## QliqCHAT

**Version 2.5.510**

## Desktop App

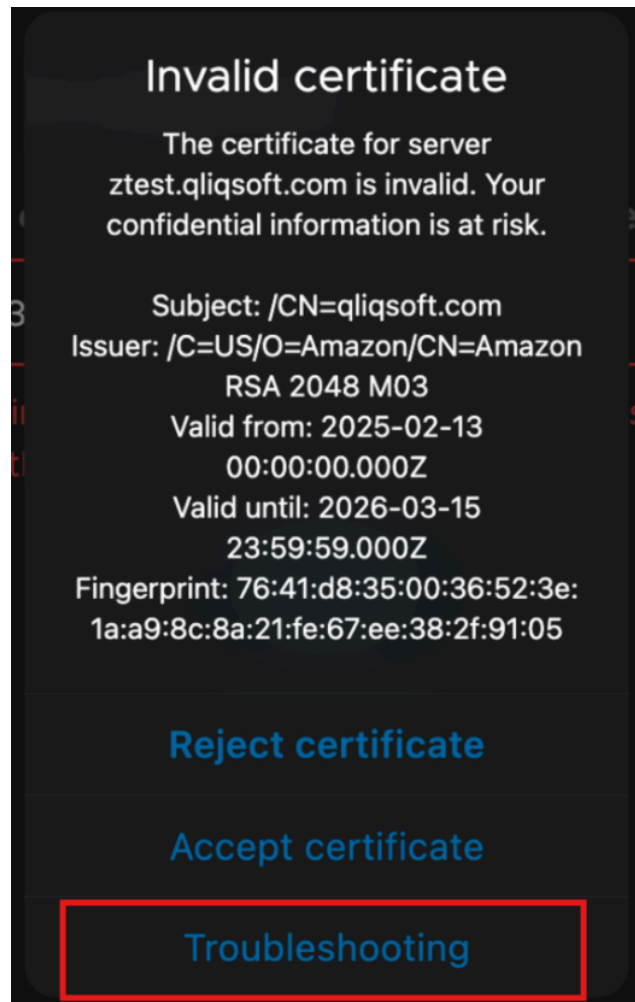

### Bug Fixes

- User notification chime preferences, reminder intervals, and notification volume settings now persist after logging in again.
- Message details are now not available when forwarding a message.
- The application now starts correctly on subsequent launches after selecting "Quit the app".

## Mobile App

### Improvement

- There is a new button that directs users to the troubleshooting page when an invalid certificate error is detected. This links to a [blog](#) that explains QliqSOFT's certificate approach and how to troubleshoot an invalid certificate issue.

### Bug Fixes

- User notification chime preferences, reminder intervals, and notification volume settings now persist after logging in again.
- Message details are now not available when forwarding a message.
- The app now handles Snap & Sign actions reliably without unexpected shutdowns.
- Thumbnails now load consistently as expected.
- Users can now share photos to QliqCHAT on devices running the iOS 18+ update.
