

Surgery Requires Better Operations.

SURGERY REQUIRES BETTER OPERATIONS

Help your team stay on-time with live OR data.

Advancements in surgery are only as good as your whole team's ability to keep the operating room running as smoothly as possible: on-time, efficient, and agile. All day, your surgery schedule relies on the type of predictability and decisiveness that can only come from real-time data and optimizations.

With Apella's OR platform, you get up-to-the-minute scheduling, reduced turnover lag, and source-of-truth coordination so you can serve your patients and get home without delay.

Real-time notifications synced across systems

Why make guesses about how your day will shape up that may compromise quality? Stay informed with text notifications on case start times. Apella alerts the surgical team on the latest developments in real time, ensuring you're always prepared for the next procedure. The Apella platform seamlessly synchronizes live updates from your EHR system to minimize wasted time and keep everyone on the same page.

- **SMS-based** notifications keep surgeons updated.

Predictable scheduling and turnover time reduction

If you're responding to new information and changes all day, why isn't your schedule able to keep up? Apella's case duration intelligence dynamically forecasts daily schedules according to deep learning about your actual caseload, identifying turnover issues as they happen. By both improving the accuracy of your schedule and making efficiency improvements throughout the day, you can have more confidence in your calendar and even add more cases when optimal.

- **15% faster turnover** achieved across diverse settings, from large academic hospitals to community-based ones.

Data you can trust, insights you can act on

Does it feel like no matter how efficiently you work, interruptions and misalignments keep you from ending your day on time? Apella uses computer vision analysis of video feeds to automatically identify delays and recommend optimizations to your daily operations. The most comprehensive data, collected directly from the OR, gives your entire team the power to know where routine mistakes are slowing down performance and make better-informed decisions.

- **24% more accurate live schedule** compared to the industry-leading EHR system.
