStream Viewer, and NavVis.

- Point Cloud Data (Raw Data)
- 2D CAD Drawings
- 3D BIM Models
- 3D Mesh
- TruViews
- Advanced Analysis and Calculations
- 3D Virtual Tours
