INVESTMENT INFRASTRUCTURE  
AT SCALE

CASE STUDY

# The infrastructure behind institutional-scale investment flows

Managing capital across hundreds of LPs and SPVs shouldn't  
require a team of people manually chasing wires

Treasury Prime gives investment platforms multi-bank redundancy, instant traceable transfers, and compliant account opening — built to move at the speed your deals demand.

**One of our consumer card programs went from zero to 2.35 million accounts in under 60 days. Here's the infrastructure that made it possible.**

# This is what institutional-scale investment infrastructure looks like in production.

This platform didn't just build a great platform — they built one that moves billions, onboards thousands, and never lets the banking layer become the bottleneck.

## \$1.09B

TOTAL DEPOSITS UNDER  
MANAGEMENT ACROSS  
BANKING PARTNERS

## 192K

ACCOUNTS ACROSS LP  
WALLETS AND SPV  
ENTITIES

## 3 banking partners

DISTRIBUTING RISK AND UNLOCKING DISTINCT  
PRODUCT CAPABILITIES

**International Payments:** Supports cross-border payments and global businesses with capabilities including accounts, ACH, cards, network transfers, and international wires.

**Enhanced FDIC Coverage:** Ideal for fintechs that want to offer expanded deposit insurance coverage alongside full banking functionality including accounts, ACH, wires, and network transfers.

**Tier 1 Bank Credibility:** Top 10 bank providing core infrastructure such as accounts, ACH, and wires for fintech programs that benefit from a large institutional banking partner.

# The bigger your platform gets, the more your banking infrastructure has to do — and the more painful it is when it can't.

High deposit concentration creates risk your LPs shouldn't have to think about. Slow, untraceable capital calls erode GP confidence. Manual onboarding workflows become a tax on every new relationship you add.

**TREASURY PRIME REMOVES THOSE CEILINGS.**

## **ONEKEY MULTI-BANK ARCHITECTURE**

Distribute deposits across multiple banking partners so no single institution's risk appetite, or product limitations, ever becomes your ceiling. When you're managing over a billion dollars in assets, concentration isn't just inefficient. It's a liability.

## **NETWORK TRANSFERS**

Give every capital call a timestamp and a full paper trail.

## **FLEXIBLE KYC/KYB STACK**

Configure compliance flows for LPs, SPVs, and operating entities.

## **SPEEDY ACCOUNT OPENING**

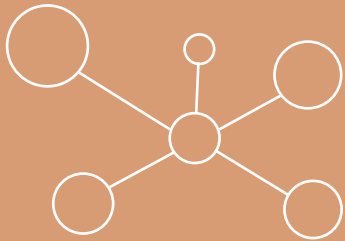

So new relationships go live in minutes, not weeks.

# From capital call to close — in minutes, not days.

Every step in the investment flow is designed to move fast, stay clean, and give everyone — GPs, LPs, and ops teams — exactly the visibility they need.

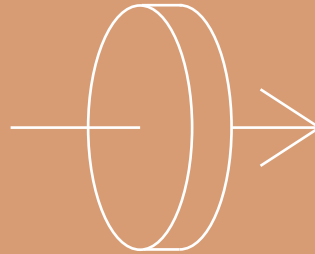

# This is what your investment infrastructure should look like at scale.

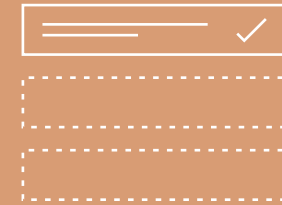

## NO SINGLE POINT OF FAILURE

Deposits distributed across multiple banking partners from day one — so concentration risk never becomes a ceiling on your growth.

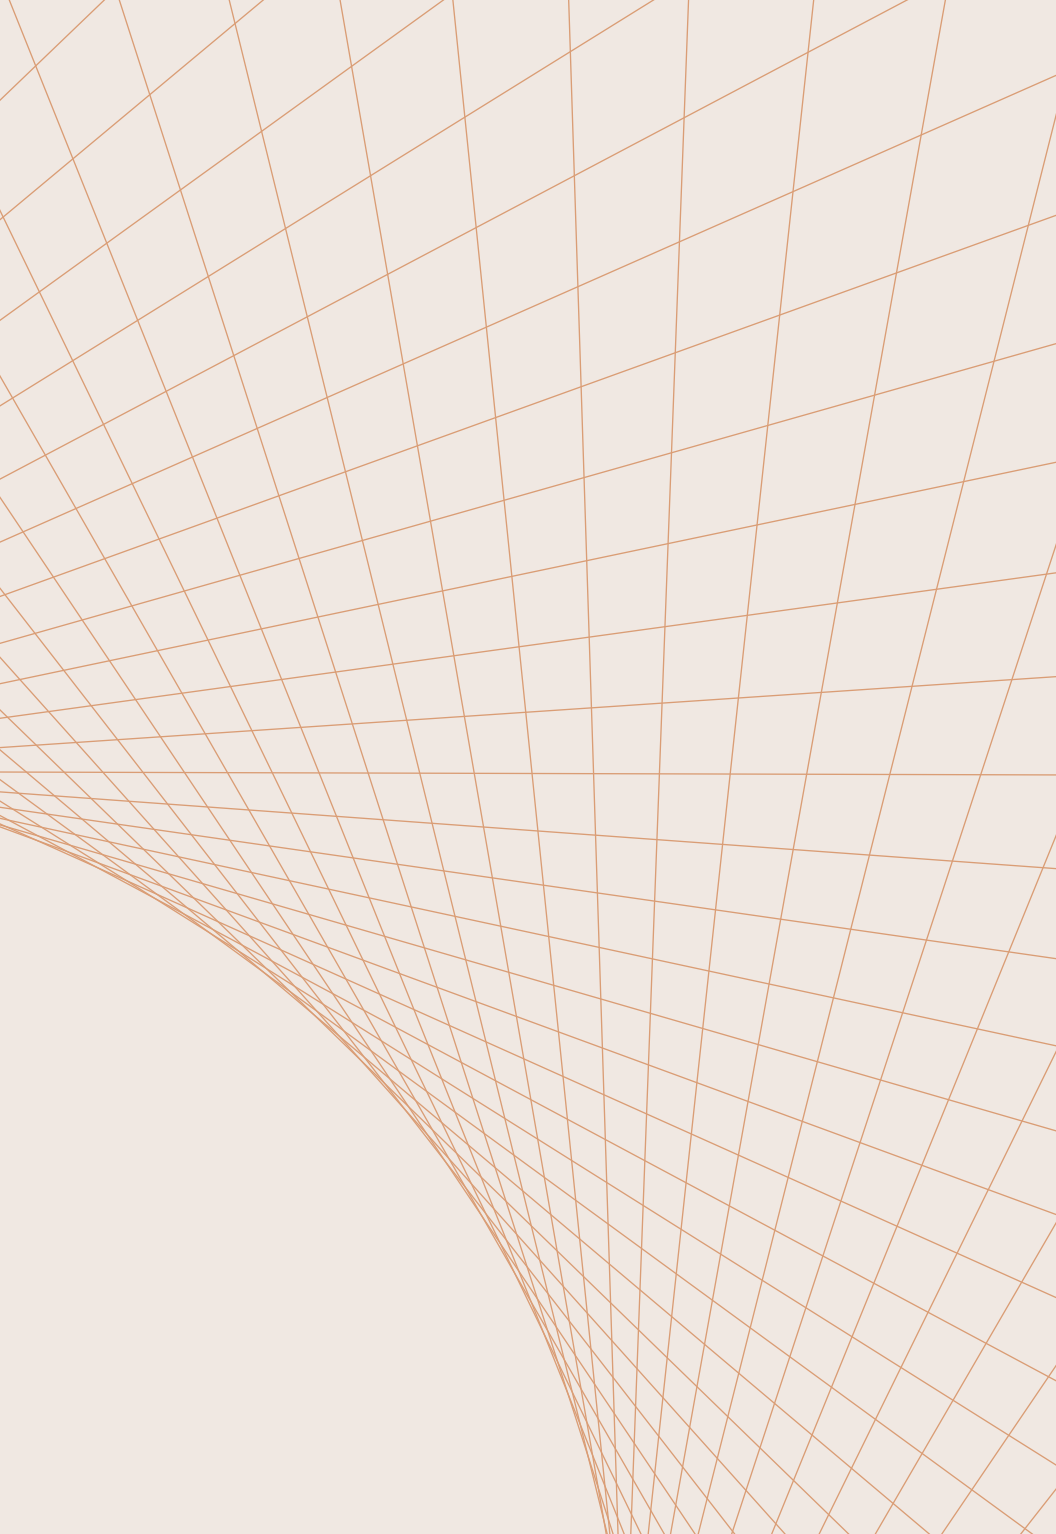

## CAPITAL THAT MOVES AT DEAL SPEED

Instant LP-to-SPV transfers with full attribution baked in — no reconciliation lag, no confirmation chasing, no ops overhead eating into your margins.

## ONBOARDING THAT CONVERTS

Custom KYC workflows built around how LPs and SPVs actually move through your funnel — so compliance accelerates growth instead of fighting it.

**Built to move at the speed  
of your deals. Don't let  
your banking  
infrastructure be the  
reason a deal slows down.**

Let's talk.
