For information concerning Condition of Sales, Warranty, Fabric, Finishes, etc., please download the *Conditions of Sales.pdf* on the Davis web site: www.davisfurniture.com

FEATURES

Legs and Frame

Constructed of extruded and die cast aluminum components. Straight sections of the frame are produced from extruded aluminum profiles. Corner components are produced from die cast aluminum, engineered to join adjacent extrusions at each frame junction and support the steel leg.

Extruded and die cast members are mechanically joined to form a rigid fastened perimeter structure to support the seating components.

Available in all Davis powder coat finishes.

Frame

Powder coated aluminum

Glides

Bases come standard with adjustable black plastic glides

Optional felt adjustable glide are available - **JPB-Felt** - no upcharge if specified at time of order

Ganging

Ganging brackets provided when configuration requires. Ganging locations will be indicated on the drawings at time of quote and order.

Seat Units

Offered in three seating configurations: backless, with back, and with back and arm. All configurations share a common construction method and may be combined in continuous runs along a single frame.

Seat and back components are built on engineered plywood frames, precision-cut and assembled to form the structural shell of each seating element. The seat frame incorporates a cut-out opening, across which sheet webbing is stretched and secured to create a resilient suspension system. The webbing provides uniform support across the seating surface and works in conjunction with the foam layers to establish the bench's comfort.

Foam is a multi-density construction, combining firmer foam for structural support and softer foam for surface comfort. The foam layers are profiled and laminated to the plywood frame and webbing suspension to produce a consistent seating surface across the length of the bench, regardless of configuration.

Back and arm components are constructed using the same engineered plywood frame method as the seat, with foam layered and profiled to the back and arm geometry to maintain continuity in appearance and comfort between elements.

All benches are fully upholstered at the factory and ship fully assembled.

Tablet Arms

Seating elements are notched to accept tablet support post which is welded to frame. Cannot be installed in the field.

Pivoting Tablet – Offered in veneer, and 12mm solid core FENIX® in Bianco Kos, Blu Fes, Grigio Efeso, and Nero Ingo.

Table Top

Offered in veneer, and 12mm solid core FENIX® in Bianco Kos, Blu Fes, Grigio Efeso, and Nero Ingo.

Power

Two power or one power, two charging USB units are available.

Power units come in black or white and are designed for under frame placement.

Power units are adjustable on frame. Contact factory to discuss initial placement

A "J" tray is mounted on the back rails and is used for horizontal wire management.

The Interlink iQ system is available for linking power units together. Contact factory for additional information.

Upholstery

Upholstery detailing includes welting around the perimeter of the seat, and double-needle topstitching around the perimeters of the back and arms. Additional double-needle topstitching across the seat visually delineates individual seating positions.

Available in approved fabrics and leathers from the Davis Fabric and Leather Program or in COM/COL. For approved materials, visit www.davisfurniture.com/fabric-approval
