

SNAPSHOT OF SNAP-PY

A Worldwide Adaptive Platform Research Trial

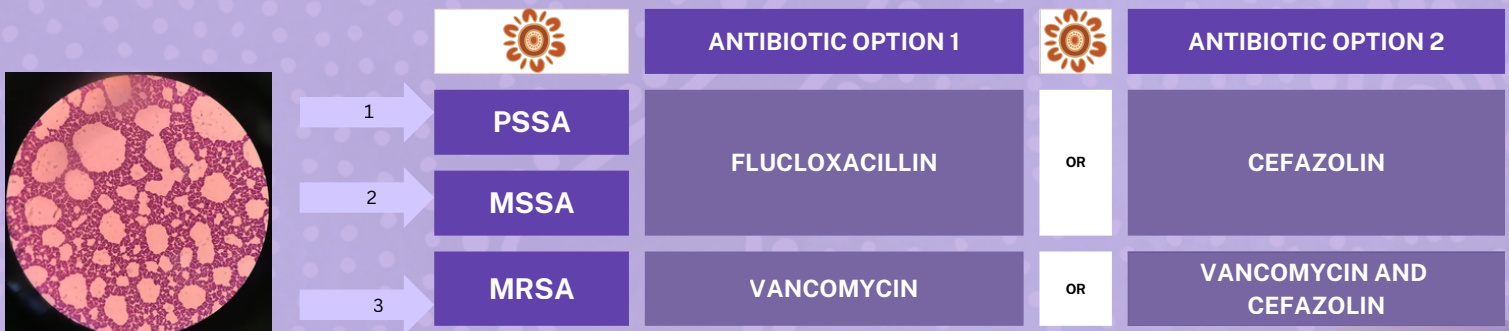

Why you are here

You're feeling unwell because you have an infection called **Staphylococcus aureus**. Your family might know it as 'Golden Staph'. There are 3 different Staph aureus germs; **MSSA, PSSA, MRSA** and you have _____.

Why are we here?

The SNAP-PY trial is a research trial that looks at the **best medicine(s) to make you feel better quicker!** We're asking you if you would like to participate in the trial? There are **no additional tests**, only what your doctor sends for as standard treatment. A computer will generate your medicine to treat your (PSSA/MSSA/MRSA).

You don't have to consent now, we can come back later while you and your family think about it. If you/your family decide not to participate, that is ok. **All care will be of high standard.**

Things to keep in mind!

If you **need an interpreter**, please let us or your Nurses and/or Doctors know.

All medicine can make you feel unwell and yuk at the start. You may feel **yuk in the tummy, or have runny poo** - it's important to share this with your family and the Nurses and Doctors.

If you do decide to take part in the trial, you are free to withdraw at any time without giving a reason.
