

Human Bone Allografts

All human bone-derived allografts are meticulously processed under tightly controlled, validated procedures to ensure the bone tissue is effectively cleaned and sterilized while preserving its native biomechanical structure. Our proprietary demineralization process has been validated to induce a positive in vivo osteoinductive response.

SurMatrix® Demineralized Cortical Fibers

Advanced Bone Grafting Solution

SurMatrix® Demineralized Cortical Fibers offer a sophisticated bone grafting solution designed to support a wide range of surgical procedures. This advanced allograft provides enhanced malleability and osteoinductive potential. When combined with Cancellous Chips, this advanced graft provides additional handling characteristics, widening the scope of use. Meticulously processed to preserve the biomechanical properties of the tissue.
