

Your vet has prescribed RheumaCox for your dog

RheumaCox is a tasty Hickory Smoke flavoured tablet that helps manage your dog's pain

- Can be used after surgery, or for dogs with osteoarthritis (OA)
- Contains **firocoxib**, a nonsteroidal anti-inflammatory drug (NSAID)
- Can be given **with or without food**
- Available in breakable tablets for accurate dosing

Your dog needs _____ tablets

once daily for _____ days

It is important to follow your vet's recommendations. RheumaCox needs to be given at the correct dose for the advised length of time.

Side effects – what to watch for

Most dogs tolerate RheumaCox well, but stomach upsets (vomiting or diarrhoea) can occasionally occur. If this happens, stop treatment immediately and contact your vet.

Long-term use may require monitoring (e.g. blood tests) to check your dog's health. Your vet will advise on this.

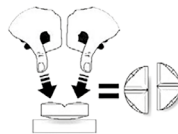

RHEUMACOX

How to break RheumaCox tablets

Easy to break tablets for a precise dose

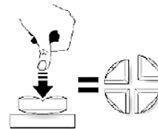

Place the tablet on a flat surface with the scored side facing up and the rounded side facing down.

To split into halves (2 parts):

Press your thumbs on both sides of the tablet.

To split into quarters (4 parts):

Press your thumbs on both sides of the halved tablet. Press the centre of the tablet.

Prescription decisions are for the person issuing the prescription alone. REFERENCES: 1. Osteoarthritis (OA)

If your dog has OA, you're not alone:
up to 40% of dogs show some signs
of the disease¹

OA is a joint disease that causes pain, inflammation and degenerative changes to joint structures. It's more often seen in older animals, but younger dogs can also potentially be affected.¹

There is currently no cure for OA and as it is a progressive condition it will worsen over time, but thankfully there are lots of things you can do to keep your dog doing what they love!

The best results come from a **multimodal approach** — combining medication with lifestyle changes and supportive care.

Ongoing monitoring

Because OA is progressive, it's important to keep an eye on your dog's comfort and mobility

LOOK OUT FOR CHANGES SUCH AS:

- Slowing down on walks
- Stiffness after resting
- Hesitation on stairs or jumping up
- Mood or behaviour changes

Your dog will need regular vet check-ups so their care plan can be updated as needed.

Here's your dog's plan:

Weight management

Current weight:

Target weight:

Supportive therapy *e.g. physiotherapy*

Exercise modification

Other *(e.g. surgery)*

Diet recommendations *(including supplements)*

At home modifications *(e.g. avoid steps)*
