

## Wilshire Premier+ Allocation Portfolios

As of March 31, 2026

### Wilshire Premier+ Allocation Portfolios

The Wilshire Premier+ Allocation Portfolios are a series of six risk-optimized, multi-asset class, multi-manager funds of Wilshire Mutual Funds, Inc., designed to leverage the asset allocation, manager research and portfolio construction expertise of Wilshire.

### Wilshire Mutual Funds Subadvisers:

**ALGER**

**DIAMOND HILL**  
INVESTED IN THE LONG RUN

**LAZARD**

**Manulife Investment Management**

Logos are protected trademarks of their respective owners and Wilshire disclaims any association with them and any rights associated with such trademarks.

### Product Description

- Institutional investment managers** – Portfolios are anchored by the Wilshire Mutual Funds, which are subadvised by third-party institutional asset managers.
- No strategist fee** – Wilshire doesn't charge a strategist fee. Wilshire is the sponsor and the investment adviser of the Wilshire Mutual Funds (the "Funds") and receives advisory fees based on a percentage of the assets in the Funds.
- Dynamic management** – Wilshire dynamically tilts the Portfolios, emphasizing assets and strategies that appear to be attractive and undervalued and de-emphasizing assets and strategies that do not.
- Risk-based, multi-asset class portfolios** – Wilshire develops forward-looking, strategic forecasts based on proprietary institutional data to determine the asset allocation policy.
- Alternative investments** – The Portfolios offer varying allocations to alternative mutual funds that seek to enhance diversification beyond traditional stock and bond exposures. Wilshire has a long history of building portfolios with allocations to alternative investments intended to help investors improve diversification in a risk-appropriate manner.

## Information Regarding Performance Data

### Wilshire Premier+ Allocation Portfolios (Model)

The performance results above should be reviewed in the context of the markets applicable to the investment strategies noted. There are certain limitations in model performance as the model results will not completely represent the actual trading of securities in a client account. The results reflect reinvestment of all dividends and interest. All returns for periods greater than one year are annualized. Performance results reflect the deduction of the maximum Strategist Fee of 0.29%. Actual client results will be lower based on the imposition of platform fees, advisory fees, transaction fees and custodial fees by third party firms. Due to differences in share classes and platform restrictions preventing the use of some securities, such as exchange-traded funds, Wilshire's preferred allocation may not be available on all platforms. When a specific security or financial instrument is unavailable, Wilshire will use a substitute security that is suitable in the context of the portfolio's stated investment objective. As with all investments, there is no guarantee that the investment strategy will be successful and investors should be aware that investments can lose money, including principal, so that an investor could end up with less money than was invested. Past performance is not indicative of future results, and processes used may not achieve the desired results. It is not possible to invest directly in an index. Index returns do not reflect payment of certain sales charges or fees an investor may pay to purchase the securities underlying the index or investment vehicles intended to track the performance of the index. The imposition of these fees and charges would cause actual performance of the securities/vehicles to be lower than the index performance shown.

The framework discussed in this material is hypothetical and does not represent the investment performance or the actual accounts of any investors or any funds. The results achieved in our simulations do not guarantee future investment results. The model performance information in this material is based on the model performance of hypothetical investments over the time periods indicated.

It is possible that the markets will perform better or worse than shown in the projections; that the actual results of an investor who invests in the manner these projections suggest will be better or worse than the projections; and that an investor may lose money by investing in the manner the projections suggest.

Although the information contained herein has been obtained from sources believed to be reliable, its accuracy and completeness cannot be guaranteed. While the results reflect rigorous application of the investment strategy selected, it should not be considered indicative of future results. In particular, they do not reflect actual trading in an account, so there is no guarantee that an actual account would have achieved these results shown.

## Important Information

This material is for information purposes only. Wilshire is the sponsor and investment adviser of the Wilshire Mutual Funds and receives advisory fees based on a percentage of the assets in the Wilshire Mutual Funds.

**Investments in equities** are subject to market risk so that shares, when redeemed, may be worth more or less than their original cost. Security prices can fluctuate significantly in the short term or over extended periods of time. These price fluctuations may result from factors affecting individual companies, industries, or the securities market as a whole. **Investments in small cap stocks** may be subject to a higher degree of market risk than large cap stocks, or more established companies' securities. Furthermore, the illiquidity of the small cap market may adversely affect the value of an investment. **Investments in bonds** are subject to interest rate, inflation, credit, currency and sovereign risks. **Investments in high yield bonds**, often referred to as "junk bonds," are subject to greater credit risk and price fluctuations than higher quality issues. **Investments in international securities** involve additional risks including currency rate fluctuations, political and economic instability, differences in financial reporting standards, and less stringent regulation of securities markets. In addition, the **risks of investing in emerging market securities** are greater than those of investing in securities of developed foreign countries.

**Risks of investing in real estate securities** are similar to those associated with direct investments in real estate, including lack of liquidity, limited diversification, sensitivity to certain economic factors such as interest rate changes and market recessions, and falling property values due to increasing vacancies or declining rents resulting from economic, legal, political or technological developments. **An alternative investments strategy** is subject to a number of risks and is not suitable for all investors. Investing in alternative investments is only intended for experienced and sophisticated investors who are willing to bear the high economic risk associated with such an investment.

Model portfolios are exposed to the specific risks of the underlying funds in direct proportion to their percentage allocation. The funds comprising the models and the allocations to those funds have changed over time and may change in the future.
