What ‘integrates with Confluence’ really means

Meetical

Getting meetings into Confluence, from invite to follow-up

Confluence app (Meetical)	**Steps 1 to 5 and the next meeting, automatically**		
Notetaker + connector Fireflies, MeetGeek …	Partly agenda on demand	**From the recording**	Partly recap by email
Built-in meeting notes template	**By hand**		**By hand**

Which one fits you?

A Confluence app, if …

- your meetings start with an invite and an agenda
- most of them are recurring series
- pages must follow your templates and team spaces
- the page should change when the meeting does

A notetaker is enough, if …

- your meetings start with the recording
- most of them are one-off external calls
- a summary after the call is all you need
- every action item must become a Jira issue automatically (Fireflies, MeetGeek, Fellow do that today)

Rule of thumb: if more than half of your meetings are recurring series, go native.
