

Feature Guide

Everything Inside Navigator.Ai

Powered by

MyAutoCompanion

A guide to every tool in Navigator.Ai - what it does,
and which part of your dealership it is built for

Not AI for the sake of AI. Practical intelligence built around
real dealership operations.

What's Inside

Automotive Intelligence isn't one single feature, it's a set of AI tools built directly into DMS Navigator, across Sales, Aftersales and Accounts. Here's what each one actually does.

- 01

SALES

Sales Ai

An AI agent that takes enquiries from your website and other in bound digital sources, replies immediately, and nurtures the lead for up to 60 days, handing over to a live sales exec once the prospect shows higher intent.
- 02

SALES

Sales Chat

An AI-powered live chat agent for your dealer website, with full access to current stock, specifications and dealership information. Captures customer details and hands warm leads straight to a sales exec in Sales 360.
- 03

SALES

Sales Intent Measurement

Every sales enquiry is continuously reviewed by AI and assigned a buyer intent score, visible on each enquiry and in Sales Management reporting, so your team can prioritise the highest-value prospects first.
- 04

SALES

Sales Email Suggestor

A one-button AI agent that reviews a sales enquiry and suggests a professionally written email response, fully editable before sending, helping every exec communicate more consistently.
- 05

AFTERSALES

Work Description AI

Automatically rewrites workshop job descriptions into clear, professional language for customer-facing invoices — turning technician shorthand into polished summaries that build customer confidence.
- 06

AFTERSALES

Technician Voice Notes

Advanced text-to-speech in the technician app lets technicians dictate job notes verbally instead of typing or writing. AI transcribes accurately even in a workshop environment.
- 07

AFTERSALES

Automated Parts Goods In

Photograph or upload apart delivery note and AI reads and interprets it automatically — goods-in happens with no manual data entry, and stock levels update instantly.
- 08

ACCOUNTS

Automated Purchase Invoice Processing

Purchase invoices can be uploaded manually or picked up automatically from a monitored inbox. AI extracts supplier details, line items, quantities and values for one-click processing.

See how these fit together in your dealership

Every feature above is part of one connected
system not a bolt-on extra.
