CLARITY IS YOUR EDGE

WHO WE ARE

When national security, healthcare, or mission logistics get complicated, JDSAT delivers clarity. We fuse human insight with algorithmic precision to help organizations make faster, better-informed decisions—when the stakes are high, and the margin for error is low.

We work across defense, interagency, and health sectors to build decision ecosystems that thrive in uncertainty. Whether you're leading transformation inside government or solving tough problems as a prime, JDSAT is your edge in complexity.

TECHNICAL FOCUS

- Strategic analytical decision support
- Machine learning / artificial intelligence
- Process modeling and optimization
- Process modeling and optimization
- Modeling and simulation engineering

PAST PERFORMANCE

VFC – Navy Medicine: Delivered tools that enabled rapid risk identification and force readiness.

DHA - MedSentinel: Delivering edge-enabled C4IT to EXMED units for real-time medical data sync and readiness in denied, degraded, and austere environments.

Data Transformation – Navy: Advanced enterprise data maturity to support faster, integrated decision-making.

WHY AGENCIES CHOOSE JDSAT

- Trusted by defense, health, and interagency leaders
- Strategic and tactical delivery in one partner
- Proven in mission-critical environments
- Seamless integration of AI + operational expertise
- Veteran-led and CVE-certified SDVOSB

SPECIALIZED CAPABILITIES

Adaptive Decision-Centric Networks

Keep the data, and the mission, alive

ADCNs synchronize data, keep enterprise systems informed, and power operations at the tactical edge—even when links drop or enterprise networks are out of reach.

- Operates disconnected and auto-syncs on reconnect
- Ruggedized, vibration-tested hardware with DoDIN-compliant software
- Scales from 3-person teams to brigade; plugs into JOMIS

Contested Logistics

In disruption, insight decides

JDSAT fuses decision science and predictive analytics into field-ready dashboards, keeping supplies flowing under cyber, physical, or degraded conditions.

- Real-time data fusion for end-to-end visibility
- Scenario-driven stress tests to preempt disruptions
- Adaptive resupply routes in denied environments

Wargaming

Delivering decision advantage under pressure

Stress-test decisions under pressure using mission-aligned simulations that expose risk, reveal coordination gaps, and accelerate insight across operational, technical, and leadership dimensions.

- Stress-test decisions under operational tempo and uncertainty
- Model logistics, kill web resilience, and capability integration
- Rapidly refine concepts and validate innovation before investment

JDSAT

CVE-Certified
SDVOSB

BETTER OUTCOMES.

CLEARER DECISIONS.

From contested environments to complex enterprise operations, JDSAT combines human expertise and cutting-edge analytics that help you act decisively in the moments that matter most.

HOW WE DELIVER

Whether you're a federal agency or a prime integrator, we move fast, integrate cleanly, and deliver results without the drag of overhead.

- Cross-functional delivery teams built for mission tempo, not bureaucracy
- Embedded advisory model allows us to plug into client environments or teaming structures seamlessly
- Rapid execution, low overhead, and high impact; structured delivery rhythms
- JDSAT's Solution Accelerator moves ideas from prototype to mission use

CLIENTS

PARTNERS

MISSION LEADERS & ANALYSTS CALL JDSAT WHEN THEY'RE FACING:

When federal teams call JDSAT, it's usually because something is stuck—or at risk. We specialize in surfacing what matters, simplifying the noise, and operationalizing the tools that move the mission forward.

Your Challenge	How We Help
Fragmented decision-making across domains	Integrated, AI-enhanced ecosystems for speed, structure, and alignment
Data-rich, insight-poor operations	Analytics pipelines that translate complexity into action
Reactive posture limiting strategic planning	Wargaming and simulation to shift from reaction to readiness
Logistics gaps in denied or dynamic environments	Predictive sustainment tools and real-time resilience modeling
Overwhelmed analysts, unclear priorities	Decision frameworks that streamline workflow and sharpen focus
