The 2026 Midterms:
What Voters Told Us

Survey Crosstabs

November 2026

METHODOLOGY

This poll surveyed 1,001 likely voters via online panel from November 8, 2026 to November 12, 2026. Results were weighted by 2026 vote recall, 2024 vote recall, age, gender, race, region, education, and income to match population demographics. The margin of error is ±4.0 percentage points at the 95% confidence level.

READING THE TABLES

Each question shows two banners: demographics, income and party on top; 2024 vote, ideology, 2026 vote and AI use below. Long tables run the second banner on the following page. Figures are column percentages, and the All column is shaded. Some questions were asked of a subset of respondents, such as 2026 voters or likely primary voters; the group and its size are shown under the question. The sample is weighted to 2026 vote recall, so the House vote (Q18 to Q20) matches the result by design. Smwt. means somewhat; Other/DNV means another candidate or did not vote; AI Use is how often respondents use AI tools.

Q17

Some states require people who vote by mail to include an ID number, such as a driver's license number or the last four digits of their Social Security number, or a copy of a photo ID with their ballot.

Would you support or oppose requiring this in your state?

		GENDER		AGE				RACE				EDUCATION		INCOME			PARTY ID
