ADVANCED LUMINOUS SOLUTIONS

**INDUSTRIAL
CONTROL PANELS**

INDUSTRIAL CONTROL PANELS

CUSTOM BUILT FOR YOUR PROJECT

Tailor-made to fit your lighting system's voltage, wattage, circuitry, fusing, and control needs.

THE ULTIMATE TIME-SAVER

Eliminate the errors and time-consuming process of wiring dozens of lighting system components together.

BUILT-IN COMPLIANCE

Efficiently designed construction built per manufacturers' component guidelines, UL standards, and Class 2 regulations.

POWER INPUT SIMPLIFIED

Requires just a single line voltage connection to power your entire system. (Completed by licensed professional).

NO MORE GUESS WORK

Preconfigured system eliminates potential wiring errors made by those unfamiliar with low voltage lighting components.

SPACE-SAVING SOLUTION

Make your electricians, carpenters, and architectural designers happy with this easy-to-install, space-saving unit.

RATINGS & CERTIFICATIONS

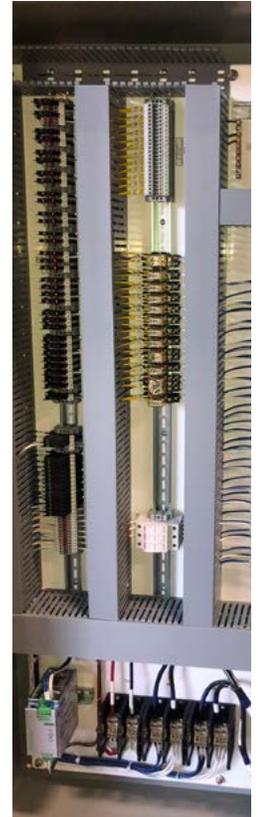

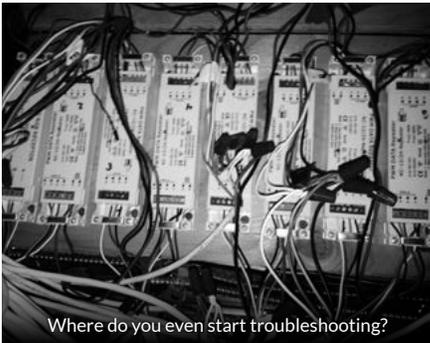

UL Listed 508A certified. Other specific ratings such as ingress protection (IP) or NEMA 3R ratings available.

The Professional Solution for Integrated Lighting Systems

Typically large-scale lighting systems require many power supplies and control devices. Our Industrial Control Panels (ICP's) combine the power, circuiting, and control components required by your lighting system into one compact, professional solution. These enclosures offer incredible time and labor savings. Be sure to specify an Industrial Control Panel on your next project!

What Would You Rather Have?

Typical low voltage systems

Multiple drivers can require multiple controllers or repeaters, thus increasing the number of components needed. This requires significantly more installation time.

Each connection must be made correctly and with full contact for everything to function properly. Otherwise, electricians will likely be called back to troubleshoot the problem - is it a wiring issue or an equipment issue?

More components means more maintenance, more potential points of failure, and more time needed for troubleshooting.

Industrial Control Panels (ICP's)

Our ICP's include all the necessary devices, circuiting, and fusing specifically required by your project's total wattage, control needs, and power location.

This UL Listed, UL 8750 approved, Class 3 compliant electrical enclosure arrives with components pre-wired. Low voltage circuits and connection points are clearly identified.

ICP's consolidate all devices which makes it possible to streamline the number of components - reducing future maintenance costs.
