

WELCOME TO THE KITCHEN

The industrial production of furniture and kitchen cabinets was just beginning when master carpenter Wilhelm Eggersmann founded his joinery shop in 1908.

Primarily, it was the craftsmanship of the carpenters that determined the quality of the kitchen furniture which at that time was mainly kitchen sideboards.

Over the years, the process of industrialization made great advancements.

In contrast to many other kitchen manufacturers entering the market, Eggersmann's passion was focused on the highest possible degree of individuality and not on mass production.

Now, more than 100 years later, carpentry skills are still the base of our manufacturing process while using the most modern machine technology.

In this manner we are able to produce our bespoke and luxurious kitchen systems.

Eggersmann creates valuable unique products for discerning clientele.

Sustainability determines our actions. eggersmann sets the benchmark regarding responsible handling of wooden materials and of the environment.

We are the first German industrial kitchen system manufacturer certified according to the strict requirements of the FOREST STEWARDSHIP COUNCIL® (FSC®).

FSC® is the most renowned and extensive certification system for responsible forestry worldwide. FSC® prevents overexploitation on a global level, protects rare species and obviates human rights violations. The triple-layer furniture boards used for our carcass and front materials are certified according to the strict emission requirements as per CARB II (California Air Resources Board) and the formaldehyde emission of less than 0.05 ppm is well below the permitted European limit value of emission class E1 (0.1 ppm).

Sustainability also determines our design approach.

Our kitchen systems are designed for a long service life which requires exceptional and timeless product design.

Furthermore, original ideas drive us to develop new products, making eggersmann one of the most recognized top innovation leaders in the kitchen industry.

Numerous international awards for innovations are testament to this. We are proud of our accomplishments and are committed to creative thinking.

This will help us to design the perfect kitchen of tomorrow with honest and genuine materials and the high expectation of designing something unique for its users.

Front finish reverse side:	matching veneered
Front thickness:	19 mm
Front base:	triple-ply chipboard
Front weight:	12.9 kg/m ²

3566 honey oak

Wood is a natural product and subject to variation of color and graining. Slightly differences in color intensity and grain structure of the veneer are preserved as natural characteristics for this handmade finish and feature the furniture parts their unique charisma. It follows, therefore, that there will be differences between samples/images and the respective delivery of the wood items. Please also note that exposure to sunlight will lead to changes in color.

DGL grip channels, plinth panels and ceiling fillers are delivered with a horizontal grain as standard.

Oiled real wood surfaces

Oiled real wood surfaces are more susceptible to moisture than lacquered wood finishes. Standing liquids can penetrate the wood and cause stains. Make sure to wipe up any spills immediately and use trivets for horizontal applications to minimize the effects of moisture.

Regular care of your oiled real wood surfaces is crucial, to preserve their beauty and durability. Inspect the wood regularly for damage and, if necessary, carry out the maintenance care according to our care instructions.

For additions to a delivered kitchen, a reference sample from the first delivery must be is required prior production. 5765 Eucalyptus silver, horizontal, high-gloss lacquered on all sides

NOBLE VENEER COLLECTION HIGH-GLOSS

Front finish:	Noble wood veneered fronts feature veneers from precious and unusual trees.
Edges:	1 mm edges on all sides
Front finish reverse side:	veneer grain may not be matched and due to the precious nature of some veneers may be of lesser grade veneer
Front thickness:	19 mm
Front base:	triple-ply chipboard
Front weight:	13.2 kg/m ²

The veneers of the NOBLE VENEER COLLECTION are hand picked and are grain matched or book matched according to required approved samples.

A veneer sample approval is required prior to producing furniture with NOBLE VENEER COLLECTION.

The sample will be produced 400 x 400 mm on 6 mm thick panel material. The edges and back will not be finished.

Wood is a natural product and subject to variation of color and graining. Slightly differences in color intensity and grain structure of the veneer are preserved as natural characteristics for this handmade finish and feature the furniture parts their unique charisma. It follows, therefore, that there will be differences between samples/images and the respective delivery of the wood items. Please also note that exposure to sunlight will lead to changes in color.

- **Vertical grain direction**
- **Finished carcass sides, open shelf units and L-profil grip DGL are also available in these veneers but the veneer processing will be unconnuous.**

For additions to a delivered kitchen, a reference sample from the first delivery must be is required prior production. Due to the handcrafted structure and characteristics of the surfaces there may be variations to the initial delivery. These possible variations to the reference sample do not constitute a reason for complaint.

It follows, therefore, that there will be differences between samples/images and the respective delivery of the wood items. Please also note that exposure to sunlight will lead to changes in color.

- Wood veneer grain will not be grain matched if vertical veneered.
- Shelves, finished carcass side panels, back panels are vertical veneered as standard, without groove shape.
- Side panel with front pattern see page Z33
- Handles/Drillings for handles are not available.
- Maximum frontpanel dimensions (HxW): 2345 x 950 mm / 806 x 1250 mm.

For additions to a delivered kitchen, a reference sample from the first delivery must be is required prior production. Due to the handcrafted structure and characteristics of the surfaces there may be variations to the initial delivery. These possible variations to the reference sample do not constitute a reason for complaint.

Oiled real wood surfaces

Oiled real wood surfaces are more susceptible to moisture than lacquered wood finishes. Standing liquids can penetrate the wood and cause stains. Make sure to wipe up any spills immediately and use trivets for horizontal applications to minimize the effects of moisture.

Regular care of your oiled real wood surfaces is crucial, to preserve their beauty and durability. Inspect the wood regularly for damage and, if necessary, carry out the maintenance care according to our care instructions.

UNIQUE®

By the system unique eggersmann is designing, developing and manufacturing a collection of kitchens and interior decorations which can hardly be matched for its timelessness and minimalism.

The name unique really says it all.

The focus is on individuality and also exceptional and exclusive materials.

The fundamental idea of this system is the homogeneity of all visible surfaces.

Front and side panels as well as grip channels, plinth panels and worktops are made of just one identical material. Cutting-edge details such as 45° beveled edges/joints apply to fronts, side panels and worktops. In addition to various types of natural stone, solid stainless steel with different finishes as well as Fenix NTM can be used.

Nature cannot be standardized

We deliberately use many natural materials in our system unique but, although all our materials conform to the same high standard, no natural stone slab is completely flawless, nor are any two slabs exactly alike.

Therefore, kindly note the following information:

The structure of valuable natural stone surfaces includes characteristics of authenticity, which, in their diversity, do not occur altogether on a small stone sample. In the case of natural stones, strong veins, fine cracks, air pores, mineral inclusions etc. are preserved as characteristics for "real stone". Such variations must be taken for what they are: that is, not faults but proof that real stone slabs have been used. Many slabs are required for a unique kitchen and, within each of those slabs, there are varying degrees of structure, color and veining. This makes the uniform color and structure processing extremely difficult and can lead to the typical appearance of natural stone: partial structural deviations and/or color variations, which, however, underline the naturalness.

Planning guidelines:

- Single front panels for drawers, pullouts are available up to a maximum width of 1000 mm (except for Fenix core up to 1200 mm).
The maximum height for front panels is 500 mm.
- Doors can be offered in natural stone and Fenix core up to a maximum height of 846 mm and a maximum width of 596 mm.
- The standard carcass depth for base units is 625 mm.
385-625 mm is available without surcharge.
- As of a cabinet depth of 478 mm, drawers and pull-outs are supplied with heavy-duty runners (70 kg load capacity incl. front). No heavy-duty runners are available for all cabinet depths <475 mm (40 kg load capacity incl. front).
The correspondingly lower maximum load capacity must be taken into account during design.
- Special equipment, special production features and accessories (e.g. Boxtec inserts, interior lighting etc.) are required to be added from our current main price list E4.
- Due to possible dimensional tolerances of the unique material we recommend to design and order the worktops for unique kitchens with a reasonable oversize.

Nero Assoluto honed

Material: Granite

Granite is a primordial or deep-seated rock which was formed when the earth's crust cooled between 500 and 800 million years ago.

- Granite is characterized by its **hardness** and it is **scratch-resistant, acid-resistant, heat-resistant** and **easy to clean** when following the clean and care instructions.
- **Each Granite** features **different surface condition** and **air pores** as well as the **different gloss level and color** of contained minerals make each natural stone kitchen **unique**.
- **Variations in the color, structure and open-cell character of natural stones are unavoidable.**
- Natural stone front panels are not processed vein-matched as standard. Vein-matching front processing can be considered on request, with respect to the overall dimensions of the unique island and the available stone slab size.

Grigio Carnico leather

Material: Limestone

Limestone is a sedimentary stone of biogenic origin. Limestone products are sandblasted and treated with diamond brushes.

- Veins, cracks and open sections are **considered typical for Limestone** surfaces.
- The **structural capability** of Limestone may be weakened by the **naturally occurring veins and cracks**. Therefore **improper handling and shocks during transport** can lead to **breakage** of fronts, side panels and worktops.
- Limestone is **NOT resistant to acids**.
- **All liquids occurring in the household such as fruit acids, vinegar, wine, water, etc.**, as well as **fats and oils leave marks in the Limestone and have to be removed immediately from the surface**.
- **The marks at the surface** that contains due to regular usage are **unavoidable** and give the Limestone its **distinctive character**.
- **Variations in the color, structure and open-cell character of natural stones are unavoidable**.
- **These sensitivities of the Limestone must be specifically explained to the end customer and the acceptance and agreement of the customer must be documented in writing**.
- Natural stone front panels are not processed vein-matched as standard. Vein-matching front processing can be considered on request, with respect to the overall dimensions of the unique island and the available stone slab size.

Arabescato polished

Material: Marble

Marble is formed by the metamorphic transformation of limestone, dolomite and other carbonate rocks under the influence of high pressure and high temperature in the core of the earth. Marble is sandblasted and treated with diamond brushes.

- Veins, cracks and open sections are **considered typical for Marble** surfaces.
- The **structural capability** of Marble may be weakened by the **naturally occurring veins and cracks**. Therefore **improper handling and shocks during transport** can lead to **breakage** of fronts, side panels and worktops.
- Marble is **NOT resistant to acids**.
- **All liquids occurring in the household such as fruit acids, vinegar, wine, water, etc.**, as well as **fats and oils leave marks in the Marble and have to be removed immediately from the surface**.
- **The marks at the surface** that contains due to regular usage are **unavoidable** and give the Marble its **distinctive character**.
- **Variations in the color, structure and open-cell character of natural stones are unavoidable**.
- **These sensitivities of the Marble must be specifically explained to the end customer and the acceptance and agreement of the customer must be documented in writing**.

Tauern Green polished

Material: Serpentinite

Serpentinite is a metamorphic rock that has been formed from original effusive rock under the influence of high pressure in the upper mantle of the earth.

- The material has a high inherent stability due to its **slaty basic structure**.
- Because of the **variations in color, veins and structures** of the stone the gloss level of the **polished surface may vary**. This is a typical characteristic and gives the Serpentinite stone its **distinctive character**.
- **Variations in the color, structure and open-cell character of natural stones are unavoidable**.
- Natural stone front panels are not processed vein-matched as standard. Vein-matching front processing can be considered on request, with respect to the overall dimensions of the unique island and the available stone slab size.

Stainless steel silverTouch

Solid stainless steel – worktop and panels are 5 mm thick and front panels are 3 mm thick - in 1.4301 (V2A). The silverTouch slabs are hot-rolled and this process creates, in conjunction with atmospheric oxygen during the cool-down process, a surface that is characterized by very good scratch resistance and low sensitivity. These effects are additionally supported by the hand applied silverTouch grinding surface. Caused by the production process silverTouch may have rolling marks, inclusions, and other imperfections! This is not a manufacturing fault but characteristics of the material.

908 Stainless Steel silverTouch

- max. size for slabs: 4500 x 1480 mm
- Material thickness: 3 mm frontpanels / 5 mm side panels and worktops
- Material weight: 3 mm thickness: / 24 kg per sqm
5 mm thickness: / 40 kg per sqm

Hot-rolled stainless steel

The stainless steel is hot rolled in glowing condition and, in combination with atmospheric oxygen, forms a very individual surface when it cools. The surface appears warm and harmonious and yet proves to be robust, insensitive and easy to clean. Surface irregularities and rolling marks are characteristic of this material and do not represent any manufacturing defects.

8917 Hot-rolled stainless steel

- max. size for slabs: 5200 x 1900 mm
- Material thickness: 3 mm frontpanels / 5 mm side panels and worktops
- Material weight: 3 mm thickness: / 24 kg per sqm
5 mm thickness: / 40 kg per sqm

Brass

Solid Brushed Brass – 3 mm thick, waxed finish.

Due to the material properties of brass, the surface may show flowmarks, small scratches or similar irregularities. In addition, brass oxidizes very easily and quickly in conjunction with atmospheric oxygen. Brass reacts with ambient oxygen. This causes an oxide layer. As a result, this mentioned effect can be partially intensified, e.g. by hand perspiration or similar. Stains are formed, e.g. as fingerprints. This is a natural characteristic of the material and has to be accepted.

8911 Brushed Brass

- max. size for slabs: 3900 x 1400 mm
- Material thickness: 3 mm / 5 mm
- Material weight: 3 mm 26 kg per sqm
5 mm 43 kg per sqm
- Brushing direction: horizontal
- Side panels in Brushed Brass see page u67 and u100 
- Due to the described material properties, real brass is not recommended as worktop material.

8912 Eccentric grinding Brass

Bronzed Brass

8914 Bronzed Brass

- max. size for slabs: 3900 x 1400 mm
- Material thickness: 3 mm / 5 mm
- Material weight: 3 mm 26 kg per sqm
5 mm 43 kg per sqm
- Brushing direction: horizontal
- Side panels in Brushed Brass see page u67 and u100 
- Due to the described material properties, real brass is not recommended as worktop material.

Black steel, waxed

Our black steel waxed is not stainless steel, but structural steel.

The most common types of structural steel fall into the basic steel category. They are mostly low-alloyed and only partially heat-treated.

Due to the manufacturing process, imperfections and color differences in the surface are unavoidable. Pores, marks, slight scratches and discoloration are characteristics of black steel and must be accepted.

Black steel is a material that reacts with its environment, so rust stains can occur in conjunction with acidic substances, among other things. In general, products made of black steel must not be exposed to acidic media, otherwise rust may form.

7071 Black steel, waxed

- max. size for slabs: 3900 x 1400 mm
- Material thickness: 3 mm frontpanels / 5 mm side panels and worktops
- Material weight: 3 mm thickness: / 24 kg per sqm
5 mm thickness: / 40 kg per sqm
- Black steel, waxed worktops, side panels and shelves
see page u67 and u100 

Black touch stainless steel

An ultra-thin ceramic is fired onto the stainless steel with an infrared laser using a specially developed process.

The layer, which is only a few micrometers thick, retains the desired properties of the stainless steel. The hardness of the ceramic layer results in a very scratch-resistant surface on the stainless steel. Thus, the stainless steel black touch combines the positive properties of stainless steel with the positive properties of a ceramic.

The 3 mm thick fronts are lined on the back with laser welding lines at a distance of approx. 3 mm and provided with a swirl finish.

8915 Black touch stainless steel

- max. size for slabs: 4050 x 1420 mm
- max. size for front: 500 x 1196 mm
- Material thickness: 3 mm frontpanels
8 mm side panels
8 mm worktops
- Material weight: 3 mm thickness: / 26 kg per sqm
8 mm thickness: / 42 kg per sqm
