

Power and controls made easy

Installing power and controls for a lighting project can be time consuming and challenging. In fact, these components are responsible for the majority of support calls we receive. Don't let this part of your project slow you down - hit the easy button and choose Evo-Lite's affordable Power & Control Board solutions.

Pre-mounted

We mount every component in a neat and compact configuration.

Pre-wired

No need to decipher complicated wiring diagrams, everything is pre-wired.

Quick Install

Save hours - just connect your lighting circuit and add line voltage* - that's it!

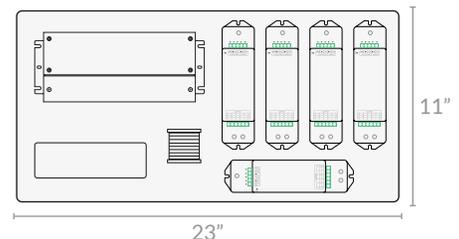

Quality Assured

Every board is tested prior to shipment, guaranteeing flawless performance.

Configurations & options

The standard configuration measures 23 inches wide by 11 inches tall. Multiple NEMA Rated power supply options allow for one, two, or four 96 watt circuits per board. Control components are determined by your control preferences. We also offer **custom configurations** (additional costs may apply) for those that need specific sizes, configurations, product placement, or other unique builds.

**Notice: All line voltage (AC) connections must be performed by a licensed electrician.*
