

# Launch Zearn Math for Leaders

## District and School Leaders Grades K-5, 6-8

### Session Objectives

In this session, participants will:

-  understand how Zearn enables all students to engage with grade-level math, with built-in support to catch up and move forward
-  learn about usage recommendations for students and staff so you can communicate clear, actionable expectations grounded in program guidance
-  implement data routines to monitor overall implementation, then support as needed
-  establish school- or district-wide systems including support structures for students & teachers and celebrating weekly lesson completion on Zearn

**NOTE:** This **90-minute** session is intended for district and school leaders and is the first in a series of two foundational trainings.

### Session Overview

#### Launch Zearn Math for Leaders (90 minutes)

During this session, participants will:

- explore how Zearn's design helps math make sense
- walk through a Digital Lesson to experience the balance of fluency, guided practice, and independent practice
- understand the built-in features and multiple layers of scaffolded supports for all learners right when they need it
- learn usage recommendations that drive impact for all students
- discover the data routines leaders use to monitor implementation and support classrooms or schools
- explore a case study to practice using data and determine which classrooms should be celebrated and which may need more support
- hear key actions leaders can take to support during early implementation
